Dear Sizewell C planning inspectorate,

I am deeply concerned about the possibility of the go ahead for Sizewell C. As a local resident I fear the extreme damage it will bring to this extraordinary area. I can't see the sense of building something so great on an eroding coastline. (Look what happened to Dunwich?)
What of the 3,900 pile of radioactive waste?? Are we just leaving that for someone else to clear up after it has damaged and sickened everything around it...
IN proceeding we can surely say goodbye to the peace of Minsmere and the safe haven it offers wildlife. Hence the disappearance of much of the precious bird life.
How can Tourism possibly survive the build? Rush hour traffic will become difficult - we don't have the roads. From the information I have read it looks like we're going to create a concrete hell.
Some locals believe that employment figures will go up for the community but again from what I have read most workers will come in from other parts of the country added to which locals who work in the tourist industry as I do will likely lose our incomes.

I cannot see any good reason to create electricity in this manner when we could be focusing more energy and commitment to developing and implementing renewables. A fully sustainable way forward.

PLEASE PLEASE PLEASE DO NOT destroy this beautiful and unique area!
There have to be other solutions.....

As a tax payer and someone that will be paying for this through raised electricity tariffs I fully and wholeheartedly OBJECT to the constriction of Sizewell C.

Yours in hope,

Jessica Palin
