

The Sizewell C Project

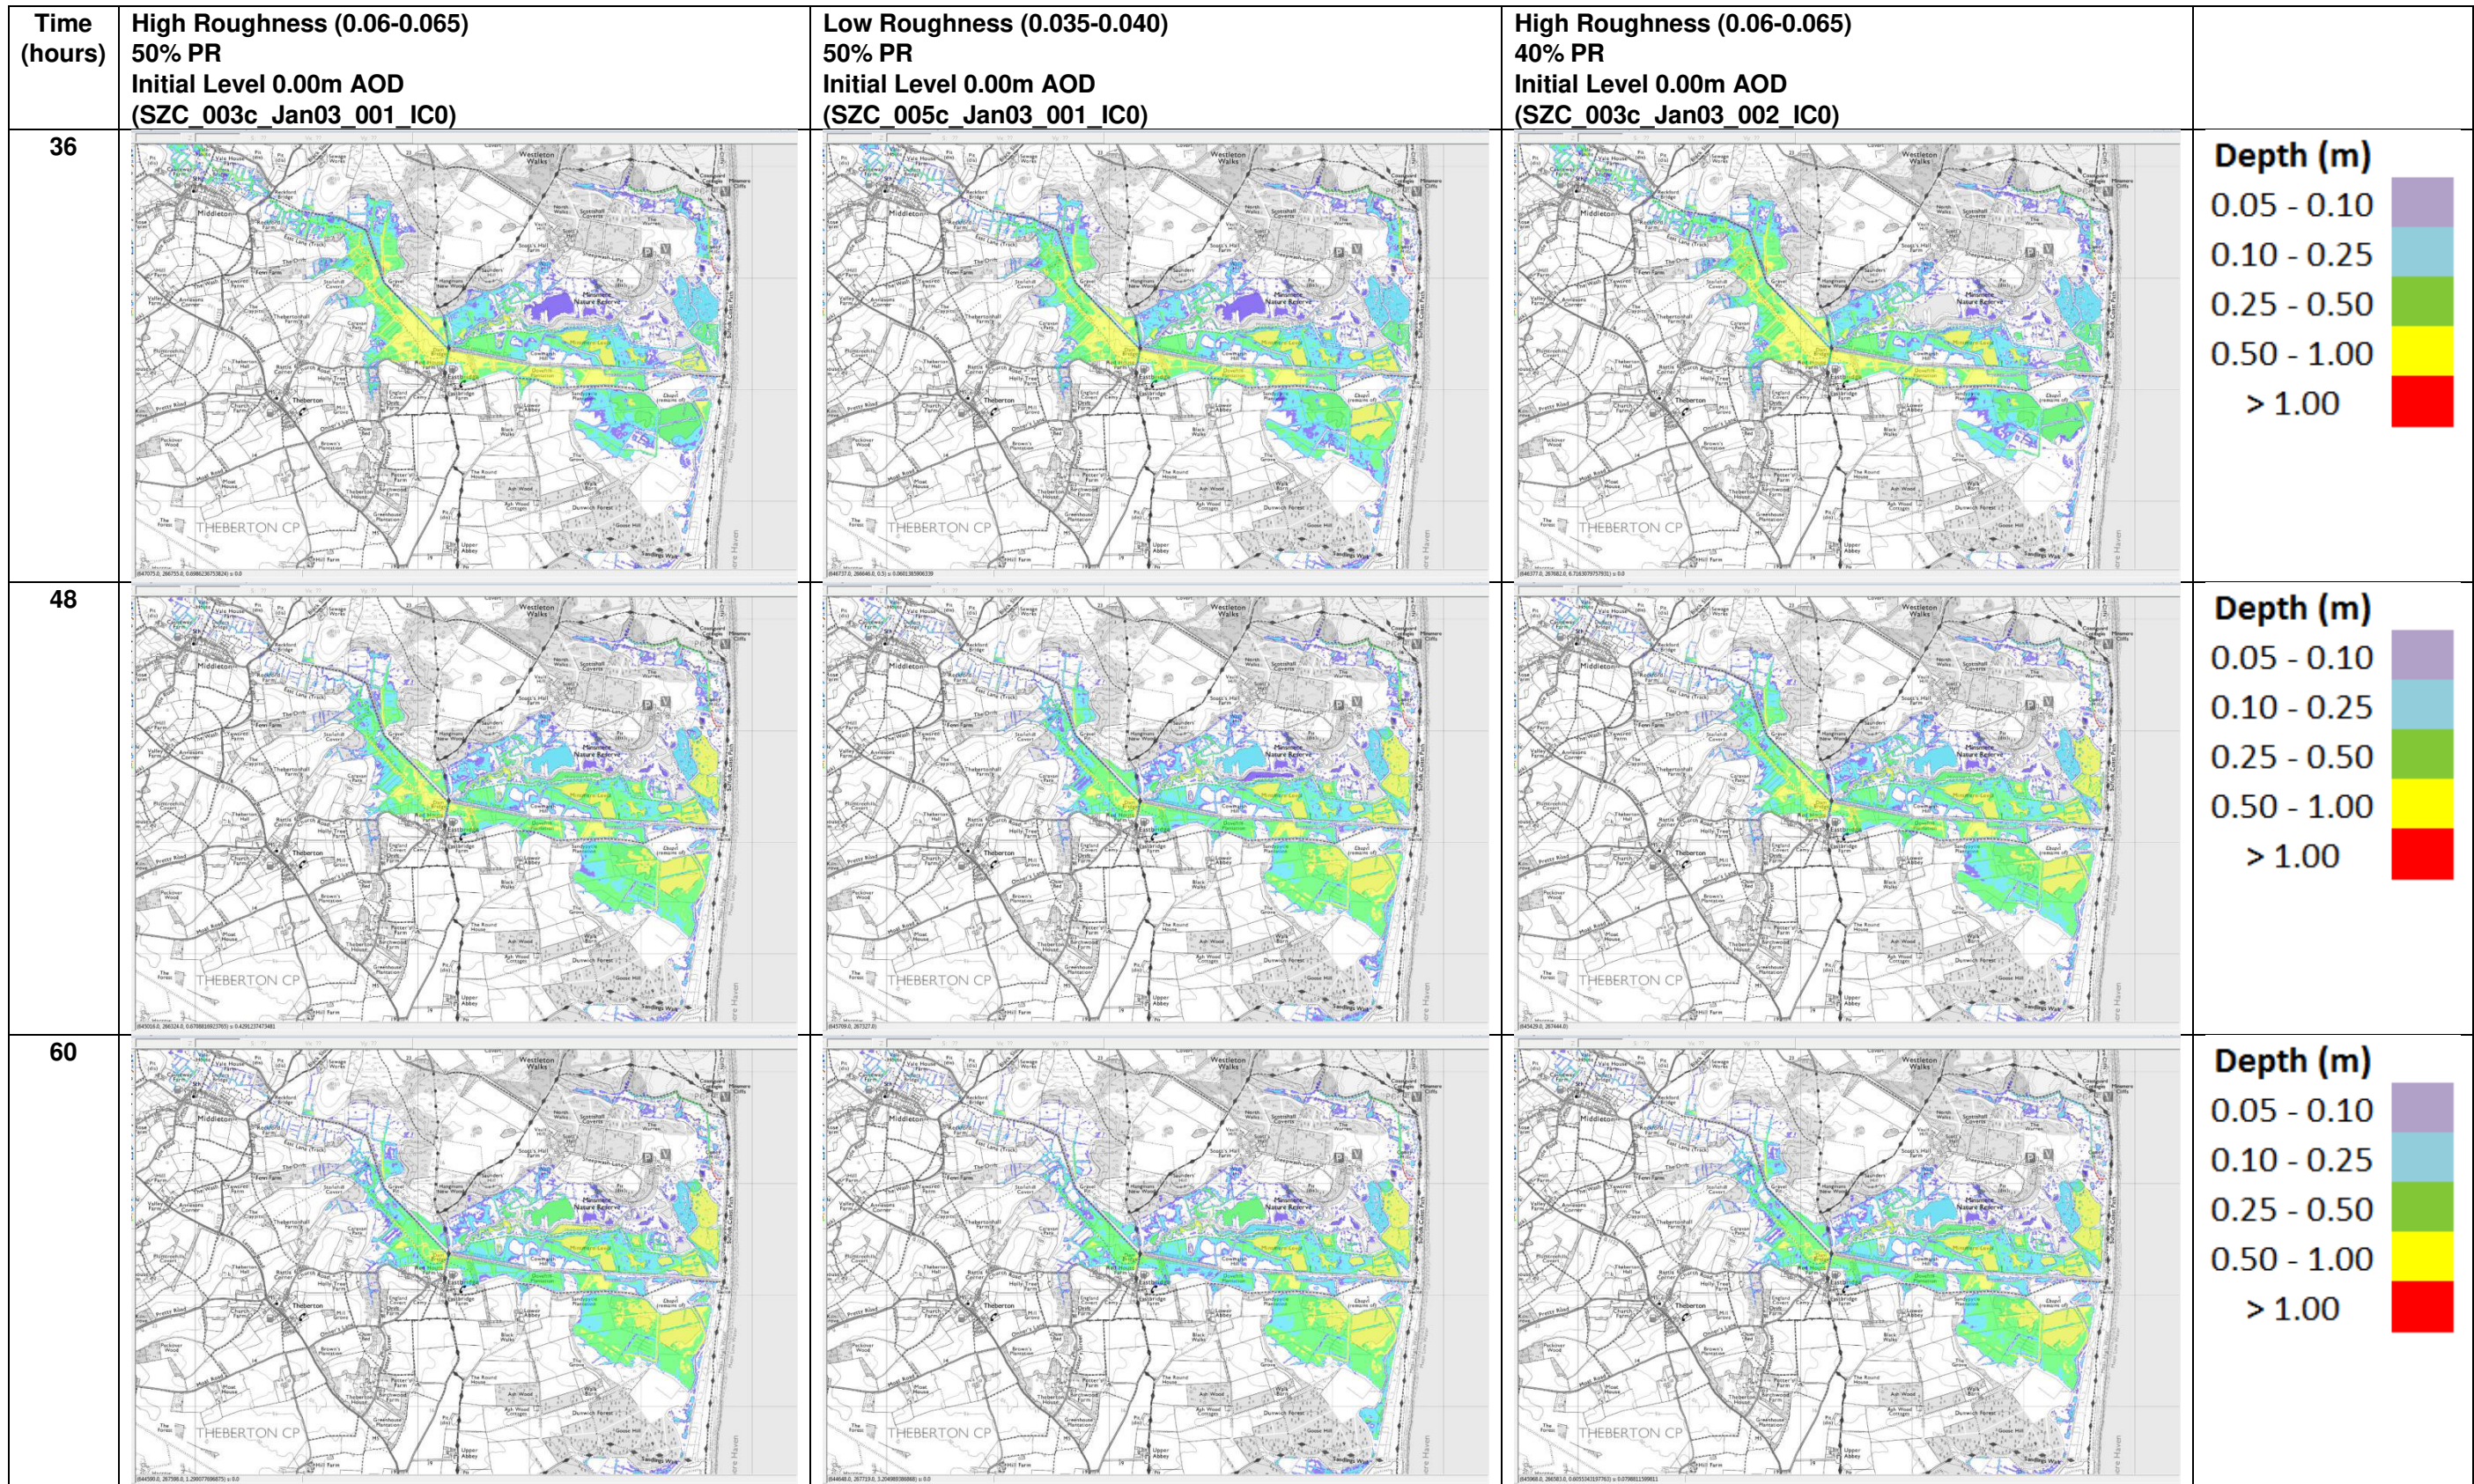

5.2 Main Development Site Flood Risk Assessment Appendices 1-7 Part 2 of 14

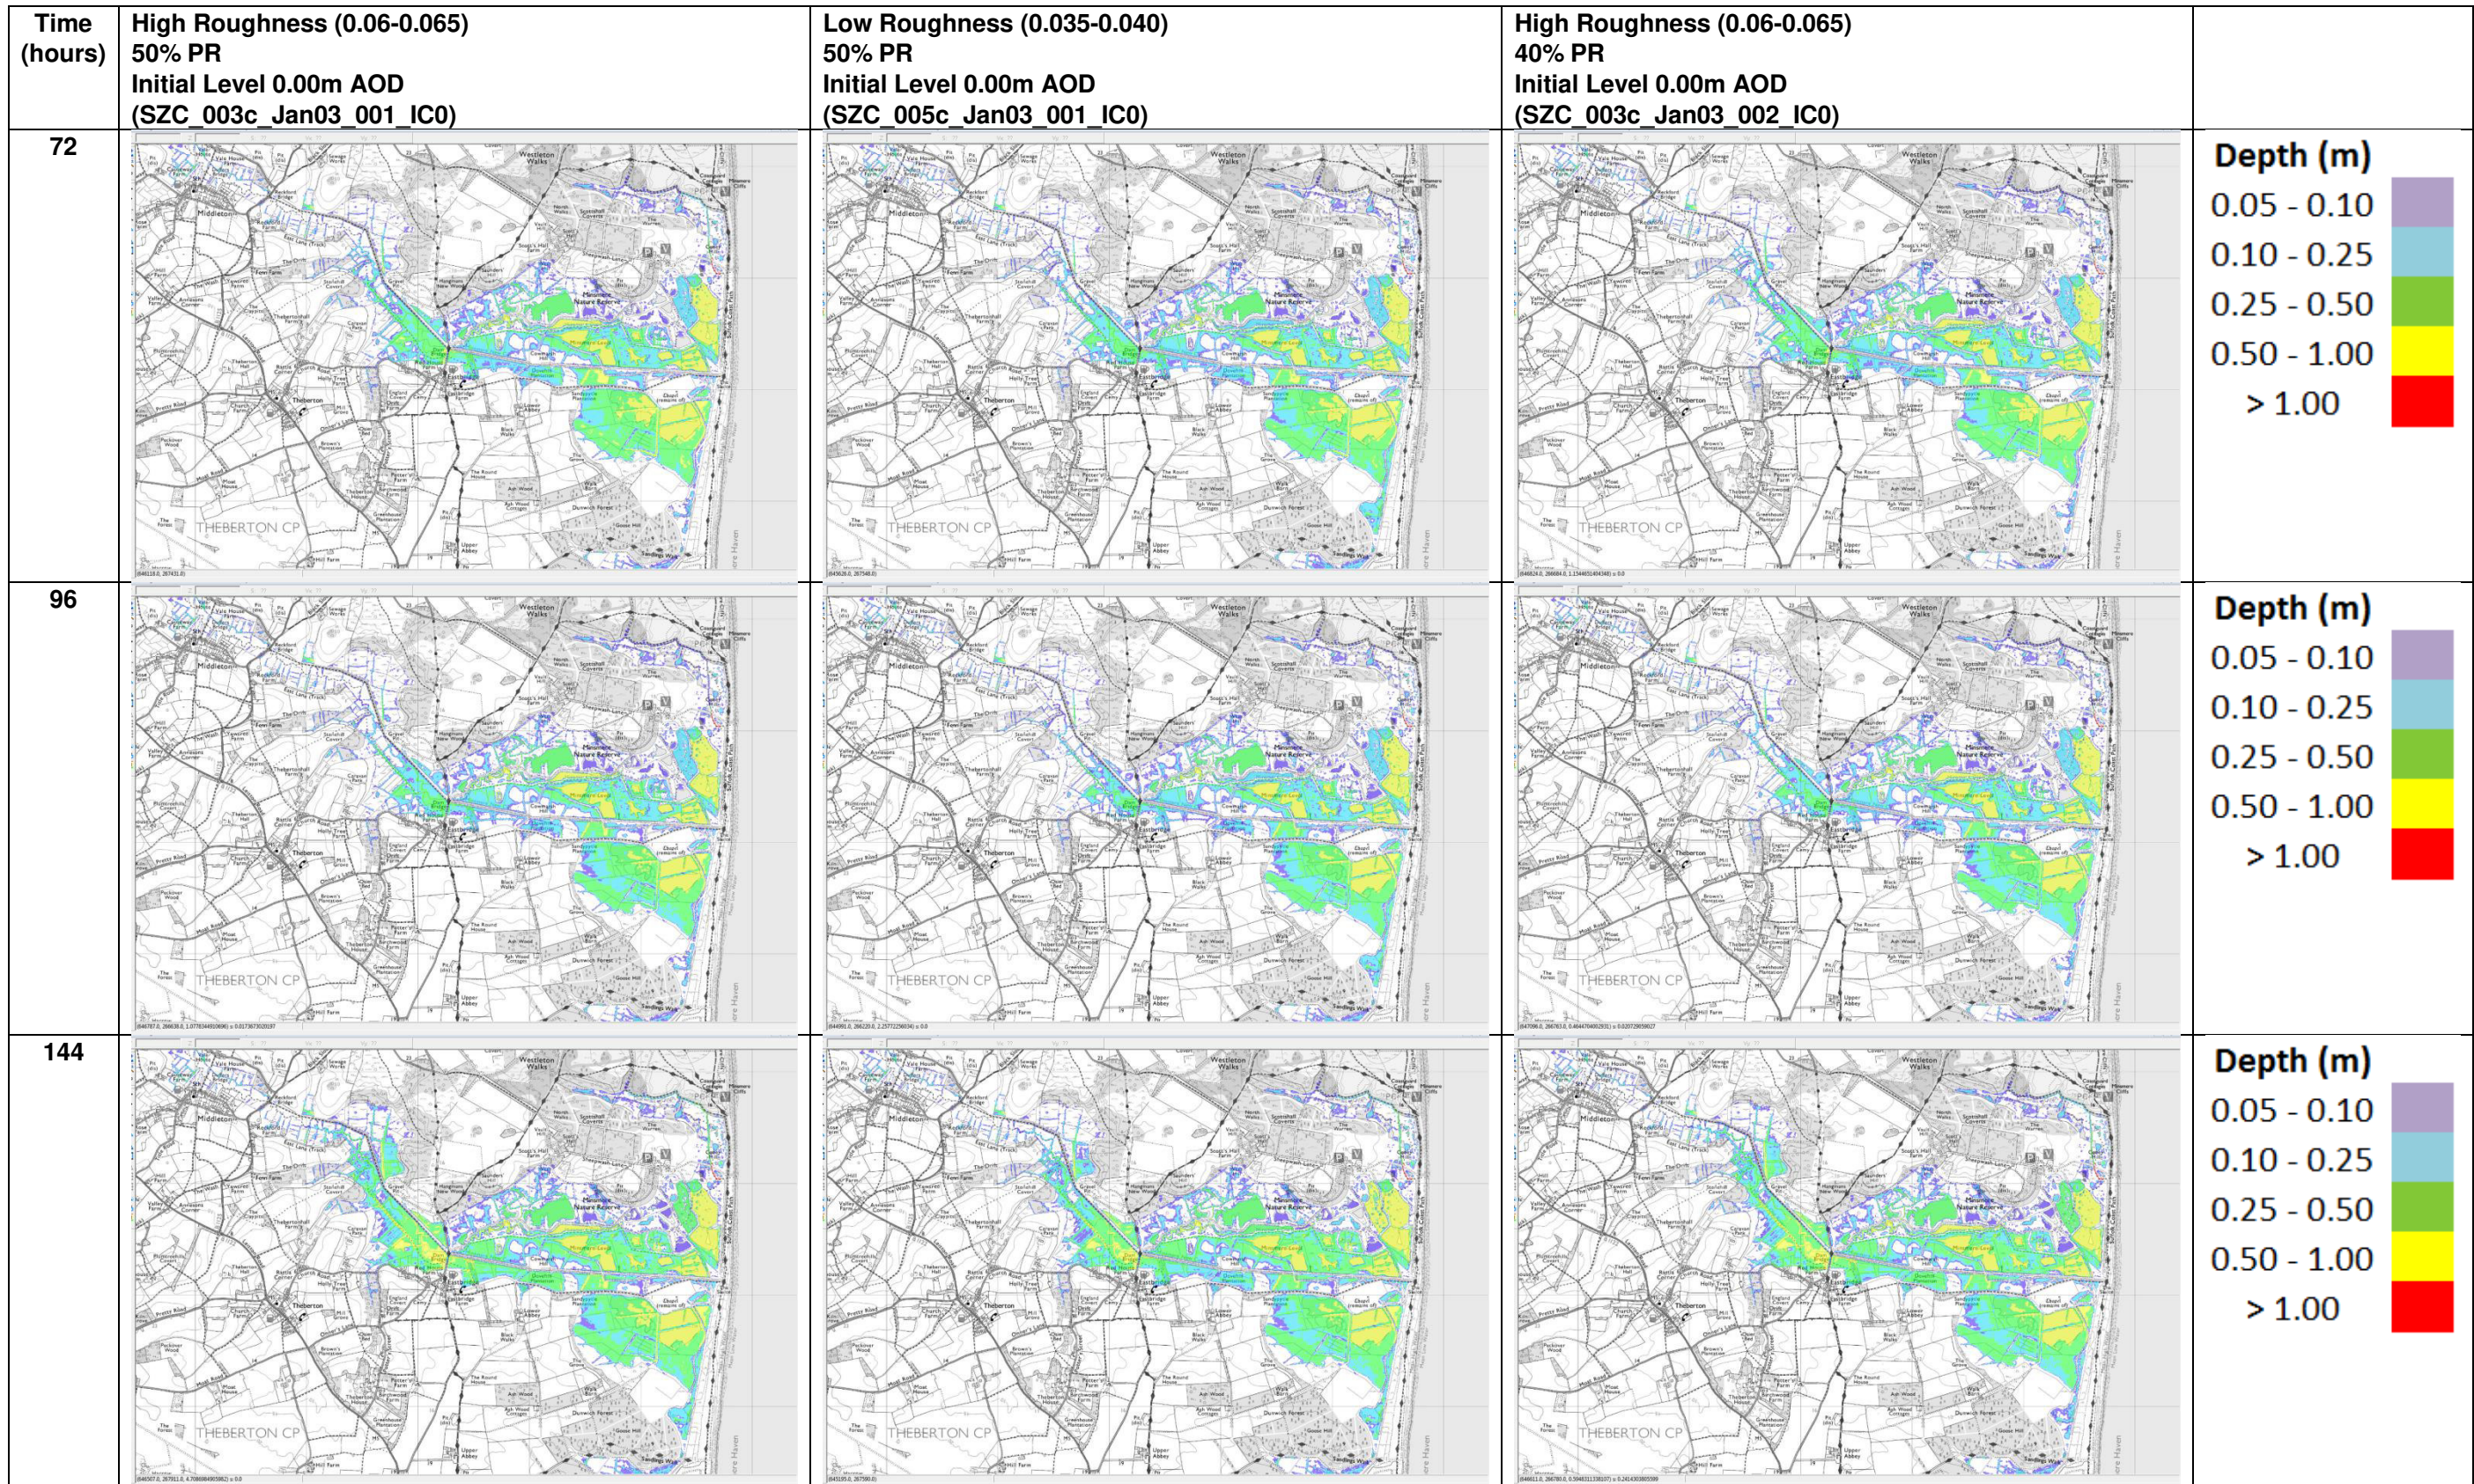

Revision: 1.0
Applicable Regulation: Regulation 5(2)(e)
PINS Reference Number: EN010012

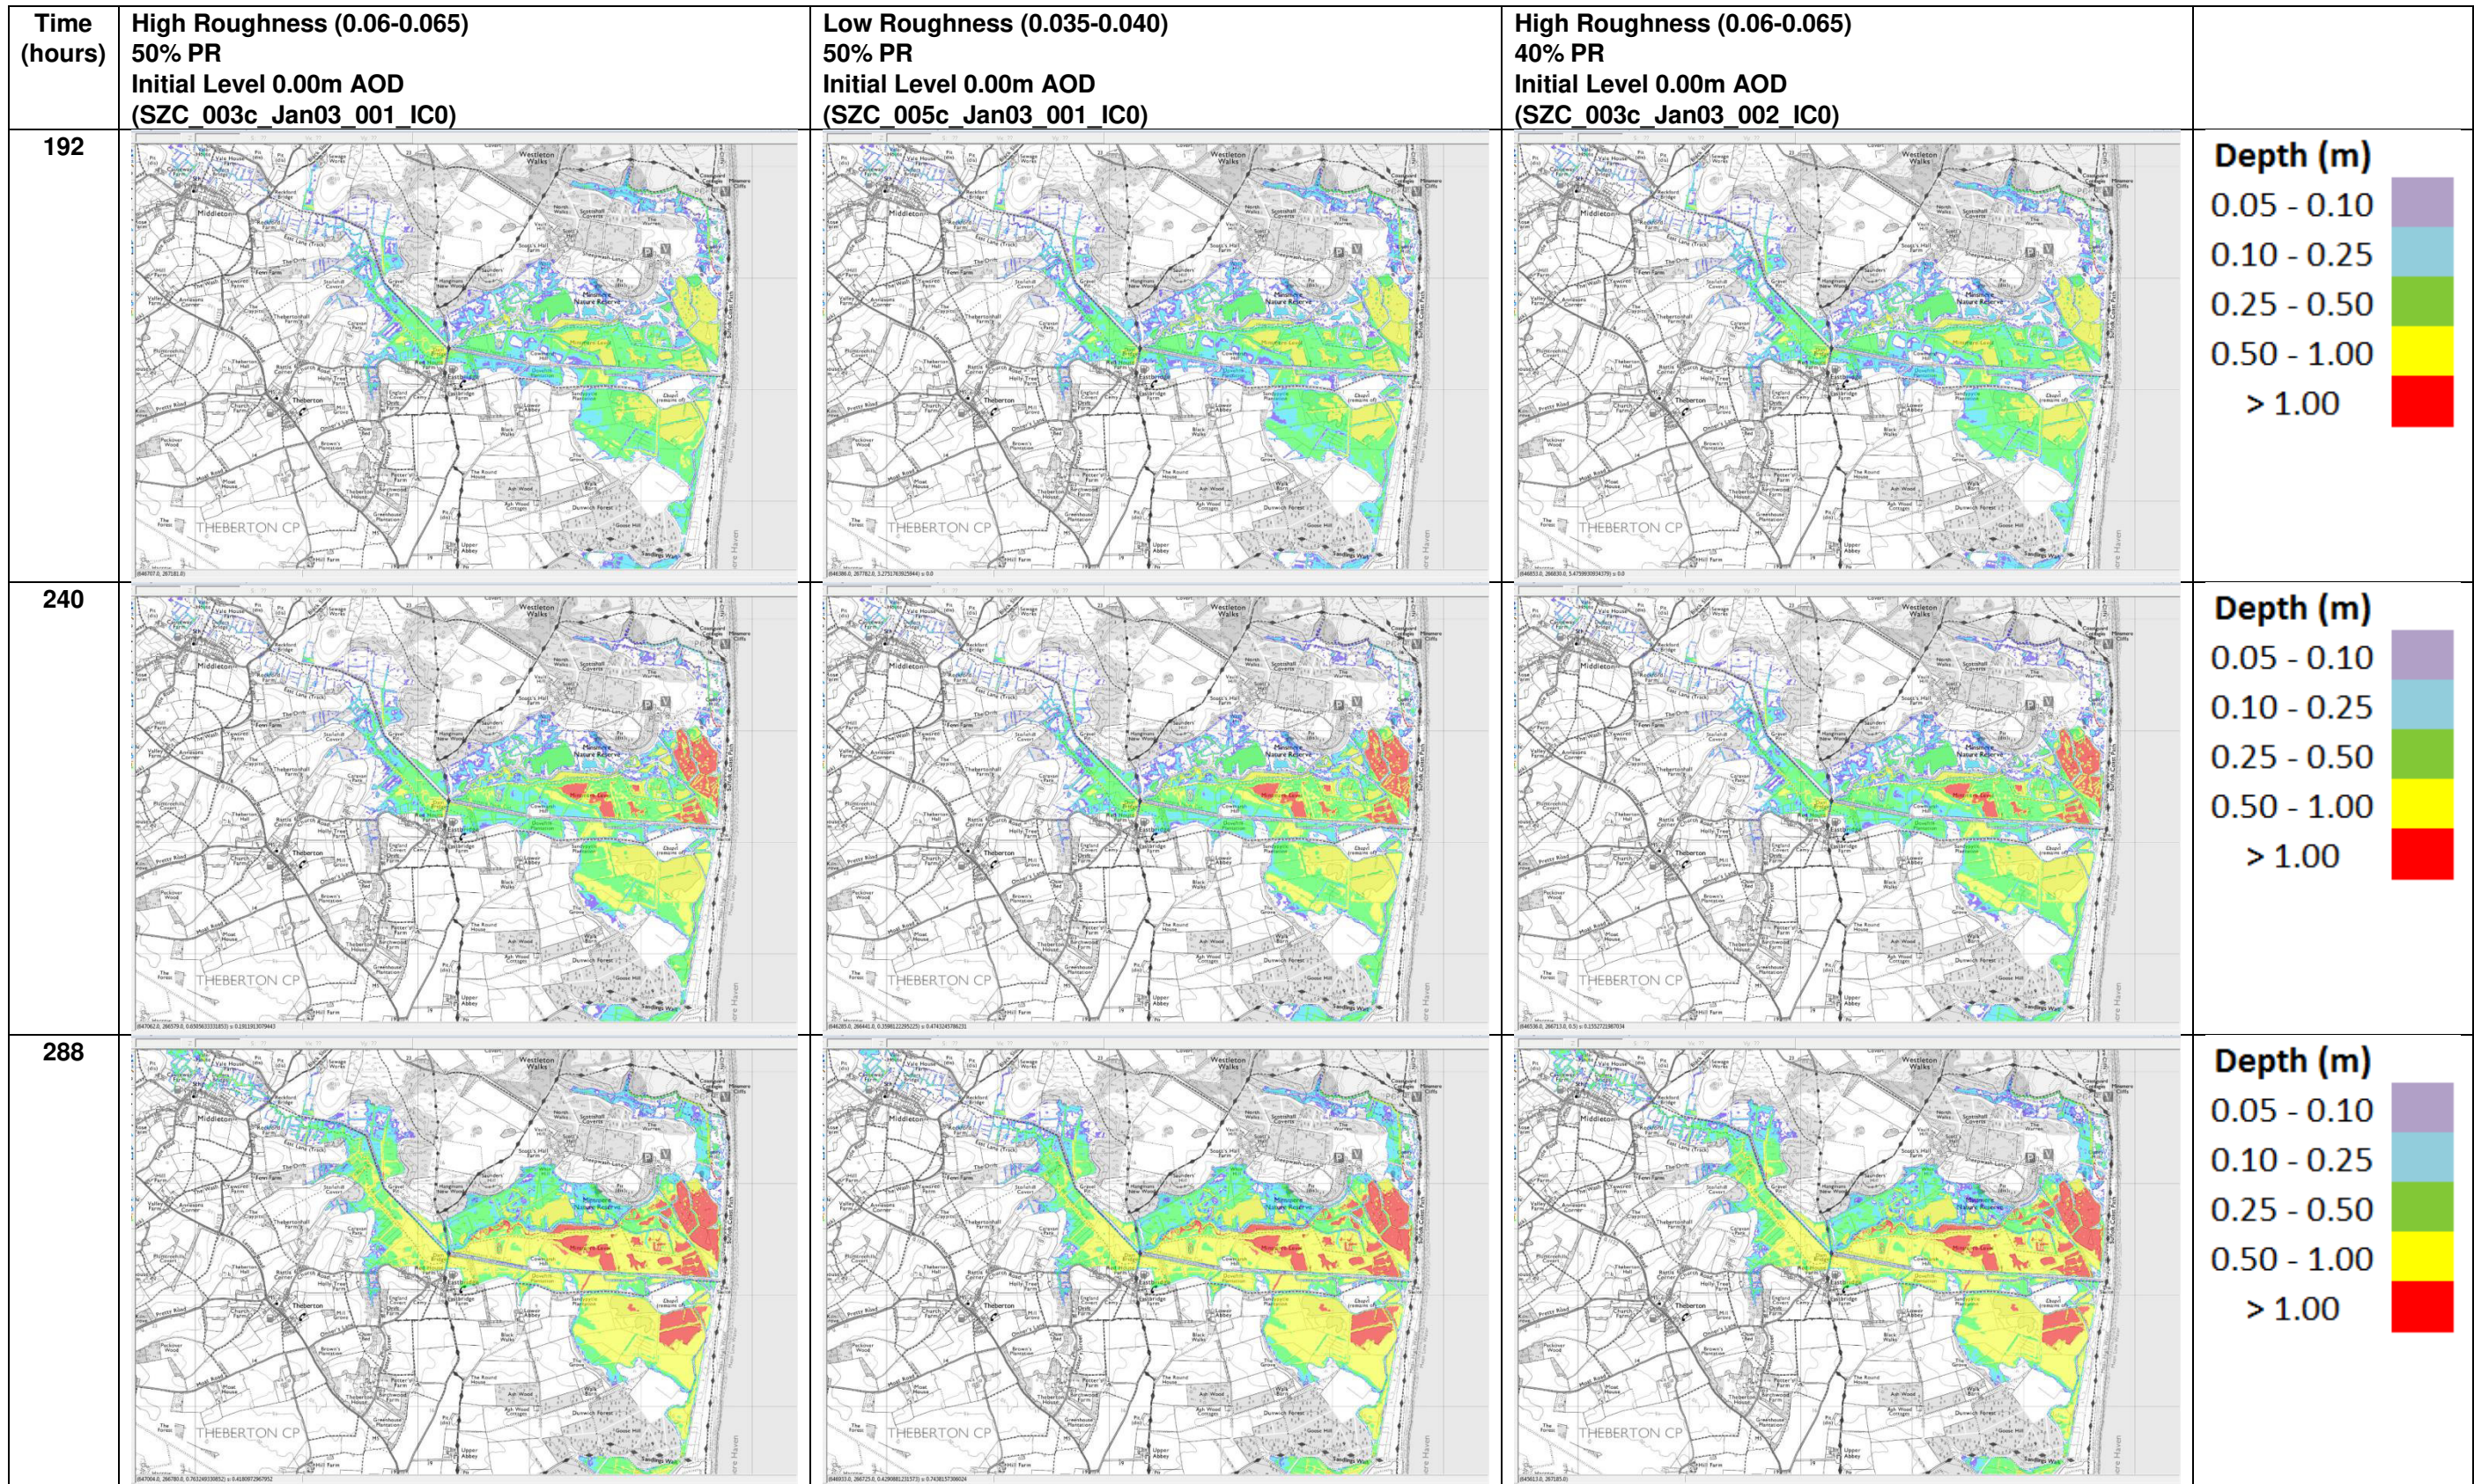

May 2020

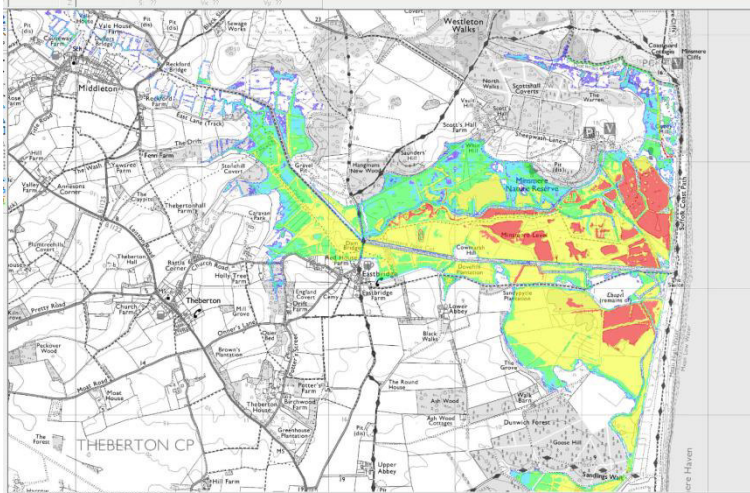

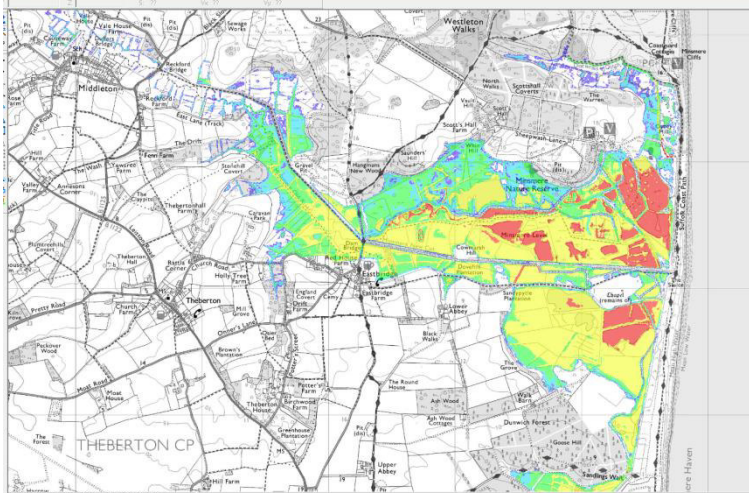

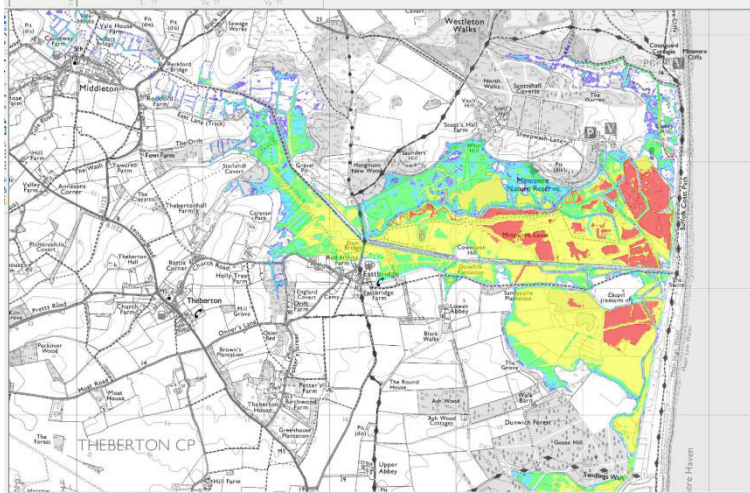

Planning Act 2008
Infrastructure Planning (Applications: Prescribed
Forms and Procedure) Regulations 2009

Time (hours)	High Roughness (0.06-0.065) 50% PR Initial Level 0.00m AOD (SZC_003c Jan03_001_IC0)	Low Roughness (0.035-0.040) 50% PR Initial Level 0.00m AOD (SZC_005c Jan03_001_IC0)	High Roughness (0.06-0.065) 40% PR Initial Level 0.00m AOD (SZC_003c Jan03_002_IC0)	
336				<p>Depth (m)</p> <ul style="list-style-type: none"> 0.05 - 0.10  0.10 - 0.25  0.25 - 0.50  0.50 - 1.00  > 1.00 

Time (hours)	Commentary
0	Initial Conditions for all model runs inundate floodplain below 0.00m AOD
12	There is little difference in flood extent between the three scenarios at 12 hours
24	There is little difference between the three scenarios at 24 hours however the low roughness (0.035-0.040) scenario exhibits less flooding immediately upstream and downstream of Reckford Bridge compared to the high roughness (0.060-0.065) roughness coefficient scenario
36	Similar observations as 24 hours between the high and low roughness coefficient scenarios however the low roughness coefficient scenario exhibits more flooding in the south levels (as a combination of tide and less upstream attenuation is available in this lower reach of the model which spills to the floodplain) Flooding is less extensive downstream of Dam Bridge (on both north and south floodplain) in the 40% PR scenario in comparison to the 50% PR scenario
48	All three scenarios exhibit similar flood extents and depths
60	All three scenarios exhibit similar flood extents and depths
72	All three scenarios exhibit similar flood extents and depths
96	All three scenarios exhibit similar flood extents and depths
144	All three scenarios exhibit similar flood extents and depths
192	All three scenarios exhibit similar flood extents and depths
240	All three scenarios exhibit similar flood extents and depths
288	All three scenarios exhibit similar flood extents and depths
336	All three scenarios exhibit similar flood extents and depths

APPENDIX D - Fluvial Model Calibration meeting minutes April 2016

SZC FRA FLUVIAL MODEL CALIBRATION RESULTS CONSULTATION

(Version 0.1)

Level: na
Date: 25th April 2016
Location: Work Centre, RSPB Reserve, Minsmere
Chairman: [REDACTED]
Attendees: **Stakeholders:**

RSPB [REDACTED]
 Suffolk Wildlife Trust: [REDACTED]
 Suffolk IDB: [REDACTED]

NNB:
 Planning & External Affairs: [REDACTED]

Contractors:
 [REDACTED]

Apologies:

Executive Summary Points:

1	Flood extents and flood mechanisms (with one exception) have been represented in the hydraulic model
2	
3	
4	

Actions from previous meetings:

Date Raised	Action Ref.	Description	Originator	Actionee	Status at Meeting	Comment

SZC FRA FLUVIAL MODEL CALIBRATION RESULTS CONSULTATION

(Version 0.1)

Meeting Notes:

1. Introductions

2. Aim

To understand if the model predictions simulate observed flood mechanisms by local stakeholders

3. Discussion of Technical Note (to page 13)

- **BM** - RSPB hydrologists have not yet seen/given feedback to the Technical note, this is expected in one to two weeks.
- No knowledge of houses being flooded in Eastbridge in the past but possibly lower parts of gardens have been affected. Local residents/landowners may be able to confirm this as well as flooding depths across Eastbridge and Reckford Road bridges.
- **AR/RH** suggested the commentary from the B+V report (included in the Technical Note p4) may not be accurate as there would not be southward movement of water north of IDB drain no.7 (indicated by arrows between C81 and C83 in Figure 4 of the B+V report) due to the high bund surrounding the washland.
- **RH** expressed that opening a 2nd sluice on Minsmere New Cut seems to alleviate flooding in the RSPB reserve (north of the New Cut)
- There were questions regarding why 50% PR figure is acceptable for Middleton and if this is acceptable for the whole catchment. **LG** explained that the figure is based on observations of the best available data for the event(s). It is assumed therefore (without any other data being available) that hydrological inputs downstream of Middleton will therefore react in a similar manner.
- **GB** highlighted that the cross-sectional profile of the river may be different to that of the former survey due to siltation and change in frequency of maintenance (due to budget constraints). It is believed that the river was constantly dredged until recent history but has not been for a while, leading to reduced depth and width caused by silt deposits and plant growth. **GB** advised the cross-sectional profile is up to date as the channel is designed to be maintained. Therefore, going forward the baseline level should be understood, the maintenance profile must be clear and realistic design dimensions should be used. More frequent management could create more capacity and reduce flooding. EA may have archived profiles.

4. Model Animations Discussion

LG showed animations of flooding for different roughness coefficients (without tidal influence) and explained that different flooding mechanisms were seen with a change in roughness. It was acknowledged that the influence of the tide (represented as static 0m AOD boundaries in models 062 and 065) would also have an effect on water levels and therefore mechanisms.

Model 062 (low roughness, stepped hydrograph, constant 0m AOD tide boundary)

- The stakeholders suggested that the model mechanisms were credible and were similar to those expressed in the Technical Note commentaries
- However the stakeholders believed that the South Levels and the Scrape would be inundated with a greater depth relative to other areas (although the model is run without a varying tidal boundary or other inflows)

Model 065 (high roughness, stepped hydrograph, constant 0m AOD tide boundary)

GB expressed that mechanisms were as expected in the south-western corner of the South Levels.

Model 066 (low roughness, ~100 year hydrograph, constant 0m AOD tide boundary)

- The area around the upstream end of the Minsmere Old River needs looking into as it was thought (**RH/AR**) that more water would spill over the left hand bank of the Minsmere New Cut immediately downstream of Dam Bridge. A lack of spilling may be due to the model having a static tidal boundary and no other inflows.
- **LG** to check topo data to see if it reflects a short reach of low bank.
- It was expressed that modelled water depths behind (north of) buildings at Eastbridge looked low (however there is no tide or other inflows in the model which may explain this)

January 2003 Event (high roughness 3c)

- **All** - Extent of flooding appeared to be representative
- The extent of the flooding on privately owned land is unclear as participants of the meeting have no access to these areas, including Theberton Hall Farm.

SZC FRA FLUVIAL MODEL CALIBRATION RESULTS CONSULTATION

(Version 0.1)

- The 0.5m initial floodplain water level was probably too high at Dowleys but more representative in other areas
- **RH** – Initial water depths of in the Old Reed Beds and North Marsh appear not to be deep enough (final flood extent is however), it is believed this will be due to the vegetation and an issue with LiDAR overestimating topography (poor accuracy in filtering reeds), therefore ground level and hence depths in some locations could be misleading. **LG** to look at LiDAR data to determine difference in height between filtered and unfiltered LiDAR. CEFAS UAV data may be available to give a more suitable ground elevations.
- The model outputs at Eastbridge were shown in more detail, flood depths looked 'light' (not as deep as expected). It was felt that local residents may raise questions on accuracy of results due to the 8m grid (they will have concerns about their own land/property at a finer scale). **LG** explained that details such as the height of the road were added into the model for accuracy.
- **GB** - The road at Eastbridge can be inundated by 300-400mm in flood events. **LG** to check flood depth on road for Jan 2003 event to verify results against general observations.
- **GB** – Model and outputs could be useful for updating Water Level Management Plans
- **BW** - The animations will to be sent through to stakeholders.
- A question was raised how groundwater will be accounted for in the models, **BW/LG** explained the findings of the groundwater investigation can be included, where appropriate, in the scenarios to be modelled

5. Discussion of Technical Note (after page 13)

- There was confusion with what was meant by 'reasonable correlation'. **BM** would like to see statistical regression to show this correlation. However it was agreed that the higher starting water levels (0.5m AOD) gave the better calibration.
- **BM** asked if the 45mm stated on page 18 was a typo (450mm instead)? **LG** explained it was not. **BM** suggested that adding the absolute water levels from the various model runs would help in showing that despite the differences in boundary or initial conditions, maximum water levels were with 45mm of each other.
- The stakeholders were unsure why tree hide sluice was chosen for analysis when it has relatively poor connectivity in comparison with other parts of the system, and sits at a higher level. **LG** had explained that the points were selected on data availability and ability of each point to represent large areas of floodplain.
- It was suggested that the speed in which the water levels return to normal depend on what areas are drained and at what time (local water level management). Therefore subsequent events can have a larger/smaller impact on certain areas due to remaining/draining water levels. It was acknowledge that the whole system cannot be drained at once.
- **BF** asked if the second Minsmere sluice will be run as being open or closed in the future. **LG** explained that both scenarios will be run in the future to ensure that the effects of this management option can be assessed for pre/post development.
- **RH** - There have been recent works at North Girder to raise bank elevations recently and it was unclear whether these were included in the model. **LG** said these have not been included unless they are represented in the LIDAR (which is believed to pre-date any work). This data may be available for use.
- **GB** asked if neap and spring tides will be considered. **LG** explained that the timing of coincident fluvial/tidal peaks will be considered and that the EA will be consulted regarding the shape of the final tide curve to be used (which will take account that the shape of the tide will vary with both springs and neaps). Neaps will be important if the low tide (which is higher than low tides of springs) is above the invert of the outlet (which will be investigated).
- Individual maps may need to be produced to highlight the different scenarios that will be the most relevant to each stakeholder e.g. land drainage clients.
- The stakeholders stated that the model has been generally accurate in representing flood mechanisms and could have a large benefit on water level management plans, action thresholds, flood response and drought. **BW** said that the model would be updated taking into account comments received at the meeting and also written comments received after the meeting, Once those changes have been made and results are available a further meeting with the RSPB, SWT and IDB would be arranged.
- **AR/RH** – Asked if the model could be updated to include the low left hand bank immediately downstream of Dam Bridge as water has spilt over the bank here in the past,. **LG** already actioned to check survey data to see if existing survey picks this up.

SZC FRA FLUVIAL MODEL CALIBRATION RESULTS CONSULTATION

(Version 0.1)

6. Any other business

No additional matters were raised.

New actions from meeting:

Date Raised	Action Ref.	Description	Originator	Actionee	Date Due
25/04/2016	1	Check topography data on LHB downstream of Dam Bridge to see if low point is depicted	RH	LG	13/05/16
25/04/2016	2	Verify flood depth across the road south of Dam Bridge in the model as depths of 300-400mm have been observed in the past (verification of calibration results as there is no recorded stage data)	GB	LG	13/05/16
25/04/2016	3	Renaming and supply of animations to stakeholders	BW	LG	13/05/16
25/04/2016	4	Check if data is available for supply regarding works within the RSPB reserve (for example changes to bank elevations at North Girder)	RH	RH	20/05/16
25/04/2016	5	Check topographic information around the Old Reed Beds and North Marsh	AR/RH	LG	13/5/2016
25/04/2016	6	Update model considering comments fed back to NNB	BW	LG	13/06/16

APPENDIX E – model results Minsmere system for 2016 event

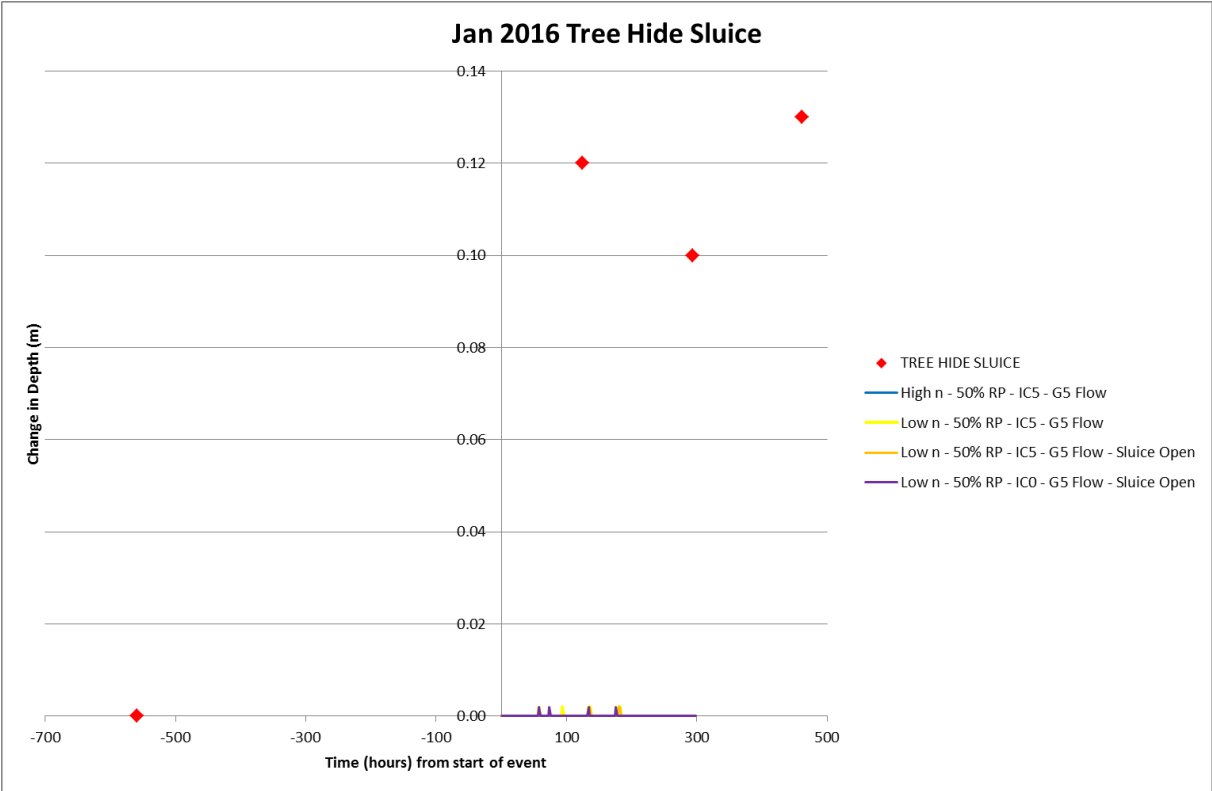

Figure 1 - January 2016 Tree Hide Sluice Changes in Modelled and Observed Water Depth

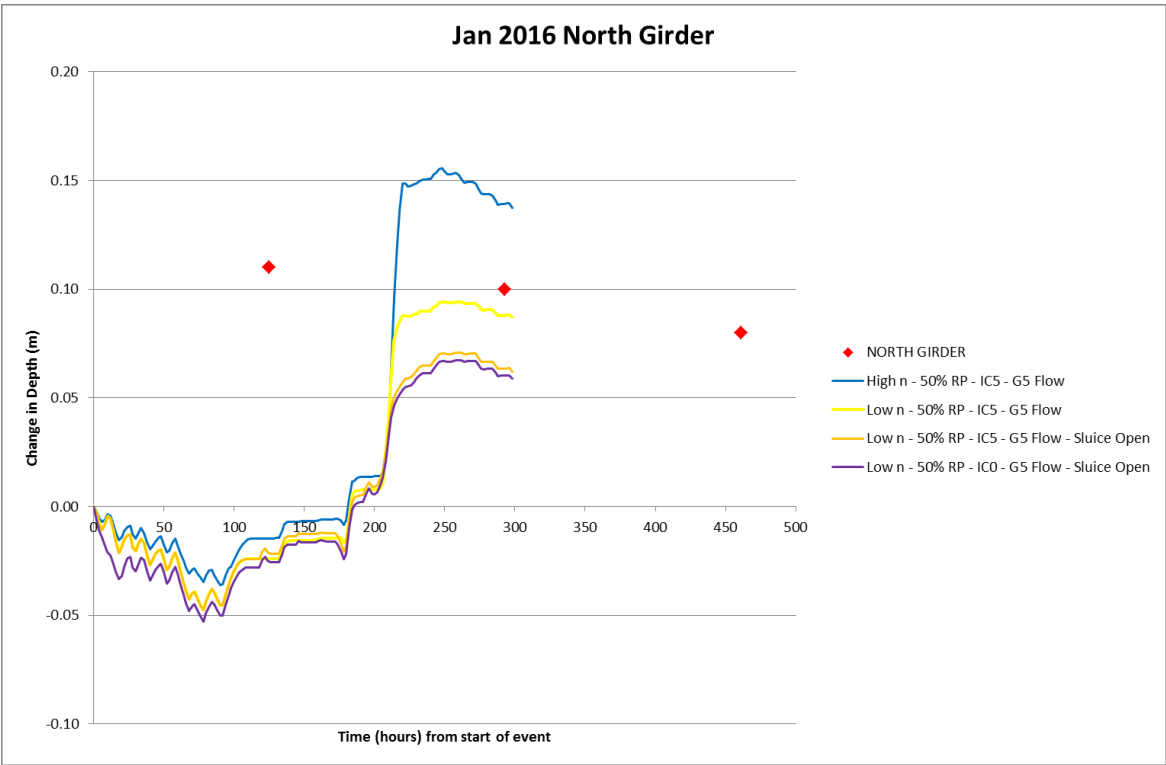

Figure 2 - January 2016 North Girder Changes in Modelled and Observed Water Depth

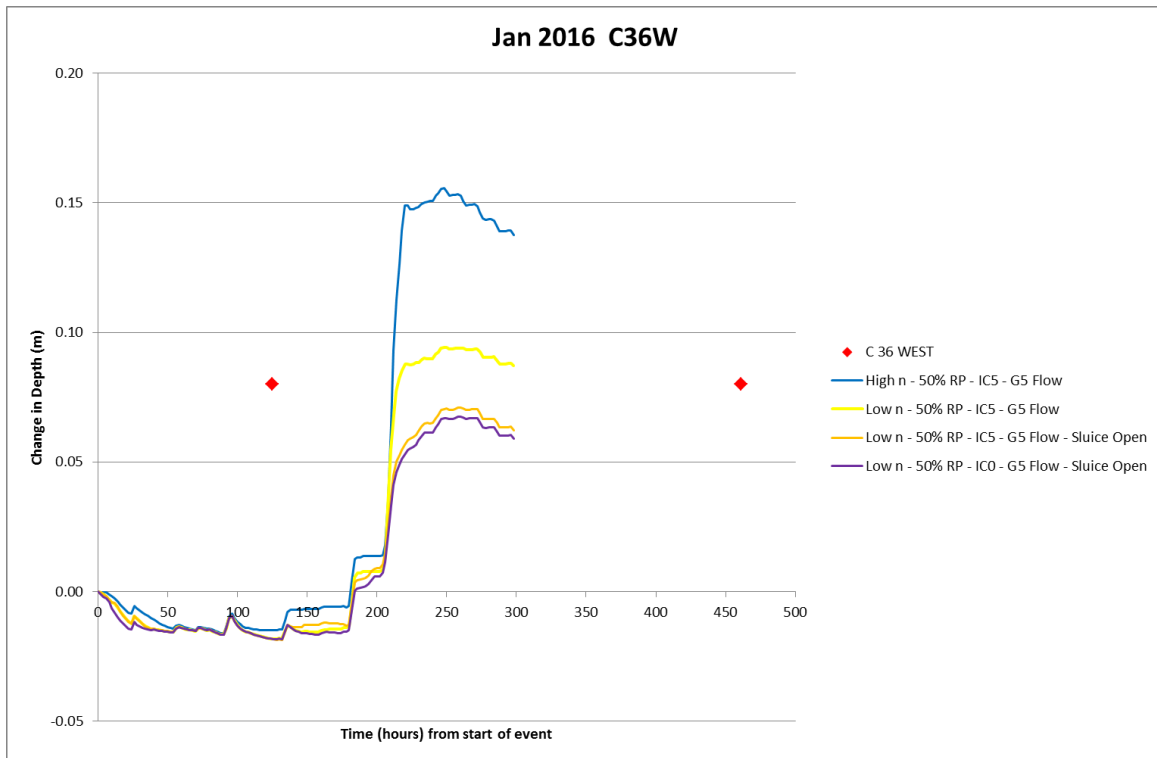

Figure 3 - January 2016 C36W Changes in Modelled and Observed Water Depth

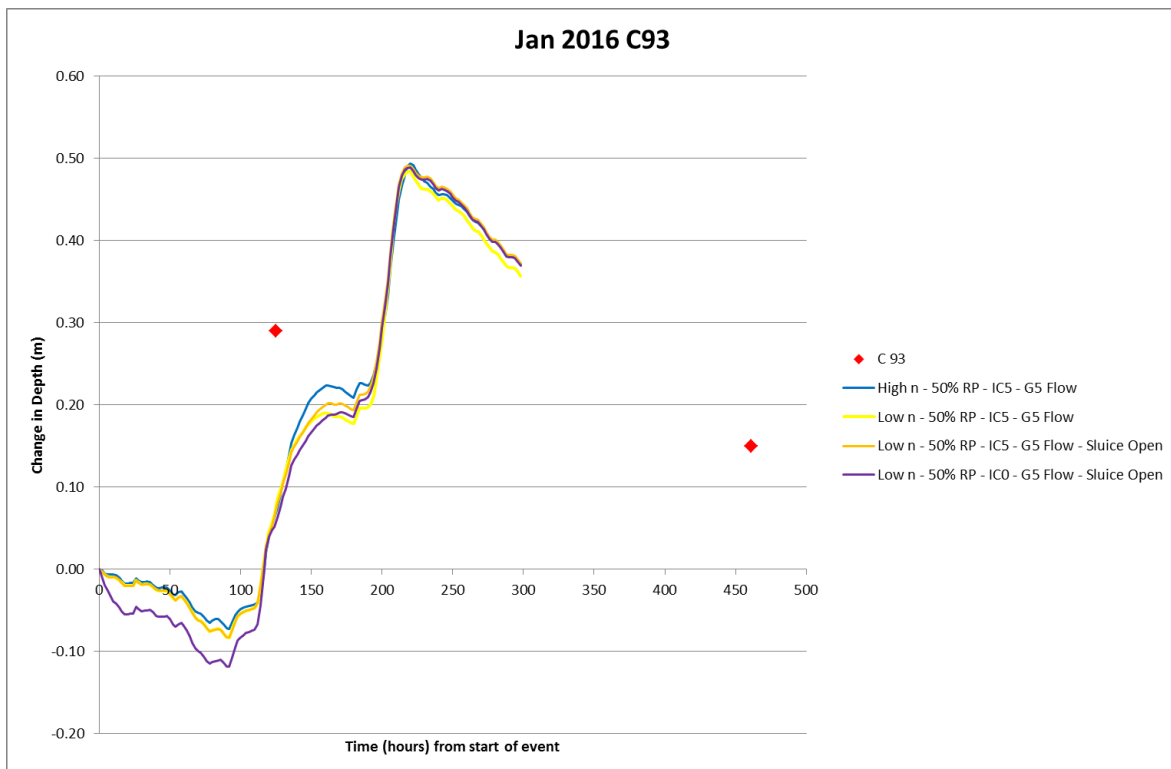

Figure 4 - January 2016 C93 Changes in Modelled and Observed Water Depth

APPENDIX F – Data availability for the Minsmere system for 2016 event

APPENDIX F – Data availability for the Minsmere system for 2016 event

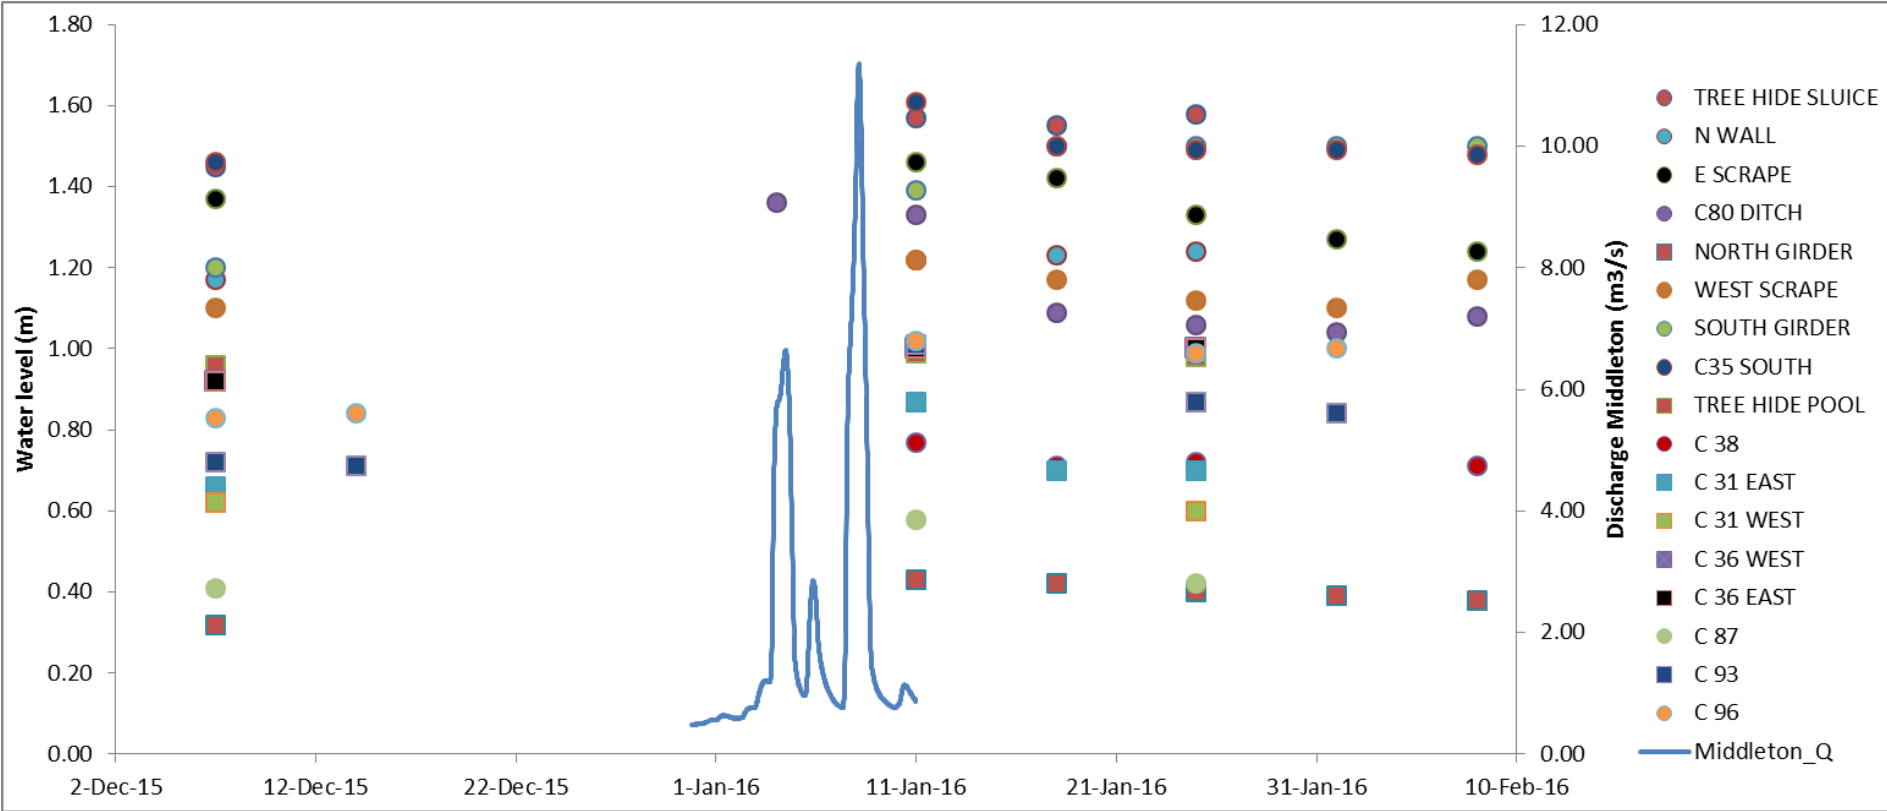

Figure showing the data availability for the Minsmere system (for each gauging station) during the 2016 event. It shows that no data is available during the event for the entire Minsmere system and that the only data that is available is weekly data. As the events duration is little over a week this is of little help.

APPENDIX C: FLUVIAL MODEL RESULTS – BASELINE FLOOD DEPTH, HAZARD AND VELOCITY
