Hi

Please rethink this. This is our beautiful beach. It's so busy in the summer our Rds are gridlocked so if you come it will not be good for our traffic, local economy, environment.

The line of best fit in your map is not the best place.

Look around the area there will be unused areas that you can place the connector without disruption. Why not join it straight towards the motorway and avoid this area completely.

Please reconsider the impact on our homes and family lives. My boys are [redacted] and [redacted] children enjoy the beach here.

Thank you
Claire

Dear Secretary of State

Please don't land your site in Eastney beach.

It's a huge tourist area, after Covid our economy and people need to live normally again.

It's gridlocked anyhow spring to summer. Diggers and the like will close our infrastructure down. We are an inlet.

It's protected the breach has rare flora and fauna
It's a site where they are regenerating the oyster beds
My family love where we live
We have little green space and it will kill Milton! That's the road in!

Thank you
Claire.

Dear Clive/sirs

I wanted you to see the map of where the interconnector from France will land.

A). The red line in the numbered boxes is the planned route through beach,homes and green space "allotments".

B) I've drawn along side in a thick red line, this is still in the sea. Where it ends and goes right at the top is motorway. The M27 and then the A3 towards Lovedean. They are working on sea defence there already.

The motorway travels in the direction of Lovedean so it could have been put on a route with no disruption alongside the already existing Rds. Not through a tourist area, homes and green space. if they'd planned and take into the account our community and quality of life. It just feels like someone took out a map and found a short line that was the best fit! But it's not.

Many thanks
Claire
