Dear Sir/Madam,

The building of a Sizewell Nuclear Power plant is so obviously going to have a completely catastrophic effect on the surrounding area, its people, nature and the entire ecosystem, particularly marine life.

I urge you not to allow this disaster to take place, not just for the harm it will do to people of this current generation but the terrible legacy it will leave for future generations and the planet as a whole.

This is a time for our planet when we urgently need to clean up our act, in order to prevent further pollution and ecological disasters and not add to the already apparent devastation of our natural world and ultimately risk the extinction of our human species too.

Yours sincerely,
Naraya Gabriel (Ms.)
