Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	A12 / B1079 Grundsburg Road
Location	52° 5'45.80"N, 1° 17'54.03"E
Site number	27
Date	02/04/2019
Version	
Status	Skeleton Model
Identifier	
Client	
Jobnumber	
Enumerator	SR
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	mph	Veh	Veh	perHour	s	-Min	perMin

Analysis Options

Arms

Arms

Arm	Name	Description
A	A12 North	
B	Grundisburgh Rd West	
C	A12 South	
D	B1079 East	

Roundabout Geometry

Arm	V - Approach road half-width (m)	E - Entry width (m)	I' - Effective flare length (m)	R - Entry radius (m)	D - Inscribed circle diameter (m)	PHI - Conflict (entry) angle (deg)	Exit only
A - A12 North	7.40	7.40	0.0	32.9	55.1	9.0	
B - Grundisburgh Rd West	2.70	6.10	12.0	22.1	55.1	13.5	
C - A12 South	6.70	7.80	5.2	25.1	55.1	3.5	
D - B1079 East	2.60	7.10	11.6	26.6	55.1	6.5	

Slope / Intercept / Capacity

Arm Intercept Adjustments

Arm	Type	Reason	Direct intercept adjustment (PCU/hr)
A - A12 North	Direct		-80
B - Grundisburgh Rd West	Direct		-65
C - A12 South	Direct		-300
D - B1079 East	None		

Roundabout Slope and Intercept used in model

Arm	Final slope	Final intercept (PCU/hr)
A - A12 North	0.745	2369
B - Grundisburgh Rd West	0.554	1377
C - A12 South	0.749	2156
D - B1079 East	0.578	1525

The slope and intercept shown above include any corrections and adjustments.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

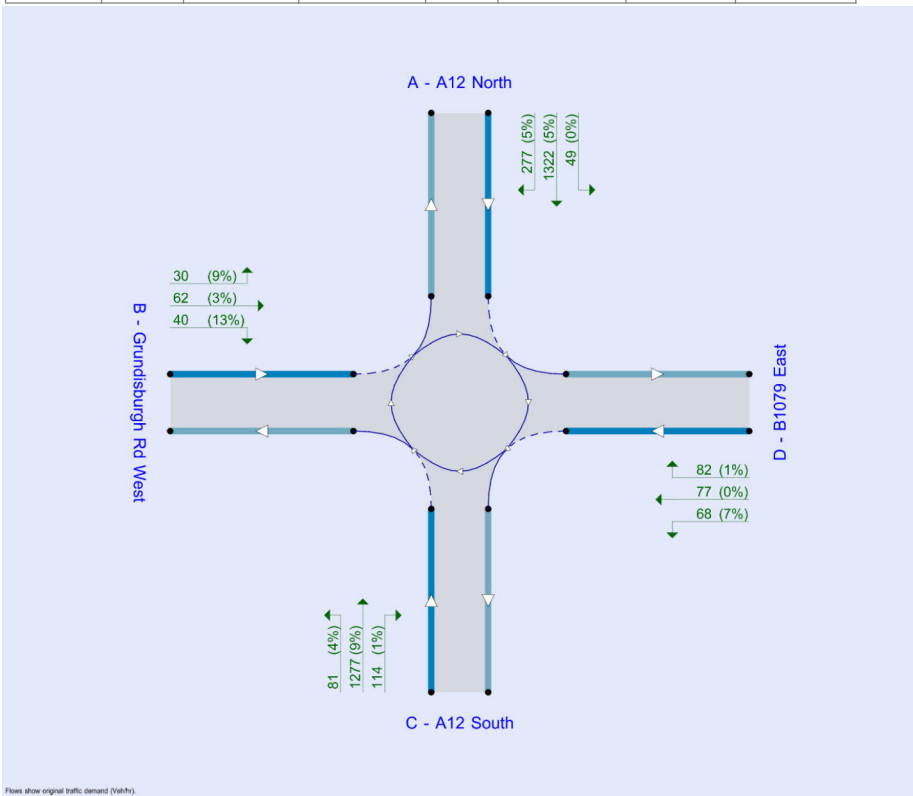

File summary

File Description

Title	A12 / B1079 Grundsburgh Road
Location	52° 5'45.80"N, 1° 17'54.03"E
Site number	27
Date	02/04/2019
Version	
Status	Skeleton Model
Identifier	
Client	
Jobnumber	
Enumerator	SR
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	mph	Veh	Veh	perHour	s	-Min	perMin

Flows show original traffic demand (Veh/hr).
The junction diagram reflects the last run of Junctions.

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Demand Set Summary

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	A12 / A1152 Woods Lane
Location	52° 6'21.15"N, 1°18'34.71"E
Site number	28
Date	01/04/2019
Version	
Status	Skeleton Model
Identifier	
Client	
Jobnumber	
Enumerator	JV
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	mph	Veh	Veh	perHour	s	-Min	perMin

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

2019 Base Year, 6-7 AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Geometry	A - A12 North - Roundabout Geometry	Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution.

Junction Network

Junctions

Junction	Name	Junction type	Use circulating lanes	Arm order	Junction Delay (s)	Junction LOS
J28	A12 / A1152 Woods Lane	Standard Roundabout		A, C, B	3.17	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description
A	A12 North	
B	A12 South West	
C	A1152 East	

Roundabout Geometry

Arm	V - Approach road half-width (m)	E - Entry width (m)	I' - Effective flare length (m)	R - Entry radius (m)	D - Inscribed circle diameter (m)	PHI - Conflict (entry) angle (deg)	Exit only
A - A12 North	3.70	8.20	71.5	22.2	64.9	24.0	
B - A12 South West	7.70	7.80	0.9	20.6	64.9	9.0	
C - A1152 East	3.10	8.40	25.9	31.8	64.9	38.0	

Slope / Intercept / Capacity

Arm Intercept Adjustments

Arm	Type	Reason	Direct intercept adjustment (PCU/hr)
A - A12 North	Direct	Please refer column "V" in "modelled vs Observed" worksheet in "Queue validation" spreadsheet	-370
B - A12 South West	Direct	Please refer column "V" in "modelled vs Observed" worksheet in "Queue validation" spreadsheet	-470
C - A1152 East	Direct	Please refer column "V" in "modelled vs Observed" worksheet in "Queue validation" spreadsheet	-150

Roundabout Slope and Intercept used in model

Arm	Final slope	Final intercept (PCU/hr)
A - A12 North	0.638	1944
B - A12 South West	0.686	2060
C - A1152 East	0.559	1741

The slope and intercept shown above include any corrections and adjustments.

Traffic Demand

Demand Set Details

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	A12 / A1152 Woods Lane
Location	52° 6'21.15"N, 1°18'34.71"E
Site number	28
Date	01/04/2019
Version	
Status	Skeleton Model
Identifier	
Client	
Jobnumber	
Enumerator	JV
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	mph	Veh	Veh	perHour	s	-Min	perMin

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

2019 Base Year, 6-7 AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Geometry	A - A12 North - Roundabout Geometry	Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution.

Junction Network

Junctions

Junction	Name	Junction type	Use circulating lanes	Arm order	Junction Delay (s)	Junction LOS
J28	A12 / A1152 Woods Lane	Standard Roundabout		A, C, B	3.17	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description
A	A12 North	
B	A12 South West	
C	A1152 East	

Roundabout Geometry

Arm	V - Approach road half-width (m)	E - Entry width (m)	I' - Effective flare length (m)	R - Entry radius (m)	D - Inscribed circle diameter (m)	PHI - Conflict (entry) angle (deg)	Exit only
A - A12 North	3.70	8.20	71.5	22.2	64.9	24.0	
B - A12 South West	7.70	7.80	0.9	20.6	64.9	9.0	
C - A1152 East	3.10	8.40	25.9	31.8	64.9	38.0	

Slope / Intercept / Capacity

Arm Intercept Adjustments

Arm	Type	Reason	Direct intercept adjustment (PCU/hr)
A - A12 North	Direct	Please refer column "V" in "modelled vs Observed" worksheet in "Queue validation" spreadsheet	-370
B - A12 South West	Direct	Please refer column "V" in "modelled vs Observed" worksheet in "Queue validation" spreadsheet	-470
C - A1152 East	Direct	Please refer column "V" in "modelled vs Observed" worksheet in "Queue validation" spreadsheet	-150

Roundabout Slope and Intercept used in model

Arm	Final slope	Final intercept (PCU/hr)
A - A12 North	0.638	1944
B - A12 South West	0.686	2060
C - A1152 East	0.559	1741

The slope and intercept shown above include any corrections and adjustments.

Traffic Demand

Demand Set Details

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	A12 Southbound on slip / B1078 / Station Road
Location	52° 9'34.11"N, 1°22'50.74"E
Site number	34c
Date	02/04/2019
Version	
Status	(new file)
Identifier	
Client	
Jobnumber	
Enumerator	CORPIINSR01910
Description	Give way width of the minor arm is 10m, due to the junctions 9 restriction.

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	mph	Veh	Veh	perHour	s	-Min	perMin

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Analysis Set Details

ID	Include in report	Network flow scaling factor (%)	Network capacity scaling factor (%)
A1	✓	100.000	100.000

Base Year, 6-7 AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Major arm width	C - A12 South West - Major arm geometry	For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
J38	A12 / B1125 Angel Lane	T-Junction	Two-way		0.49	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	A12 North		Major
B	Angel Lane South East		Minor
C	A12 South West		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - A12 South West	5.50			80.6	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Angel Lane South East	One lane	3.72	16	75

Slope / Intercept / Capacity

Stream Intercept Adjustments

Stream intercept adjustment	Use adjustment	Reason	Direct intercept adjustment (PCU/hr)
B-AC	✓	Please refer column "V" in "modelled vs Observed" worksheet in "Queue validation" spreadsheet	0

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	557	0.104	0.262	0.165	0.374
B-C	720	0.113	0.285	-	-
C-B	621	0.246	0.246	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	A12 / Bell Lane
Location	52°10'8.75"N, 1°24'9.72"E
Site number	40
Date	02/04/2019
Version	
Status	(new file)
Identifier	
Client	
Jobnumber	
Enumerator	JV
Description	The Give way width on minor arm has been modelled as 10m as Junctions 9 restricts the give way width to less than 10m.

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	mph	Veh	Veh	perHour	s	-Min	perMin

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Analysis Set Details

ID	Include in report	Network flow scaling factor (%)	Network capacity scaling factor (%)
A1	✓	100.000	100.000

Base Year, 6-7 AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Major arm width	C - A12 North East - Major arm geometry	For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
J40	A12 / Bell Lane	T-Junction	Two-way		0.26	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	A12 South West		Major
B	Bell Ln North		Minor
C	A12 North East		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - A12 North East	5.75			154.2	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B - Bell Ln North	One lane plus flare	10.00	5.50	3.30	3.30	3.20	✓	1.00	18	49

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	555	0.102	0.258	0.163	0.369
B-C	641	0.099	0.251	-	-
C-B	663	0.260	0.260	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

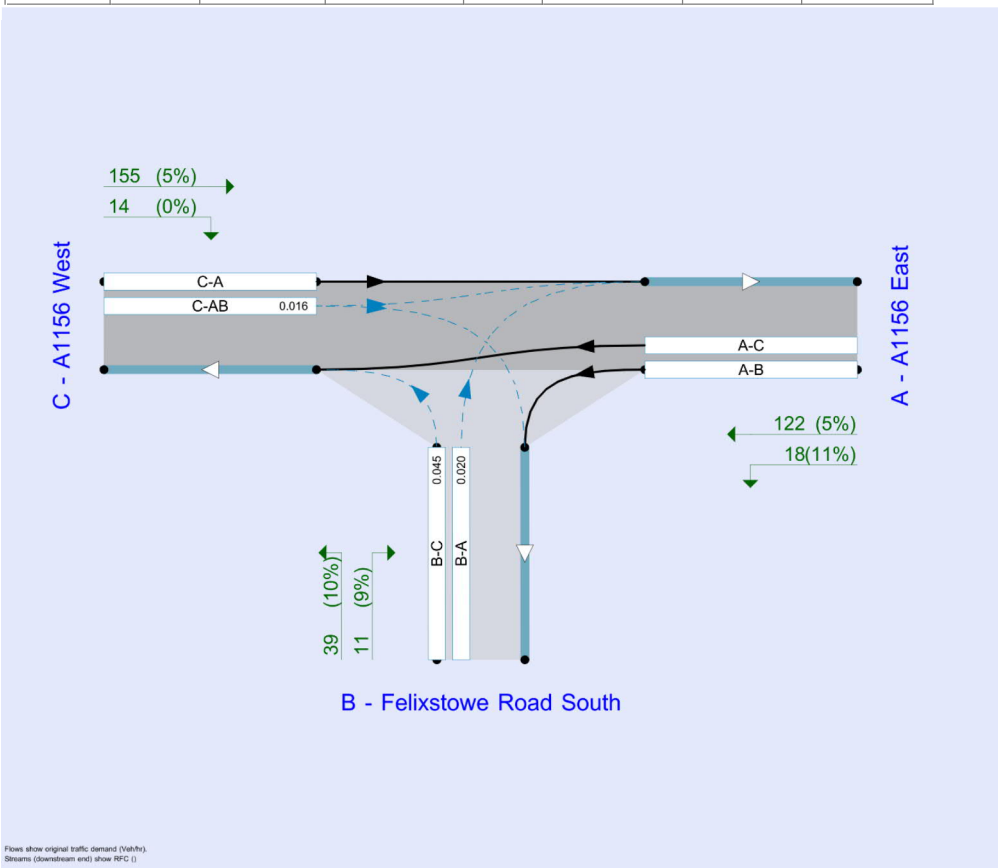

File summary

File Description

Title	A1156 / Felixstowe Road
Location	52.023204°, 1.247082°
Site number	41
Date	14/06/2019
Version	
Status	(new file)
Identifier	
Client	
Jobnumber	
Enumerator	CORPINJV01568
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin

Flows show original traffic demand (Veh/hr).
 Streams (downstream end) show RFC (l)
 The junction diagram reflects the last run of Junctions.

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
J41	A1156 / Felixstowe Road	T-Junction	Two-way		1.20	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	A1156 East		Major
B	Felixstowe Road South		Minor
C	A1156 West		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Width for right turn (m)	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - A1156 West	6.05		✓	3.20	91.0	✓	13.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B - Felixstowe Road South	One lane plus flare	10.00	8.80	6.20	5.10	4.60	✓	3.00	36	48

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	485	0.088	0.223	0.140	0.318
B-C	751	0.115	0.291	-	-
C-B	695	0.269	0.269	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	A12 / Tinker Brook
Location	52.185676°, 1.440916°
Site number	45
Date	22/08/2019
Version	
Status	(new file)
Identifier	
Client	
Jobnumber	
Enumerator	CORPINJV01568
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	mph	Veh	Veh	perHour	s	-Min	perMin

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically

Junction Network

Junctions

Junction	Name	Junction type	Use circulating lanes	Arm order	Junction Delay (s)	Junction LOS
J45	A12 / Tinker Brook	Standard Roundabout		A, D, C, B	3.88	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description
A	A12 East	
B	A12 West	
C	Tinker Brook South-West	
D	Bypass South-East	

Roundabout Geometry

Arm	V - Approach road half-width (m)	E - Entry width (m)	I' - Effective flare length (m)	R - Entry radius (m)	D - Inscribed circle diameter (m)	PHI - Conflict (entry) angle (deg)	Exit only
A - A12 East	3.70	4.00	10.0	27.7	60.0	24.0	
B - A12 West	3.60	7.40	17.1	52.4	60.0	20.0	
C - Tinker Brook South-West	3.30	4.50	13.2	20.4	60.0	15.0	
D - Bypass South-East	3.70	4.00	10.0	34.0	60.0	14.5	

Slope / Intercept / Capacity

Roundabout Slope and Intercept used in model

Arm	Final slope	Final intercept (PCU/hr)
A - A12 East	0.487	1245
B - A12 West	0.605	1878
C - Tinker Brook South-West	0.510	1349
D - Bypass South-East	0.506	1293

The slope and intercept shown above include any corrections and adjustments.

Scheme	Identified Problem	Location	Problem Summary	Recommendation	Designers Response
Sizewell Link Road	Alignment Problem 1	Location: A – Various along the SLR including the section between chainages 4400 & 5400.	<p>Risk of reduced forward visibility for drivers on the SLR.</p> <p>The proposed SLR is to be constructed using a number of cuttings, where the carriageway will have high embankments on either side. These embankments are likely to reduce forward visibility for drivers using the SLR which may increase the risk of shunt type collisions should vehicles be queuing or stationary ahead.</p>	It is recommended that stopping sight distances are maximised, especially so on approach to junctions where there is an increased risk of slowing or stationary traffic.	<p>The SLR alignment was originally designed for 85kph and 160m forward visibility splay. Thus, the design is compliant to this latter. However, further checks will be required following the RRRAP assessment and the introduction of VRS. Depending on the barriers' height and location (which is also related to the depth of the swale next to the carriageway), it is possible that local widenings will be required to achieve the forward visibility.</p> <p>The current design is based on Lidar data and OS Mapping. At the next stage of detailed design, FSSD will be checked so it's compliant with standards.</p>
Sizewell Link Road	Alignment Problem 2	Location: B – Chainage 3400	<p>Risk of vehicles leaving the carriageway and rolling down the embankment.</p> <p>The SLR at the location highlighted above appears to be located on a high embankment. If a vehicle were to lose control and leave the carriageway at this location there is a risk of an increase to the severity of any injuries suffered to the vehicle occupants due to the embankment height.</p>	It is recommended that all high embankments be protected by vehicle restraint systems.	RRRAP could not be carried out at the current stage due to 3D Topographical Survey information not being available. The design team recognises the need for RRRAP to be carried out when detailed survey information will come available at a further design stage. Mindful of this need, the design has already allocated for extra verge width to accommodate VRS.
Sizewell Link Road	Alignment Problem 3	Location: C – B1122/Middleton Moor Link road	<p>Risk of high vehicle speed and overshoot collisions.</p> <p>A new link road is proposed to link the SLR with the B1122 at Middleton Moor. The link road has a particularly straight alignment with a junction at each end and a proposed 100kph speed limit. There is a risk that the alignment of the link road will encourage high vehicle speeds and potentially lead to vehicles overshooting the give way/stop line at the junctions.</p>	It is recommended that measures are provided to help reduce vehicles speeds and adequate warning is provided to inform drivers of the junctions at either end of the link road.	Noted. Measures will be implemented at the next design stage.
Sizewell Link Road	Road Markings Problem 4	Location: D – Side road junctions at chainages 4100 and 5900	<p>Increased risk of collisions between vehicles waiting to turn into the side roads and other vehicles on the SLR.</p> <p>The SLR is constructed with several side road junctions, and many of these have a right turn lane proposed to provide a safe waiting area when turning into the side road. However, the two side roads as detailed above do not appear to have right turn lanes proposed. This is likely to increase the risk of a collision between a vehicle waiting to turn right into the side road and a vehicle continuing straight on the SLR.</p>	It is recommended that adequate provision is made on the SLR to allow for safe right turn manoeuvres into the side road junctions.	The current design includes right-turn lanes for all the T-junctions.

Scheme	Identified Problem	Location	Problem Summary	Recommendation	Designers Response
Two Village Bypass	Signing Problem 1	Location: A – New roundabout to the eastern end of the bypass	<p>Risk of high vehicle speeds causing overshoot or shunt type collisions at the proposed roundabout.</p> <p>Where the new bypass joins the A12 at the eastern end of the scheme, the A12 is in a rural environment (see Photo 1). Although there is currently a 50mph speed limit, it is a dual carriageway and drivers may not be expecting to encounter an at-grade roundabout in such a rural environment. This may lead to vehicle overshoot and shunt type collisions at the roundabout. There already appears to be a road safety issue at this location. There are existing 'Accident site' signs on the A12 approach to this junction.</p>	It is recommended that the roundabout be adequately signed in advance on the A12 and the location of the roundabout is made clear to drivers.	Recommendation is noted. This will be considered when the traffic sign design is undertaken.
Two Village Bypass	Signing Problem 2	Location: B – Public rights of ways crossing over the bypass.	<p>Risk of vehicles colliding with pedestrians crossing the bypass.</p> <p>The new bypass severs a number of public rights of way (PROW). Pedestrians using the PROWs are expected to cross over the bypass at-grade. There is a risk of collisions between vehicles and pedestrians on the bypass.</p>	It is recommended that adequate warning be provided for vehicles of the potential for pedestrians to be crossing the carriageway and that adequate visibility be provided to allow pedestrian to safely judge gaps in traffic prior to crossing.	Recommendation is noted. This will be considered when the traffic sign design is undertaken.
Yoxford Roundabout			No issues highlighted during RSA Stage 1	No issues highlighted during RSA Stage 1	No issues highlighted during RSA Stage 1
Freight Management Facility			No issues highlighted during RSA Stage 1	No issues highlighted during RSA Stage 1	No issues highlighted during RSA Stage 1
Darsham (Northern Park and Ride)	Alignment Problem 1	Location: A – Willow Marsh Lane East junction with Western Approach Park and Ride Access.	<p>Risk of agricultural vehicles being involved in head-on collisions and/or depositing mud onto the carriageway.</p> <p>The junction of Willow Marsh Lane East with Western Approach appears to be very narrow. Willow Marsh Lane provides access for agricultural vehicles to fields and barns (see Photo 1). Should the junction be of insufficient width, large vehicles could be forced to either encroach into the opposing traffic lanes which could result in head-on collisions or side swipe collisions. The large vehicles could also be forced to drive on the highway verge which may bring dirt and mud onto the carriageway which could increase the risk of a vehicle losing control.</p>	It is recommended that the Willow Marsh Lane East/Western Approach junction be of sufficient construction to accommodate the likely users.	The section highlighted is not a junction, but a "Direct Access" designed as per TD41/95 (now superseded by CD123). The access is expected to be used mainly by cyclists (national cycle route is retained on Willow Marsh Ln). White House Farm (building located on the A12, South-West of roundabout location) will still retain its main access on the A12 which will also grant right of way to all the surrounding fields (which however are included within the red line boundary). Thus, expected vehicular traffic flow is will be minimal and therefore, the risk of mud being brought onto the carriageway will also be minimal.

Scheme	Identified Problem	Location	Problem Summary	Recommendation	Designers Response
Darsham (Northern Park and Ride)	Signing Problem 2	Location: B – A12/Western Approach roundabout.	<p>Risk of drivers failing to correctly negotiate the roundabout.</p> <p>The proposed new roundabout at the junction of the A12 and Western Approach has three arms. Each arm has chevron signs and keep left signs to help guide drivers in the correct direction around the roundabout. However, whilst the two A12 arms have 2 chevron signs along with a keep left sign within the island, the Western Approach arm of the roundabout only has a single chevron sign proposed. This may increase the risk of a driver failing to identify the need to proceed to the left at the roundabout, potentially leading to a head-on collision.</p>	It is recommended that a minimum of two chevrons are provided along with the keep left arrow on each arm of the roundabout.	Recommendation is noted. This will be considered when the traffic sign design is undertaken.
Darsham (Northern Park and Ride)	Signing Problem 3	Location C – A12 Northbound Approach to roundabout	<p>Incorrect placement of signs.</p> <p>Existing speed limits change signage is shown to be installed on the 'old' line of the A12. This may result in drivers approaching the roundabout at excessive speeds and risk overshoot of the give way line and increased risk of collision. The visual 'gateway' created by the signage may also result in drivers heading towards them and entering the opposing traffic lane with risk of head on collision.</p>	It is recommended that the speed limit signage is installed on the realigned A12 approach towards the roundabout.	Unclear, further explanations required. The existing speed limit signs on the "old" A12 line are shown as "to be removed". Proposed speed limit change is now located on the A12 north of the roundabout.
B1078/B1079 Junction	Signing Problem 1	Location: A – Junction of the B1089 and the B1079.	<p>Risk of drivers overshooting the junction.</p> <p>The existing give way sign at the junction of the B1089 and the B1079 is partially masked by the speed limit signing (see Photo 1). Drivers approaching the junction from the west, have difficulty in seeing the sign, and the proposed give way sign is to be located in a similar location.</p> <p>Therefore, there is a risk of the new sign being obscured by the speed limit sign. This may increase the risk of drivers failing to identify the need to give way at this junction resulting in overshoot collisions with vehicles on the B1079.</p>	It is recommended that the give way sign be located so that it is clearly seen by approaching drivers and/or that an additional give way sign be located on the offside where it would be in the driver's eye-line.	Recommendation is noted. This will be considered when the traffic sign design is undertaken.
B1078/B1079 Junction	Signing Problem 2	Location: B – B1078 on approach to its junction with the B1079.	<p>Risk of drivers overshooting the junction.</p> <p>The proposals include replacing the existing advance give way signs. However, both advance give way signs display the same distance sub-plate of 100yds even though they are located at different distances from the give way markings. This may lead to drivers becoming confused as to the distance to the give way line resulting in overshoot collisions.</p>	It is recommended that the distance to hazard sub-plates of the advance give way signs be amended to show the correct distance to the give way line.	Recommendation is noted. This will be considered when the traffic sign design is undertaken.

Scheme	Identified Problem	Location	Problem Summary	Recommendation	Designers Response
A140/B1078 Junction	Signing Problem 1	Location: A – A140 southbound approach to its junction with the B1078	<p>Risk of vehicles entering the A140 into the path of other vehicles.</p> <p>Proposed advance directional sign (ADS) Diag. 2033, is to be provided on the A140 in advance of its junction with the B1078. The location of the sign (ADS furthest to the north) is to be positioned close to an existing field access and potentially within the visibility splay. This could restrict the view for drivers attempting to exit the field of vehicles approaching on the A140, increasing the risk of a collision.</p>	It is recommended that the ADS be positioned so it doesn't adversely affect drivers' visibility of other vehicles.	Sign to be relocated approx. 1.7m further from edge of carriageway to avoid clashes with a 160m – 2m set-back visibility splay (as per CD123 considering a design speed of 85kph). Sign location and installation feasibility to be assessed at detailed design stage.
A140/B1078 Junction	Signing Problem 2	Location: B – A140 southbound approach to its junction with the B1078	<p>Risk of drivers becoming confused as to the junction layout due to incorrect signage.</p> <p>Proposed warning signs Diag. 506.1R & 572 are a junction warning sign with supplementary distance plate to be located on the nearside and offside of the A140 on its southbound approach to the B1078 junction. However, the sign shows the side road of the junction to be to the right side of the main road and not the left side (as is the case). This could lead to driver confusion, late lane changes and braking manoeuvres resulting in shunt type collisions.</p>	It is recommended that the junction warning sign be amended to reflect the road layout.	Agreed, sign diag. 506.1R to be replaced by diag. 504.1.
A140/B1078 Junction	Signing Problem 3	Location: C – B1078 approach to the A140	<p>Risk of drivers failing to view the speed limit resulting in higher speeds.</p> <p>The existing 50mph/National Speed limit signs on the B1078 approach to the A140 junction are obscured by overgrown vegetation (see Photo 1). Should drivers fail to view the 50mph speed limit signs, it could result in higher vehicle speeds on the A140 increasing the risk of collisions.</p>	It is recommended that the vegetation be removed from the vicinity of the speed limit signs.	Agreed, drawings to include a note on vegetation clearance.
A12/A144 Junction	Road Markings Problem 1	Location: A – A12/A144 junction	<p>Risk of collisions between right turning vehicles.</p> <p>The proposed right turn waiting area for traffic entering or exiting the A144 has no road markings to help guide drivers as to where they should be positioned. A vehicle attempting a right turn out of the A144 may therefore position the vehicle within the central reserve whilst obstructing vehicles wishing to turn right into the A144. Also, without the provision of a safe waiting area for right turning vehicles out of the A144, drivers may become reluctant to perform the manoeuvre in two stages, instead attempting in a single manoeuvre where there is an increased risk of collisions.</p>	It is recommended that road markings be provided in the central reserve to help guide drivers.	Noted. Road markings are indicative at this stage. Traffic markings will be reviewed in light of this recommendation at detailed designed stage.
A12/A144 Junction	Signing Problem 2	Location: B – A12/A144 junction – private access onto A12.	<p>Risk of head-on collisions.</p> <p>There is a private access directly onto the A12 to the north of its junction with the A144 (see Photo 1). The private access is within the proposed section of A12 that has the traffic island within the central island. Should a vehicle exiting the private access turn right they would be travelling against the flow of traffic which could result in head-on collisions.</p>	It is recommended that appropriate directional signing be provided at the private access.	Noted. This will be considered when the detailed traffic sign design is undertaken.

Scheme	Identified Problem	Location	Problem Summary	Recommendation	Designers Response
B1119/A12 Junction			No issues highlighted during RSA Stage 1	No issues highlighted during RSA Stage 1	No issues highlighted during RSA Stage 1
A1094/B1069 Junction	Signing Problem 1	Location: A – Junction of the A1094 and the B1069	<p>Increased risk of collisions between turning vehicles.</p> <p>Although some vegetation clearance is proposed on the A1094, there does not appear to be any proposals for vegetation clearance on the B1069 approach to the junction with the A1094. There are a number of signs currently partially obscured by overgrown vegetation (see Photo 1) and the map type advance direction sign (ADS) is lying on the ground. If drivers fail to view the advance signing, there is an increased risk of a vehicle overshooting the give way line and colliding with a vehicle on the A1094.</p>	It is recommended that vegetation clearance be carried out on the B1069 and the ADS be re-erected.	Agreed, drawings to include a note on vegetation clearance.
Southern Park and Ride	Signing Problem 1	Location: A – A12 Northbound immediately after the offslip to the B1078	<p>Risk of drivers being unaware of the offside lane drop.</p> <p>As part of these junction improvement works, the offside lane drop on the A12 is to be relocated further to the south, just after the offslip to the B1078. The offside lane will be hatched with three 'tuck-in' arrows to help inform drivers of the need to move from the offside lane into the nearside.</p> <p>However, there doesn't appear to be any advance signage associated with the lane drop. If drivers are not notified of the lane drop in advance this could result in late lane change manoeuvres resulting in loss of control or side swipe collisions.</p>	It is recommended that adequate advance signage be provided of the lane drop.	Noted. Road markings are indicative at this stage. Traffic markings will be reviewed in light of this recommendation at detailed designed stage.
Southern Park and Ride	Road Markings Problem 2	Location: B – A12 northbound between the offslip and onslip.	<p>Increased risk of collisions at layby. The offside lane of the A12 is to be hatched-out from a point to the north of its offslip to the B1116.</p> <p>Immediately to the north of the start of the hatching, there is an existing layby. The layby is to remain following the improvement works. However, with the end of the offside lane of the A12 being so close to the layby, there is a risk of drivers merging into a single lane being unaware of the risk of vehicles either slowing to enter the layby or of vehicles exiting the layby, potentially at low speeds due to the gradients. This may increase the risk of collisions between vehicles on the A12 with vehicles entering or exiting the layby.</p>	It is recommended that the layby be closed or relocated.	Layby to be retained as per SCC requirements. The off-side lane is to be hatched off to its complete width prior the start of the layby. Therefore, at the layby location the carriageway is treated as a single carriageway and signs are erected to make drivers aware of the layby existence.
Southern Park and Ride	Alignment Problem 3	Location: C – A12 northbound onslip.	<p>Risk of vehicles colliding with power line poles.</p> <p>The park and ride scheme provides a new footway and crossing over the entry/exit from the proposed park and ride site. However, there is an existing power-line post within the proposed alignment of the footway and it will be very close to the edge of the diverge taper into the park and ride site (see Photo 1). Should these posts be subject to a collision with a passing vehicle, the electricity power line could fall to the ground and come into contact with other road users. The poles may also obstruct pedestrian movement on the footway, forcing pedestrians into the deceleration lane with risk of collision from traffic.</p>	It is recommended that power line posts be protected or relocated.	Noted. Liaison with Statutory undertakers will be carried out at the next stage of design and agreement on a suitable solution considering the recommendation.

Scheme	Identified Problem	Location	Problem Summary	Recommendation	Designers Response
Bridleway 19	Walkers, Cyclists & Horse Riders Problem 1	Location: A – Bridleway crossing at the Lovers Lane / B1122 junction.	<p>Risk that the bridleway pen will reduce visibility for road users.</p> <p>Bridleway 19 is to cross over the B1122 to the south of its junction with Lovers Lane. The bridleway crossing has pens, consisting of post and rail fencing, on either side of the B1122 to provide a safe waiting area for horse riders. Due to the close proximity of the bridleway crossing to the Lovers Lane junction, there is a risk that the pen may restrict visibility for drivers attempting to exit Lovers Lane onto the B1122 resulting in a collision.</p>	It is recommended that the bridleway pens be located / constructed so they do not restrict visibility for other road users.	Agreed. Form of bridleway pen to be developed at next design stage
Bridleway 19	Walkers, Cyclists & Horse Riders Problem 2	Location: B – Bridleway crossing at the Lovers Lane / B1122 junction.	<p>Risk that drivers existing Lovers Lane will fail to stop for horse riders crossing.</p> <p>Bridleway 19 is to cross over the B1122 to the south of its junction with Lovers Lane. The bridleway crossing is a Pegasus crossing, requiring road users to stop when faced with a red traffic signal, allowing horse riders to cross. However, due to the close proximity of the crossing to the Lovers Lane junction, there is a risk of drivers exiting Lovers Lane and turning left, failing to identify the crossing resulting in a red-light violation and potentially colliding with horse riders crossing the B1122. Visibility at the junction may be further compromised due to Lovers Lane being within a cutting on the approach to the B1122.</p>	It is recommended that drivers on Lovers Lane are made aware of the Pegasus crossing on the B1122 and it can clearly be seen from the Lovers Lane junction.	Agreed. Advance signage Pegasus crossing for left turners to be provided on Lovers Lane. Current Earthworks design permits clear visibility of pen at junction.
Bridleway 19	Walkers, Cyclists & Horse Riders Problem 3	Location: C – Proposed bridleway between the north and western arms of the proposed Main Site Access roundabout.	<p>Risk of walkers, cyclists and horse riders falling down embankment at rear of facility.</p> <p>The proposed bridleway guides walkers, cyclists and horse riders between the north and western arms of the new roundabout. The bridleway is 3 metres in width, with an embankment adjacent to its northern edge. The narrow width of the facility (considering all users can utilise this facility) combined with the close proximity to the top of the embankment could lead to a walker, cyclist and horse rider falling down the embankment resulting in injury.</p>	It is recommended that either the Bridleway be widened (potential for widening shown on drawings) or a post and rail fence be provided at the top of the embankment.	Agreed. Bridleway to be moved towards roundabout and away from embankment on section to north of roundabout. Section to west or roundabout provided with post and rail fence.
Bridleway 19	Walkers, Cyclists & Horse Riders Problem 4	Location: Various– Bridleway crossings and on-street sections of Bridleway.	<p>Risk to drivers failing to realise the possibility of horse riders crossing the carriageway or riding within / adjacent to the carriageway.</p> <p>There are a number of Pegasus crossings proposed as part of Bridleway 19. Due to the rural nature of the area, drivers may not be expecting a signalised crossing and be slow to react to the red signal. Also, the Bridleway has an on-street section at Sandy Lane where horse riders and other road users will be forced to share the carriageway space. In addition, the Bridleway is very close to the edge of carriageway where it crosses the level crossing on the B1122 and horses may become spooked should a vehicle pass too close or at high speeds.</p>	It is recommended that warning signs are provided in advance of any section of Bridleway which crosses a carriageway or where horse-riders are forced to ride along a carriageway or horse riders are unsegregated from passing traffic.	<p>Provision of advance warning signs on existing highways (unaltered) i.e. B1122, Abbey Lane where Pegasus crossings are proposed to be discussed with local highways authority at detailed design stage. Required locations of signs would be outside the red-line boundary.</p> <p>Unable to practically avoid close proximity of horses and vehicles at B1122 level crossing.</p>

Scheme	Identified Problem	Location	Problem Summary	Recommendation	Designers Response
Bridleway 19	Walkers, Cyclists & Horse Riders Problem 5	Location D – B1122 Abbey Road	<p>New residential development access not considered within scheme design.</p> <p>There is a new residential development and associated access on the west side of B1122 Abbey Road, close to the location of the realigned Lovers Lane junction. This is not shown on the design drawings nor was sufficient information available to determine the geometry of the possible staggered cross roads during the site visit. The bridleway will cross the new junction, although how this will be achieved has not been addressed. Without holding pens at the bellmouth crossing there is risk of collision between equestrians, cyclists and pedestrians, or riders losing control of horses and their entering the road in front of traffic.</p>	It is recommended that the bridleway design be amended to include safe crossing of the new development access and new Lovers Lane junction be designed taking into account the new development access to help avoid any safety related issues involving turning vehicles.	It is understood that the development will make use of an existing private access located directly to the south of the Pegasus crossing. Therefore the entrance will not be crossed by the bridleway and will not form a cross roads with the new Lovers Lane junction.
Buckleswood Road Level Crossing			No issues highlighted during RSA Stage 1	No issues highlighted during RSA Stage 1	No issues highlighted during RSA Stage 1
GRR Level Crossing	Signing Problem 1	Location: A – B1122 southbound approach to crossing.	<p>Risk of crossing signals being obscured by parked vehicles.</p> <p>The level crossing is due to have a set of signals on either side to inform drivers of the need to stop when a train is approaching and the barriers are to be closed. However, the signals on the southbound carriageway are located in close proximity to a maintenance parking bay. If a high sided vehicle were to be parked in the maintenance bay, it may obscure drivers' view of the signals, increasing the risk of vehicles failing to stop when a train is approaching/crossing the road.</p>	It is recommended that the signals can be clearly viewed by drivers on approach to the crossing.	To be considered in signals detailed design.
King Georges Avenue / Valley Road	Walkers, Cyclists and Horse Riders Problem 1	Location: A – Footway/cycleway through the Big Field	<p>Footway/cycleway width may cause collisions between users.</p> <p>There is a proposed footway/cycleway from Valley Road to the north through the Big Field. The facility is 1.5m in width for two-way cycle and pedestrian usage. This narrow width may be insufficient to allow cyclists and pedestrians to pass each other safely, increasing the risk of collision between the users.</p>	It is recommended that the footway/cycleway be of sufficient width to allow users to safely pass each other.	Width of footway to be appraised at detailed design.
Lovers Lane	Walkers, Cyclists and Horse Riders Problem 1	Location: A – Bridleway crossing at the Lovers Lane / B1122 junction.	<p>Risk that the bridleway pen will reduce visibility for road users.</p> <p>Bridleway 19 is to cross over the B1122 to the south of its junction with Lovers Lane. The bridleway crossing has pens, consisting of post and rail fencing, on either side of the B1122 to provide a safe waiting area for horse riders. Due to the close proximity of the bridleway crossing to the Lovers Lane junction, there is a risk that the pen may restrict visibility for drivers attempting to exit Lovers Lane onto the B1122 resulting in a collision.</p>	It is recommended that the bridleway pens be located/constructed so they do not restrict visibility for other road users.	Agreed. Form of bridleway pen to be developed at next design stage.

Scheme	Identified Problem	Location	Problem Summary	Recommendation	Designers Response
Lovers Lane	Walkers, Cyclists and Horse Riders Problem 2	Location: B – Bridleway crossing at the Lovers Lane / B1122 junction.	<p>Risk that drivers exiting Lovers Lane will fail to stop for horse riders crossing.</p> <p>Bridleway 19 is to cross over the B1122 to the south of its junction with Lovers Lane. The bridleway crossing is a Pegasus crossing, requiring road users to stop when faced with a red traffic signal, allowing horse riders to cross. However, due to the close proximity of the crossing to the Lovers Lane junction, there is a risk of drivers exiting Lovers Lane and turning left, failing to identify the crossing resulting in a red-light violation and potentially colliding with horse riders crossing the B1122. Visibility at the junction may be further compromised due to Lovers Lane being within a cutting on the approach to the B1122.</p>	It is recommended that drivers on Lovers Lane are made aware of the Pegasus crossing on the B1122 and that it can clearly be seen from the Lovers Lane junction.	Agreed. Advance signage Pegasus crossing for left turners to be provided on Lovers Lane. Current Earthworks design permits clear visibility of pen at junction.
Lovers Lane	Walkers, Cyclists and Horse Riders Problem 3	Location D – B1122 Abbey Road	<p>New residential development access not considered within scheme design.</p> <p>There is a new residential development and associated access on the west side of B1122 Abbey Road, close to the location of the realigned Lovers Lane junction. This is not shown on the design drawings nor was sufficient information available to determine the geometry of the possible staggered cross roads during the site visit. The bridleway will cross the new junction, although how this will be achieved has not been addressed. Without holding pens at the bellmouth crossing there is risk of collision between equestrians, cyclists and pedestrians, or riders losing control of horses and their entering the road in front of traffic.</p>	It is recommended that the bridleway design be amended to include safe crossing of the new development access and new Lovers Lane junction be designed taking into account the new development access to help avoid any safety related issues involving turning vehicles.	It is understood that the development will make use of an existing private access located directly to the south of the Pegasus crossing. Therefore the entrance will not be crossed by the bridleway and will not form a cross roads with the new Lovers Lane junction.
Lovers Lane	Signs Problem 4	Location: C – Recycle centre on Lovers Lane	<p>Increased risk of collisions between traffic on Lovers Lane and queuing traffic.</p> <p>There is an existing Recycle Centre on Lovers Lane (see Photo 1). The Recycle Centre appears to suffer from queuing traffic (due to existing 'Queues Likely Ahead' signs and observations on site). With traffic flows likely to increase due to the Sizewell project, there is an increased risk of vehicles travelling along Lovers Lane colliding with the rear of stationary traffic waiting to turn into the Recycle Centre. This issue is compounded due to the Recycle Centre being sited in a location which is not clearly identifiable for northbound traffic and is over the crest of a summit. Any queues are, therefore, unlikely to be seen until a driver passes over the summit. Whilst a 'left turn in' taper is proposed to help alleviate the queuing southbound into the Recycle Centre, a right turn island is not proposed for northbound traffic wishing to turn right into the centre. The increased traffic levels are likely to increase the risk of vehicles on Lovers Lane colliding with stationary traffic at the Recycle Centre.</p>	It is recommended that a right turn lane be provided to provide a safe waiting area for vehicles waiting to turn right into the Recycle Centre.	Traffic data indicates very little northbound traffic turning right into the recycle centre. It is proposed to prohibit entrance into the recycle centre from the south with the provision of a no right hand turn sign and amendment to the junction layout which will allow drivers to exit only.

Scheme	Identified Problem	Location	Problem Summary	Recommendation	Designers Response
Main Site Access	Walkers, Cyclists and Horse Riders Problem 1	Location: A – Proposed bridleway between the north and western arms of the roundabout.	<p>Risk of walkers, cyclists and horse riders (WC&HRs) falling down embankment at rear of facility.</p> <p>The proposed bridleway guides WC&HRs between the north and western arms of the new roundabout. The bridleway is 3 metres in width, with an embankment adjacent to its northern edge. The narrow width of the route (considering all users can utilise this facility) combined with the close proximity to the top of the embankment could lead to a WC&HR falling down the embankment resulting in injury.</p>	It is recommended that either the Bridleway be widened (potential for widening shown on drawings) or a post and rail fence be provided at the top of the embankment.	Agreed. Bridleway to be moved towards roundabout and away from embankment on section to north of roundabout. Section to west of roundabout provided with post and rail fence.

Report title:	<i>Sizewell C - Two Village Bypass Stage 1 Road Safety Audit</i>
Date:	<i>September 2019</i>
Document reference and revision:	<i>50400326/2019/Ref5</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the Sizewell C - *Two Village Bypass* scheme on behalf of Steve Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steve Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steve Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Monday 23rd September 2019 between 3pm – 4pm. The weather was fine with sunny spells. The road surface was dry during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. Departures on some of the approaches to the roundabout were required to achieve a better deflection within the available red line boundary.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

This aspect of the scheme consists of a new bypass on the A12 (Two Village Bypass, 2VBP) which will tie back in to the existing network via two new roundabouts (named eastern and western roundabout). A side road around the centre of the bypass will be diverted and linked to 2VBP via a left/right staggered T-Junction.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

3.1. SIGNING

3.2. PROBLEM 1

Location: A – New roundabout to the eastern end of the bypass

Summary: Risk of high vehicle speeds causing overshoot or shunt type collisions at the proposed roundabout.

Where the new bypass joins the A12 at the eastern end of the scheme, the A12 is in a rural environment (See Photo1). Although there is currently a 50mph speed limit, it is a dual carriageway and drivers may not be expecting to encounter an at-grade roundabout in such a rural environment. This may lead to vehicle overshoot and shunt type collisions at the roundabout. There already appears to be a road safety issue at this location. There are existing 'Accident site' signs on the A12 approach to this junction.

Photo 1 – View of A12 southbound approach to proposed roundabout

RECOMMENDATION:

It is recommended that the roundabout be adequately signed in advance on the A12 and the location of the roundabout is made clear to drivers.

3.3. PROBLEM 2

Location: B – Public rights of ways crossing over the bypass.

Summary: Risk of vehicles colliding with pedestrians crossing the bypass.

The new bypass severs a number of public rights of way (PROW). Pedestrians using the PROWs are expected to cross over the bypass at-grade. There is a risk of collisions between vehicles and pedestrians on the bypass.

RECOMMENDATION:

It is recommended that adequate warning be provided for vehicles of the potential for pedestrians to be crossing the carriageway and that adequate visibility be provided to allow pedestrian to safely judge gaps in traffic prior to crossing.

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the Sizewell C - A1094/B1069 Junction scheme on behalf of Steve Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steve Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steve Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Monday 23rd September 2019 between 3:30pm – 5pm. The weather was fine with sunny spells. The road surface was dry during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. The audit team were not notified of any departures from standards.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

This aspect of the scheme consists of highway improvements to the A1094/B1069 junction. These consist of lowering the speed limit to 40mph, refreshing the carriageway markings and signing improvements.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

3.1. SIGNING

3.2. PROBLEM 1

Location: A – Junction of the A1094 and the B1069

Summary: Increased risk of collisions between turning vehicles.

Although some vegetation clearance is proposed on the A1094, there does not appear to be any proposals for vegetation clearance on the B1069 approach to the junction with the A1094. There are a number of signs currently partially obscured by overgrown vegetation (see Photo 1) and the map type advance direction sign (ADS) is lying on the ground. If drivers fail to view the advance signing, there is an increased risk of a vehicle overshooting the give way line and colliding with a vehicle on the A1094.

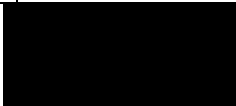

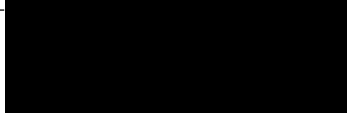

RECOMMENDATION:

It is recommended that vegetation clearance be carried out on the B1069 and the ADS be re-erected.

Photo 1 – Advance give way signs on approach to the junction

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

1. PROJECT DETAILS

Report title:	<i>Sizewell C – A12/A144 Junction Stage 1 Road Safety Audit</i>
Date:	<i>October 2019</i>
Document reference and revision:	<i>50400326/2019/Ref10</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the *Sizewell C – A12/A144 Junction* scheme on behalf of Steven Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steven Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steven Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Tuesday 24th September 2019 between 10am – 11am. The weather was heavy rain. The road surface was wet with some ponding during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. *The design of the junction on its approaching minor road has been adapted to the existing and available space, considering the constraint of the Thorington Holiday cottages edges, in order to avoid the limits of this property. (copied from Brief)*

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

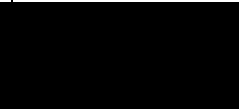

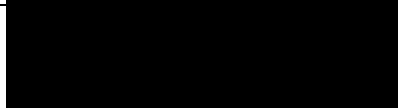

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

This aspect of the scheme consists of new traffic islands, improvements to drainage and carriageway markings at the junction of the A12 and A144.

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

Report title:	<i>Sizewell C - B1119/A12 Junction Stage 1 Road Safety Audit</i>
Date:	<i>September 2019</i>
Document reference and revision:	<i>50400326/2019/Ref7</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the Sizewell C - B1119/A12 Junction scheme on behalf of Steve Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steve Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steve Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Monday 23rd September 2019 between 4:30pm – 5:30pm. The weather was fine with sunny spells. The road surface was dry during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. The audit team were not notified of any departures from standards.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

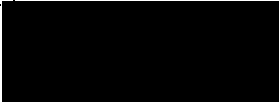

This aspect of the scheme consists of highway improvements to the B1119/A12 junction. These consist of changes to the carriageway markings, kerb lines and gullies.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

There were no Road Safety Issues raised during the Stage 1 Road Safety Audit.

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the Sizewell C - A140/B1078 Junction scheme on behalf of Steve Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steve Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steve Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Monday 23rd September 2019 between 1pm – 2pm. The weather was fine with sunny spells. The road surface was dry during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. The audit team were not notified of any departures from standards.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

This aspect of the scheme consists of highway improvements to the A140/B1078 junction. These consist of signing and road marking alterations on the A140 approach to the junction.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

3.1. SIGNING

3.2. PROBLEM 1

Location: A – A140 southbound approach to its junction with the B1078

Summary: Risk of vehicles entering the A140 into the path of other vehicles

Proposed advance directional sign (ADS) Diag. 2033, is to be provided on the A140 in advance of its junction with the B1078. The location of the sign (ADS furthest to the north) is to be positioned close to an existing field access and potentially within the visibility splay. This could restrict the view for drivers attempting to exit the field of vehicles approaching on the A140, increasing the risk of a collision.

RECOMMENDATION:

It is recommended that the ADS be positioned so it doesn't adversely affect drivers' visibility of other vehicles.

3.3. PROBLEM 2

Location: B – A140 southbound approach to its junction with the B1078

Summary: Risk of drivers becoming confused as to the junction layout due to incorrect signage.

Proposed warning signs Diag. 506.1R & 572 are a junction warning sign with supplementary distance plate to be located on the nearside and offside of the A140 on its southbound approach to the B1078 junction. However, the sign shows the side road of the junction to be to the right side of the main road and not the left side (as is the case). This could lead to driver confusion, late lane changes and braking manoeuvres resulting in shunt type collisions.

RECOMMENDATION:

It is recommended that the junction warning sign be amended to reflect the road layout.

3.4. PROBLEM 3

Location: C –B1078 approach to the A140

Summary: Risk of drivers failing to view the speed limit resulting in higher speeds.

The existing 50mph/National Speed limit signs on the B1078 approach to the A140 junction are obscured by overgrown vegetation (see Photo 1). Should drivers fail to view the 50mph speed limit signs, it could result in higher vehicle speeds on the A140 increasing the risk of collisions.

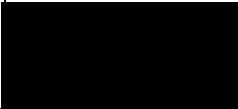

RECOMMENDATION:

It is recommended that the vegetation be removed from the vicinity of the speed limit signs.

Photo 1 – View of speed limit signs

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

1. PROJECT DETAILS

Report title:	<i>Sizewell C - B1078/B1079 Junction Stage 1 Road Safety Audit</i>
Date:	<i>September 2019</i>
Document reference and revision:	<i>50400326/2019/Ref2</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the Sizewell C - B1078/B1079 Junction scheme on behalf of Steve Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steve Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng,MICE,MCIHT,MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steve Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Monday 23rd September 2019 between 1:15pm – 2pm. The weather was fine with sunny spells. The road surface was dry during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. The set-back visibility splay on a junction for 100kph should be 215m, 160m being one step below desirable minimum. 120m represents two steps below and 90m three steps below.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

This aspect of the scheme consists of highway improvements to the B1078/B1079 junction. These consist of signing and road marking alterations.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

3.1. SIGNING

3.2. PROBLEM 1

Location: A – Junction of the B1089 and the B1079.

Summary: Risk of drivers overshooting the junction.

The existing give way sign at the junction of the B1089 and the B1079 is partially masked by the speed limit signing (see Photo 1). Drivers approaching the junction from the west, have difficulty in seeing the sign, and the proposed give way sign is to be located in a similar location. Therefore, there is a risk of the new sign being obscured by the speed limit sign. This may increase the risk of drivers failing to identify the need to give way at this junction resulting in overshoot collisions with vehicles on the B1079.

Photo 1 – View of the give way sign obscured by the speed limit signs

RECOMMENDATION:

It is recommended that the give way sign be located so that it is clearly seen by approaching drivers and/or that an additional give way sign be located on the offside where it would be in the driver's eye-line.

3.3. PROBLEM 2

Location: B – B1078 on approach to its junction with the B1079.

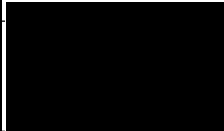

Summary: Risk of drivers overshooting the junction.

The proposals include replacing the existing advance give way signs. However, both advance give way signs display the same distance sub-plate of 100yds even though they are located at different distances from the give way markings. This may lead to drivers becoming confused as to the distance to the give way line resulting in overshoot collisions.

RECOMMENDATION:

It is recommended that the distance to hazard sub-plates of the advance give way signs be amended to show the correct distance to the give way line.

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

1. PROJECT DETAILS

Report title:	<i>Sizewell C – Bridleway 19 Stage 1 Road Safety Audit</i>
Date:	<i>October 2019</i>
Document reference and revision:	<i>50400326/2019/Ref18</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the *Sizewell C – Bridleway 19* scheme on behalf of Steven Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steven Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steven Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Tuesday 24th September 2019 between 12:30pm – 1:30pm. The weather was raining with sunny spells. The road surface was wet during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. The Pegasus crossing on B1122 immediately to the south of the relocated Lovers Lane Junction may be considered to be a departure from standard with the signals positioned less than 25m from the junction.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

Bridleway 19 provides a new pedestrian / cycleway and equestrian link from Sizewell GAP / Lovers Lane (starting to the east of the junction with King Georges Avenue) through to the junction of Roundhouse Lane on Eastbridge Road via the B1122 Abbey Road. The proposal is intended to provide a non-motorised user (NMU) route separated from Lovers Lane and B1122 which will be subject to increased traffic including Heavy Goods Vehicles (HGVs) during the Sizewell C expansion construction phase. The scheme also includes the diversion of the Public Right of Way in the fields to the west of the GRR. Whilst being separated from public highways for the most part the NMU route interfaces with the highways as follows;

- 1) Pegasus crossing of Eastbridge Road and B1122 in close proximity to the Main Site Access roundabout on the B1122.
- 2) Uncontrolled crossing of the access road to Leiston Abbey off B1122 Abbey Road.
- 3) Uncontrolled crossing of Abbey Lane at the junction with B1122
- 4) Crossing of the proposed GRR level crossing on the B1122 to the north of the (relocated) Lovers Lane junction.
- 5) Pegasus crossing of the B1122 to the south of the (relocated) Lovers Lane junction
- 6) Pegasus crossing on Lovers Lane to the north of the cross roads with Sandy Lane / Valley Road.
- 7) Pedestrian / cycle link to the temporary worker site access on Valley Road requiring uncontrolled crossings of Valley Road and field access.
- 8) Uncontrolled crossing on Sizewell Gap at southern termination of route.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

3.1. WALKERS, CYCLISTS AND HORSE RIDERS

3.2. PROBLEM 1

Location: A – Bridleway crossing at the Lovers Lane / B1122 junction.

Summary: Risk that the bridleway pen will reduce visibility for road users.

Bridleway 19 is to cross over the B1122 to the south of its junction with Lovers Lane. The bridleway crossing has pens, consisting of post and rail fencing, on either side of the B1122 to provide a safe waiting area for horse riders. Due to the close proximity of the bridleway crossing to the Lovers Lane junction, there is a risk that the pen may restrict visibility for drivers attempting to exit Lovers Lane onto the B1122 resulting in a collision.

RECOMMENDATION:

It is recommended that the bridleway pens be located / constructed so they do not restrict visibility for other road users.

3.3. PROBLEM 2

Location: B – Bridleway crossing at the Lovers Lane / B1122 junction.

Summary: Risk that drivers existing Lovers Lane will fail to stop for horse riders crossing.

Bridleway 19 is to cross over the B1122 to the south of its junction with Lovers Lane. The bridleway crossing is a Pegasus crossing, requiring road users to stop when faced with a red traffic signal, allowing horse riders to cross. However, due to the close proximity of the crossing to the Lovers Lane junction, there is a risk of drivers exiting Lovers Lane and turning left, failing to identify the crossing resulting in a red-light violation and potentially colliding with horse riders crossing the B1122. Visibility at the junction may be further compromised due to Lovers Lane being within a cutting on the approach to the B1122.

RECOMMENDATION:

It is recommended that drivers on Lovers Lane are made aware of the Pegasus crossing on the B1122 and it can clearly be seen from the Lovers Lane junction.

3.4. PROBLEM 3

Location: C – Proposed bridleway between the north and western arms of the proposed Main Site Access roundabout.

Summary: Risk of walkers, cyclists and horse riders falling down embankment at rear of facility.

The proposed bridleway guides walkers, cyclists and horse riders between the north and western arms of the new roundabout. The bridleway is 3 metres in width, with an embankment adjacent to its northern edge. The narrow width of the facility (considering all users can utilise this facility) combined with the close proximity to the top of the embankment could lead to a walker, cyclist and horse rider falling down the embankment resulting in injury.

RECOMMENDATION:

It is recommended that either the Bridleway be widened (potential for widening shown on drawings) or a post and rail fence be provided at the top of the embankment.

3.5. PROBLEM 4

Location: Various– Bridleway crossings and on-street sections of Bridleway.

Summary: Risk to drivers failing to realise the possibility of horse riders crossing the carriageway or riding within / adjacent to the carriageway.

There are a number of Pegasus crossings proposed as part of Bridleway 19. Due to the rural nature of the area, drivers may not be expecting a signalised crossing and be slow to react to the red signal. Also, the Bridleway has an on-street section at Sandy Lane where horse riders and other road users will be forced to share the carriageway space. In addition, the Bridleway is very close to the edge of carriageway where it crosses the level crossing on the B1122 and horses may become spooked should a vehicle pass too close or at high speeds.

RECOMMENDATION:

It is recommended that warning signs are provided in advance of any section of Bridleway which crosses a carriageway or where horse-riders are forced to ride along a carriageway or horse riders are unsegregated from passing traffic.

3.6. PROBLEM 5

Location D – B1122 Abbey Road

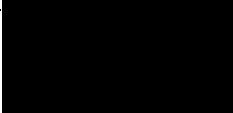

Summary: New residential development access not considered within scheme design

There is a new residential development and associated access on the west side of B1122 Abbey Road, close to the location of the realigned Lovers Lane junction. This is not shown on the design drawings nor was sufficient information available to determine the geometry of the possible staggered cross roads during the site visit. The bridleway will cross the new junction, although how this will be achieved has not been addressed. Without holding pens at the bellmouth crossing there is risk of collision between equestrians, cyclists and pedestrians, or riders losing control of horses and their entering the road in front of traffic.

RECOMMENDATION:

It is recommended that the bridleway design be amended to include safe crossing of the new development access and new Lovers Lane junction be designed taking into account the new development access to help avoid any safety related issues involving turning vehicles.

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

Report title:	<i>Sizewell C – Buckleswood Road Level Crossing Stage 1 Road Safety Audit</i>
Date:	<i>October 2019</i>
Document reference and revision:	<i>50400326/2019/Ref17</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the *Sizewell C – Buckleswood Road Level Crossing* scheme on behalf of Steven Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steven Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steven Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Tuesday 24th September 2019 between 1pm – 2pm. The weather was raining. The road surface was wet during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. The audit team were not notified of any departures from standards.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

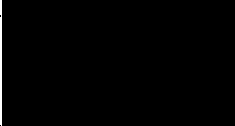

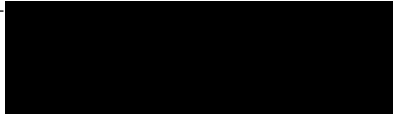

The GRR will cross the existing Buckleswood Road highway to the northwest of Leiston village. Modifications to the existing carriageway include local widening either side of the level crossing to achieve 5.0m width at the signalised level crossing. The level crossing will be elevated above the existing road level to accommodate drainage and therefore the regrading of the approach roads will be required. No changes to the road geometry are proposed other than those discussed above.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

There were no road safety issues identified during the Stage 1 Road Safety Audit

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

Report title:	<i>Sizewell C – Darsham Northern Park and Ride Stage 1 Road Safety Audit</i>
Date:	<i>October 2019</i>
Document reference and revision:	<i>50400326/2019/Ref9</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the *Sizewell C – Darsham Northern Park and Ride* scheme on behalf of Steven Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steven Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steven Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Tuesday 24th September 2019 between 9am – 10am. The weather was raining. The road surface was wet during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. The audit team was notified of departures on the western approach to the roundabout to achieve better deflection within the available red line boundary.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

This aspect of the scheme consists of a new at-grade roundabout on the A12 to provide access to the Darsham Park and Ride facility.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

3.1. ALIGNMENT

3.2. PROBLEM 1

Location: A – Willow Marsh Lane East junction with Western Approach Park and Ride Access.

Summary: Risk of agricultural vehicles being involved in head-on collisions and/or depositing mud onto the carriageway.

The junction of Willow Marsh Lane East with Western Approach appears to be very narrow. Willow Marsh Lane provides access for agricultural vehicles to fields and barns (see Photo 1). Should the junction be of insufficient width, large vehicles could be forced to either encroach into the opposing traffic lanes which could result in head-on collisions or side swipe collisions. The large vehicles could also be forced to drive on the highway verge which may bring dirt and mud onto the carriageway which could increase the risk of a vehicle losing control.

Photo 1 – Willow Marsh Lane

RECOMMENDATION:

It is recommended that the Willow Marsh Lane East/Western Approach junction be of sufficient construction to accommodate the likely users.

3.3. SIGNING

3.4. PROBLEM 2

Location: B – A12/Western Approach roundabout.

Summary: Risk of drivers failing to correctly negotiate the roundabout.

The proposed new roundabout at the junction of the A12 and Western Approach has three arms. Each arm has chevron signs and keep left signs to help guide drivers in the correct direction around the roundabout. However, whilst the two A12 arms have 2 chevron signs along with a keep left sign within the island, the Western Approach arm of the roundabout only has a single chevron sign proposed. This may increase the risk of a driver failing to identify the need to proceed to the left at the roundabout, potentially leading to a head-on collision.

RECOMMENDATION:

It is recommended that a minimum of two chevrons are provided along with the keep left arrow on each arm of the roundabout.

3.5. PROBLEM 3

Location C – A12 Northbound Approach to roundabout

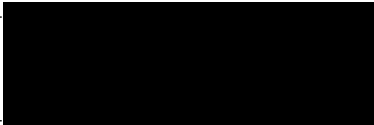

Summary: Incorrect placement of signs

Existing speed limits change signage is shown to be installed on the 'old' line of the A12. This may result in drivers approaching the roundabout at excessive speeds and risk overshoot of the give way line and increased risk of collision. The visual 'gateway' created by the signage may also result in drivers heading towards them and entering the opposing traffic lane with risk of head on collision.

RECOMMENDATION:

It is recommended that the speed limit signage is installed on the realigned A12 approach towards the roundabout.

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

Report title:	<i>Sizewell C - Freight Management Facility Stage 1 Road Safety Audit</i>
Date:	<i>September 2019</i>
Document reference and revision:	<i>50400326/2019/Ref4</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the Sizewell C - *Freight Management Facility Ride* scheme on behalf of Steve Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steve Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steve Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Monday 23rd September 2019 between 2:30pm – 3:30pm. The weather was fine with sunny spells. The road surface was dry during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. The audit team were not notified of any departures from standards.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

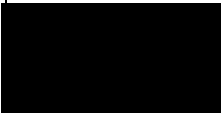

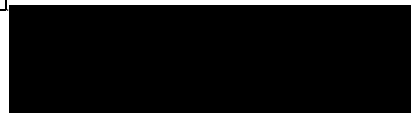

This aspect of the scheme consists of highway improvements to Felixstowe Road. These consist of a new junction with associated road marking improvements on Felixstowe Road.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

There were no road safety issues during this Stage 1 Road Safety Audit

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

Report title:	<i>Sizewell C – GRR Level Crossing Stage 1 Road Safety Audit</i>
Date:	<i>October 2019</i>
Document reference and revision:	<i>50400326/2019/Ref16</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the *Sizewell C – GRR Level Crossing* scheme on behalf of Steven Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steven Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steven Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Tuesday 24th September 2019 between 12:30pm – 13:30pm. The weather was raining with sunny spells. The road surface was wet during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. The audit team were not notified of any departures from standards.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

The GRR will cross the existing B1122 highway to the north of Leiston village on-route to the Sizewell C construction site. Modifications are required to the B1122 to construct a signalised level crossing including the raising of the road level at the crossing point by 1.5m to 10m AOD. The horizontal geometry of the road is relatively unaffected. The GRR Level crossing location clashes with the existing junction to Lovers Lane. The Lovers Lane junction is to be relocated 80m to the south of the crossing (refer to Lovers Lane Safety RSA brief 50400326-GG119-LL1). In addition, Bridleway 19 will cross the B1122 to the south of the new Lovers Lane Junction and continue to the west of the B1122, including across the Level Crossing.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

3.1. SIGNING

3.2. PROBLEM 1

Location: A – B1122 southbound approach to crossing.

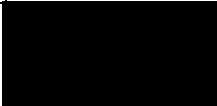

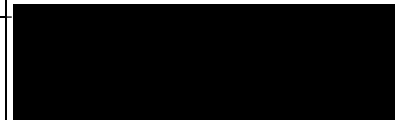

Summary: Risk of crossing signals being obscured by parked vehicles.

The level crossing is due to have a set of signals on either side to inform drivers of the need to stop when a train is approaching and the barriers are to be closed. However, the signals on the southbound carriageway are located in close proximity to a maintenance parking bay. If a high sided vehicle were to be parked in the maintenance bay, it may obscure drivers' view of the signals, increasing the risk of vehicles failing to stop when a train is approaching/crossing the road.

RECOMMENDATION:

It is recommended that the signals can be clearly viewed by drivers on approach to the crossing.

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

Report title:	<i>Sizewell C – King Georges Avenue/Valley Road Stage 1 Road Safety Audit</i>
Date:	<i>October 2019</i>
Document reference and revision:	<i>50400326/2019/Ref14</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the *Sizewell C – King Georges Avenue/Valley Road* scheme on behalf of Steven Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steven Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steven Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Tuesday 24th September 2019 between 11:30am – 12:30pm. The weather was raining. The road surface was wet during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. The audit team were not notified of any departures from standards.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

The scheme involves the construction of an access bell mouth into the temporary construction site (Big Field). This serves the bottom third area of the site to be used for predominately for parking / bus pick-up. Other than the junction construction King Georges Avenue highway will be unaffected.

Immediately off the junction with Lovers Lane, Valley Road is to be widened to accept two-way traffic and provide access into the worker accommodation area of the Big Field site. A more formal access into the field opposite the Big Field junction is to be provided. The junction of Valley Road / Lovers Lane is to be re-constructed to accommodate vehicle movements.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

3.1. WALKERS, CYCLISTS AND HORSE RIDERS

3.2. PROBLEM 1

Location: A – Footway/cycleway through the Big Field

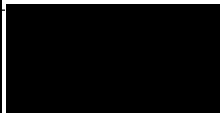

Summary: Footway/cycleway width may cause collisions between users.

There is a proposed footway/cycleway from Valley Road to the north through the Big Field. The facility is 1.5m in width for two-way cycle and pedestrian usage. This narrow width may be insufficient to allow cyclists and pedestrians to pass each other safely, increasing the risk of collision between the users.

RECOMMENDATION:

It is recommended that the footway/cycleway be of sufficient width to allow users to safely pass each other.

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

1. PROJECT DETAILS

Report title:	<i>Sizewell C – Lovers Lane Stage 1 Road Safety Audit</i>
Date:	<i>October 2019</i>
Document reference and revision:	<i>50400326/2019/Ref15</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the *Sizewell C – Lovers Lane* scheme on behalf of Steve Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steve Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steve Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Tuesday 24th September 2019 between 12pm – 1pm. The weather was raining with sunny spells. The road surface was wet during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. Departures from standard are required on the realigned section of road in the vicinity of the site access ghost island junction. Specifically, the horizontal radii on the realigned road is 180m which is 2 steps below the requirement for a 70kph design speed road within Table 3 TD 9/93. This is constrained by the redline boundary and space required for the WMZ 6 Balancing Pond. It is considered that the tighter radii will discourage overtaking / speeding on the bend and therefore improve safety on the approaches to the ghost island junction.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

Lovers Lane highway will be used to provide the primary access to the Sizewell C construction site for Heavy Goods Vehicle (HGV) deliveries. The road also links the construction site access to the temporary worker site (Big Field) situated to the south on Lovers Lane. Access to Lovers Lane will be from the A12 to the north via the B1122. HGV access via Leiston Village being prohibited under normal circumstances.

Lovers Lane has a revised design speed limit of 70kph reverting back to 100kph to the south of the Big Field access junction. The highway improvements on Lovers Lane comprise of the following;

- 1) Re-location of the Lovers Lane junction on the B1122 to the south. The existing junction clashes with the proposed Green Rail Route (GRR). A new section of approach road to the junction is proposed to tie back into Lovers Lane.
- 2) Re-alignment of Lovers Lane in the vicinity of the proposed construction site access and provision of a ghost island junction at the access. The existing road possess adverse bends at this location and clashes with the proposed WMZ 6 balancing pond location. The scope includes the construction site access down to the crossing point of the GRR.
- 3) Provision of a Pegasus Road crossing to the north of the Valley Road cross roads. This is for the Bridleway 19 pedestrian / cyclist / equestrian route which runs along Lovers Lane from King Georges Avenue junction through to the B1122.
- 4) Off slip access to the Recycle Centre to the north of the Valley Road junction.
- 5) Widening of Lovers Lane to accommodate a ghost island and new HGV access into the 'Big Field'.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

3.1. WALKERS, CYCLISTS AND HORSE RIDERS

3.2. PROBLEM 1

Location: A – Bridleway crossing at the Lovers Lane / B1122 junction.

Summary: Risk that the bridleway pen will reduce visibility for road users.

Bridleway 19 is to cross over the B1122 to the south of its junction with Lovers Lane. The bridleway crossing has pens, consisting of post and rail fencing, on either side of the B1122 to provide a safe waiting area for horse riders. Due to the close proximity of the bridleway crossing to the Lovers Lane junction, there is a risk that the pen may restrict visibility for drivers attempting to exit Lovers Lane onto the B1122 resulting in a collision.

RECOMMENDATION:

It is recommended that the bridleway pens be located/constructed so they do not restrict visibility for other road users.

3.3. PROBLEM 2

Location: B – Bridleway crossing at the Lovers Lane / B1122 junction.

Summary: Risk that drivers exiting Lovers Lane will fail to stop for horse riders crossing.

Bridleway 19 is to cross over the B1122 to the south of its junction with Lovers Lane. The bridleway crossing is a Pegasus crossing, requiring road users to stop when faced with a red traffic signal, allowing horse riders to cross. However, due to the close proximity of the crossing to the Lovers Lane junction, there is a risk of drivers exiting Lovers Lane and turning left, failing to identify the crossing resulting in a red-light violation and potentially colliding with horse riders crossing the B1122. Visibility at the junction may be further compromised due to Lovers Lane being within a cutting on the approach to the B1122.

RECOMMENDATION:

It is recommended that drivers on Lovers Lane are made aware of the Pegasus crossing on the B1122 and that it can clearly be seen from the Lovers Lane junction.

3.4. PROBLEM 3

Location D – B1122 Abbey Road

Summary: New residential development access not considered within scheme design

There is a new residential development and associated access on the west side of B1122 Abbey Road, close to the location of the realigned Lovers Lane junction. This is not shown on the design drawings nor was sufficient information available to determine the geometry of the possible staggered cross roads during the site visit. The bridleway will cross the new junction, although how this will be achieved has not been addressed. Without holding pens at the bellmouth crossing there

is risk of collision between equestrians, cyclists and pedestrians, or riders losing control of horses and their entering the road in front of traffic.

RECOMMENDATION:

It is recommended that the bridleway design be amended to include safe crossing of the new development access and new Lovers Lane junction be designed taking into account the new development access to help avoid any safety related issues involving turning vehicles.

SIGNS

3.5. PROBLEM 4

Location: C – Recycle centre on Lovers Lane

Summary: Increased risk of collisions between traffic on Lovers Lane and queuing traffic.

There is an existing Recycle Centre on Lovers Lane (see Photo 1). The Recycle Centre appears to suffer from queuing traffic (due to existing ‘Queues Likely Ahead’ signs and observations on site). With traffic flows likely to increase due to the Sizewell project, there is an increased risk of vehicles travelling along Lovers Lane colliding with the rear of stationary traffic waiting to turn into the Recycle Centre. This issue is compounded due to the Recycle Centre being sited in a location which is not clearly identifiable for northbound traffic and is over the crest of a summit. Any queues are, therefore, unlikely to be seen until a driver passes over the summit. Whilst a ‘left turn in’ taper is proposed to help alleviate the queuing southbound into the Recycle Centre, a right turn island is not proposed for northbound traffic wishing to turn right into the centre. The increased traffic levels are likely to increase the risk of vehicles on Lovers Lane colliding with stationary traffic at the Recycle Centre.

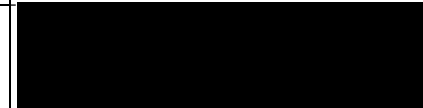

Photo 1 – View south of the Recycle Centre

RECOMMENDATION:

It is recommended that a right turn lane be provided to provide a safe waiting area for vehicles waiting to turn right into the Recycle Centre.

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

Report title:	<i>Sizewell C – Main Site Access Stage 1 Road Safety Audit</i>
Date:	<i>October 2019</i>
Document reference and revision:	<i>50400326/2019/Ref13</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the *Sizewell C – Main Site Access* scheme on behalf of Steven Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steven Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steven Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Tuesday 24th September 2019 between 11am – 12pm. The weather was raining. The road surface was very wet during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. *No departures from standard have been formally submitted to the Highway Authority for approval at this stage. However, a few potential departures from standard have been identified that may or may not be required depending on the outcome of later design stages.*

Western Arm (B1122) forward visibility on approach to proposed roundabout - Tree and vegetation clearance will be required to achieve 120m DMSSD. If these clearance works prove not to be possible a departure from standard would be required.

Southern Arm (B1122) forward visibility on the exit from the roundabout - Tree and vegetation clearance will be required to achieve 120m DMSSD. If these clearance works prove not to be possible a departure from standard would be required. (copied from the Brief).

Northern Arm (East Bridge Road) combination of a relaxation in horizontal curvature (90m radii) and relaxation in superelevation (3.5%). (the above is copied directly from the Brief)

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

This aspect of the scheme includes a new at-grade 4-arm roundabout on the B1122 to provide access to the Sizewell main site.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

3.1. WALKERS, CYCLISTS AND HORSE RIDERS

3.2. PROBLEM 1

Location: A – Proposed bridleway between the north and western arms of the roundabout.

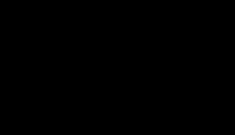

Summary: Risk of walkers, cyclists and horse riders (WC&HRs) falling down embankment at rear of facility.

The proposed bridleway guides WC&HRs between the north and western arms of the new roundabout. The bridleway is 3 metres in width, with an embankment adjacent to its northern edge. The narrow width of the route (considering all users can utilise this facility) combined with the close proximity to the top of the embankment could lead to a WC&HR falling down the embankment resulting in injury.

RECOMMENDATION:

It is recommended that either the Bridleway be widened (potential for widening shown on drawings) or a post and rail fence be provided at the top of the embankment.

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

1. PROJECT DETAILS

Report title:	<i>Sizewell C – Sizewell Link Road Stage 1 Road Safety Audit</i>
Date:	<i>October 2019</i>
Document reference and revision:	<i>50400326/2019/Ref11</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the *Sizewell C – Sizewell Link Road (SLR)* scheme on behalf of Steven Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steven Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steven Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Tuesday 24th September 2019 between 10:30am – 11:30am. The weather was raining. The road surface was very wet during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. *Departures required on the A12/SLR roundabout north and south approaches and B1122/MMLR¹ roundabout west approach. Specifically, the horizontal radii on the approaches of the existing roads (i.e. A12 and B1122) are tighter than the ones indicated in TD9/93 Table 3. This was required to achieve a better deflection within the available red line boundary. (copied from Brief).*

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be

¹ Middleton Moor Link Road

produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

The Sizewell Link Road (SLR) has a design speed of 100kph. It would connect the A12 to a new roundabout, whilst bypassing the existing B1122 and settlements of Middleton Moor and Theberton and re-joins the B1122 to the east of Theberton. A new roundabout will be located on the B1122 (west of Middleton Moor) and a new link road will connect this to the SLR at a T-junction.

Seven additional T-junctions are proposed on the SLR between Middleton Moor Link Road (MMLR) and the east end tie in to the B1122.

Currently, all the T-junctions have been designed as ghost island junctions with provisions for non-motorised users (NMU)s to provide continuity of the public right of way (PROW).

The western section of SLR (i.e. between the A12 roundabout and MMLR junction) has geometry that would allow overtaking, but this has not been an important consideration in the design.

ROAD MARKINGS

3.5. PROBLEM 4

Location: D – Side road junctions at chainages 4100 and 5900

Summary: Increased risk of collisions between vehicles waiting to turn into the side roads and other vehicles on the SLR.

The SLR is constructed with several side road junctions, and many of these have a right turn lane proposed to provide a safe waiting area when turning into the side road. However, the two side roads as detailed above do not appear to have right turn lanes proposed. This is likely to increase the risk of a collision between a vehicle waiting to turn right into the side road and a vehicle continuing straight on the SLR.

RECOMMENDATION:

It is recommended that adequate provision is made on the SLR to allow for safe right turn manoeuvres into the side road junctions.

1. PROJECT DETAILS

Report title:	<i>Sizewell C - Southern Park and Ride Stage 1 Road Safety Audit</i>
Date:	<i>September 2019</i>
Document reference and revision:	<i>50400326/2019/Ref3</i>
Prepared by:	<i>WSP</i>
On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the Sizewell C - *Southern Park and Ride* scheme on behalf of Steve Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steve Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMAPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steve Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Monday 23rd September 2019 between 2pm – 3pm. The weather was fine with sunny spells. The road surface was dry during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. The audit team were not notified of any departures from standards.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

This aspect of the scheme consists of highway improvements to the A12/B1078 junction. These consist of signing and road marking alterations, as well as an additional access from the A12 eastbound slip road into fields to the north of the A12.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

3.1. SIGNING

3.2. PROBLEM 1

Location: A – A12 Northbound immediately after the offslip to the B1078

Summary: Risk of drivers being unaware of the offside lane drop.

As part of these junction improvement works, the offside lane drop on the A12 is to be relocated further to the south, just after the offslip to the B1078. The offside lane will be hatched with three 'tuck-in' arrows to help inform drivers of the need to move from the offside lane into the nearside. However, there doesn't appear to be any advance signage associated with the lane drop. If drivers are not notified of the lane drop in advance this could result in late lane change manoeuvres resulting in loss of control or side swipe collisions.

RECOMMENDATION:

It is recommended that adequate advance signage be provided of the lane drop.

3.3. ROAD MARKINGS

3.4. PROBLEM 2

Location: B – A12 northbound between the offslip and onslip.

Summary: Increased risk of collisions at layby.

The offside lane of the A12 is to be hatched-out from a point to the north of its offslip to the B1116. Immediately to the north of the start of the hatching, there is an existing layby. The layby is to remain following the improvement works. However, with the end of the offside lane of the A12 being so close to the layby, there is a risk of drivers merging into a single lane being unaware of the risk of vehicles either slowing to enter the layby or of vehicles exiting the layby, potentially at low speeds due to the gradients. This may increase the risk of collisions between vehicles on the A12 with vehicles entering or exiting the layby.

RECOMMENDATION:

It is recommended that the layby be closed or relocated.

3.5. ALIGNMENT

3.6. PROBLEM 3

Location: C – A12 northbound onslip.

Summary: Risk of vehicles colliding with power line poles.

The park and ride scheme provides a new footway and crossing over the entry/exit from the proposed park and ride site. However, there is an existing power-line post within the proposed alignment of the footway and it will be very close to the edge of the diverge taper into the park and ride site (see Photo 1). Should these posts be subject to a collision with a passing vehicle, the electricity power line could fall to the ground and come into contact with other road users. The poles may also obstruct pedestrian movement on the footway, forcing pedestrians into the deceleration lane with risk of collision from traffic.

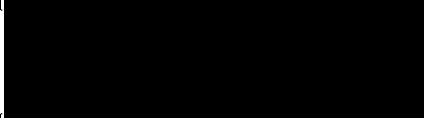

Photo 1 – Power line poles to the rear of the layby

RECOMMENDATION:

It is recommended that power line posts be protected or relocated.

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

On Behalf of:	<i>Suffolk County Council</i>

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the *Sizewell C – Theberton Bypass* scheme on behalf of Steven Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steven Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMAPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steven Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Tuesday 24th September 2019 between 10:30am – 11:30am. The weather was raining. The road surface was very wet during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. The audit team were not notified of any departures from standards.

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

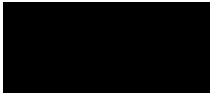

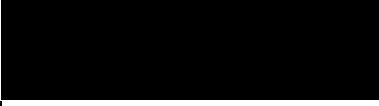

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

The Theberton Bypass is a variant of the Sizewell Link Road where the bypass is to be constructed to the south of the village of Theberton.

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.

2. INTRODUCTION

2.1.1. This report results from a Stage 1 Road Safety Audit (RSA) carried out on the *Sizewell C – Yoxford Roundabout* scheme on behalf of Steven Merry, Audit Project Sponsor. The Road Safety Audit was carried out during September 2019.

2.1.2. The Road Safety Audit Team approved by Steven Merry, Audit Project Sponsor was as follows:

Audit Team Leader: Neil Jones BA(hons), DipTEDM, MSoRSA, MCIHT

Audit Team Member David Minshall IEng, MICE, MCIHT, MSoRSA, IMaPS

Neil Jones holds a Road Safety Certificate of Competence meeting the requirements of the European Directive 2008/96/EC and GG119 paragraph 3.9 and appendix G.

2.1.3. The audit took place in WSP's Birmingham office in September 2019. The Road Safety Audit was undertaken in accordance with the Road Safety Audit brief provided by Steven Merry, Audit Project Sponsor, and accepted by the Audit Team on the 9th September 2019.

2.1.4. The Audit Team visited the site together on Tuesday 24th September 2019 between 9am-10am. The weather was raining. The road surface was wet during the site visit. Traffic was free flowing.

2.1.5. The Road Safety Audit also comprised of an examination of the documents and drawings supplied to the Road Safety Audit Team, referenced in Appendix A of this report.

2.1.6. All comments and recommendations are referenced to the design drawings and the locations have been indicated on the plan located in Appendix B.

2.1.7. The terms of reference of the Road Safety Audit are as described in the Design Manual for Roads and Bridges Standard GG 119 Road Safety Audit.

2.1.8. The Road Safety Audit Team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the designs to any other criteria.

2.1.9. *Departures on A12 West and B1122 approaches were required to achieve a better deflection within the available red line boundary. Existing radii on A12 and B1122 on the junction appear lower than those advised by DMRB TD9/93 Table 3. (copied from Brief)*

2.1.10. Audit administration

This Audit Report has been submitted to the Audit Project Sponsor for consideration. A copy of this RSA report should then be passed onto the design team to allow a RSA response report to be produced. This should be completed within 1 month of the issue of the RSA report and the Audit Project Sponsor should then provide a copy to the RSA team for information.

The Audit Project Sponsor is responsible for identifying any misinterpretations of the scheme proposals or if any problem or recommendation is not accepted.

Safety issues identified during the audit and site inspection which the Terms of Reference exclude from this report, but which the audit team wishes to draw to the attention of the Audit Project Sponsor, will be set out in a separate letter.

2.2. Purpose of the Scheme

The plan is to build and operate a new nuclear power station in Suffolk on land immediately to the north of the Sizewell B power station, adjacent to an area that has had nuclear power stations operating since 1966. As part of these works, a number of highway improvement works and new carriageway construction (including 2 new bypasses) are to be constructed.

This aspect of the scheme consists of the upgrade of the existing T-Junction between the A12 and the B1122 to a Roundabout. Furthermore, the final section of the B1122 is realigned and connected to the new B1122 alignment via a T-Junction to retain access to properties on the south-western side of the Roundabout.

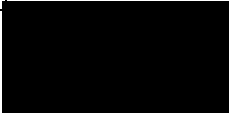

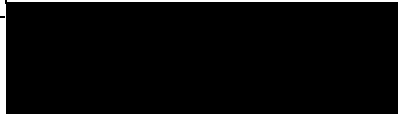

The resulting space located in between the existing B1122 carriageway and the proposed roundabout will be used to accommodate an infiltration pond.

3. PROBLEMS IDENTIFIED AT THIS STAGE 1 ROAD SAFETY AUDIT

There were no road safety issues raised during the Stage 1 Road Safety Audit

4. AUDIT TEAM STATEMENT

We certify that this audit has been carried out in accordance with GG 119.	
ROAD SAFETY AUDIT TEAM LEADER	
Name:	Neil Jones
Signed:	
Position:	ITS Principal Consultant (Road Safety Engineering)
Organisation:	WSP
Date:	02/10/19
ROAD SAFETY AUDIT TEAM MEMBER(s)	
Name:	Dave Minshall
Signed:	
Position:	Principal Engineer (Road Safety Engineering)
Organisation:	WSP
Date:	02/10/19
