Dear Sirs,

RE: APPLICATION FOR NON-MATERIAL CHANGE TO THE
HINCKLEY POINT C (NUCLEAR GENERATING STATION) ORDER
2013.

I write in protest to the above application, whilst some
of the proposals seem relatively minor, Jetty Pipework,
seawall re-alignment, sitting changes of proposed
buildings, the major complaint is of the environmental
impact not only to the local “nailhorser” fisherman and
his fish stock but also to the Interim Fuel Store (H.H.K.)
doubling of size (footprint) and the proposed raising of the
roof height by 5 metres plus. This will have a major
impact on the landscape and will be permanent for at
least a thousand years. Hidden in the application is a
change of usage from "wet storage" to "dry storage" with
the contaminated by-product contained in concrete casings
and un movable for hundreds of generations.

The Interim Spent Fuel Store (H.H.K.) presents a safety
hazard, a security danger and an eyesore on the
southern coast of the Bristol Channel with its
contents degenerating (concrete has only a life span of
75 years plus). The building will become the home of energy particles emitted by substances whose atoms are not stable and spontaneously decaying.

In summary, the EDF ENERGY, HPC, CWCN, submission to NPC planning application is a significant alteration to the original proposal and will leave a "monumental Tombstone" as an edifice to challenge the Nile pyramids in age but not in Apanity.

yours faithfully

EDWARD A. HEATH.
