Subject: Objection to Aquind
Date: 05 October 2020 10:37:14

Dear Sirs

I wish to register my objection to the proposed Aquind project. The grounds for my objection are:

1. The need for the project has not been demonstrated. The UK has managed its electricity generation and distribution satisfactorily for over a century, and there is no overriding need to link to Continental sources. If a problem of inadequate supply in the future is anticipated, then additional capacity should be created using renewable sources.
2. If nevertheless it is decided that the project must proceed, it is incomprehensible that the chosen route for the cable should be through a densely populated and built up area, with all the disruption this would cause - let alone through a Site of Special Scientific Interest (SSSI) and Ramsar site. The choice of linking substation and/or the route to the substation should be reconsidered. In any case the landfall of any cable should be a sparsely populated area with no or negligible impact on wildlife, natural beauty, archaeology or recreational facilities.

Please take these objections into account when reaching your decision.

Yours faithfully

Robin Paice, FRTPI (Ret'd)
