We would like to ask for the application by EDF to increase the size of the waste storage to be turned down. We consider the application should not be agreed as a non material change for the following reasons.

The large increase in size of the storage. We were informed at the very short presentation that there was not anticipated to be an increase in the waste estimated in the original plan. Why increase the size then?

We wondered why the change from wet to dry storage. We were told it was not any difference in the safety of the storage but it was just the way to go. Why change then?

This application will mean a redesign of some buildings, erection of additional pipe work to enable discharges from the site and alterations to the sea wall.

We also feel the notice given to discuss and consider this application was just eight working days and fifteen minutes before the Parish Council meeting. Not long enough for such an important subject.

We feel this should be a material change and not a non material change. This would give more time for consideration and discussion for something that will be in our community for well over a hundred years.

Thank you

Graham and Jean Howard
