Subject: Objection to Aquind interconnector project, Milton to Lovedean, Hampshire
Date: 05 October 2020 23:29:40

Dear sir/madam
I object to the proposed plan to lay a new pipeline from France going through Milton to Lovedean. The work will destroy protected habitats and nature reserves, compromising protected and endangered species, eg Farlington marshes, Milton Common, Salterns Heath, Langstone Harbour. It will also destroy one of our cities allotments, a much sought after amenity, treasured by all generations for growing food, outdoor exercise whilst gardening. The allotment also supports an abundance of wildlife and provides a much needed green space in one of the countries most densely populated cities. The losses for the citizens and the wildlife along the entire proposed path of the pipeline is significant in comparison to the speculated minor gains from the project.

I request you consider alternative, more efficient plans for obtaining energy and plans that pose less risk to rare and valuable green spaces essential to humans and wildlife

Yours faithfully

Ruth Ancsell, resident of Milton, Portsmouth
