**Subject:** RE: Hinkley Point C Nuclear Power Station - Consultation on an amendment to the current DCO Non-Material Change application

Good afternoon John,

Thank you for formally notifying me about EDF's proposed amendment to the current DCO Non-Material Change application. I have now had the opportunity to read through your letter and its accompanying information. I can confirm that the information you have copied to me today does follow the detail that we discussed when we met virtually in May. On this basis, I can confirm that your current proposed amendment is acceptable to me from a planning perspective and hence, I will not be objecting to this proposed amendment to the current DCO Non-Material Change application. I do not intend to write to the Secretary of State to tell him of this, but please feel free to copy him into this e-mail if that helps your case.

I will just add, that all of my previous comments submitted to the Secretary of State originally as part of the current DCO Non-Material Change application (NMC-4), still stand and are in no way affected by my decision not to raise any comments on your proposal to amend this application.

Regards,

John Burton  
Specialist (Hinkley Point C New Nuclear Build and other Nationally Significant Infrastructure Projects)  
Somerset West and Taunton Council
