

I would like to start by saying that I endorse the written representations of Stop Sizewell C, TASC, RSPB/SWT, Suffolk Coastal Friends of the Earth and others.

The proposal to build Sizewell C in an Area of Outstanding Natural Beauty needs to be stopped in its tracks. This precious area of land is too small to cope with the massive construction site that is being proposed, the infrastructure cannot cope with the additional heavy traffic, there are very few new long term jobs that will be brought into the area and it puts at risk the very existence of Minsmere, a world renowned site. Sizewell C will never be "carbon neutral" if a proper measurement of this idea is considered. It is old and expensive technology that has no place in our energy mix. The construction will be so expensive that consumers will have to pay a hefty premium to support it. Why should we pay to see our countryside destroyed, our roads clogged with traffic and our beautiful local walks and visits to Minsmere ruined? Please throw out this dreadful plan.
