To Whom it may concern
There are 5 generations of my family living in Portsmouth , the city I have lived in all my life . [redacted] and my 2 youngest children attend local schools. We are one of the most highly populated cities in the country over 200 thousand people sharing just 15sq miles on our little island .
It was bought to my attention 5/10/2020 of Aquind are proposing an electric cable run through our island from France . This is I assume part of a long winded brexit deal . Correct me if I am wrong . As a patron of Milton allotments I was astounded to only have discovered this info with just 2 day's to object (which I have) . The plans are confusing as government stated 7/10/20 the uk will be investing in UK eco friendly wind/ solar energy . So I again explore you to advice me of the actual plans and take into account , my views . We only have a small amount of un spoilt land left in our island . The natural habitat is a breeding ground for wildlife . After a busy day at work my respite is to visit my allotment with my children and grow our own organic fruits and veg . This is I appreciate probably not important to you however please take note of the only green spaces we have left . We are already confined with too many carbo émissions from the traffic on our tiny island we simply do not and cannot welcome your proposals the future of our children and grandchildren is far more important than these cables running under / over or around our island . Why are we not investing in wind and solar power ?
I'm anticipation
Alison Henry
