I would like to raise an objection to the proposed interconnector cable from Eastney on the following grounds:
The disruption it will cause to local traffic.
The health implications from the disruption by all the digging of trenches.
This is a very heavily populated area. One of the highest densities in the country.
Do we really need to import electricity from elsewhere? I like many others' plan when they can afford to switch to producing their own energy from solar, air pumps etc.
Thank you for reading this
