ESIDB Comments on any additional information/submissions received by D2

Sizewell Link Road Flood Risk Addendum (REP2-026)

The document is based on the effectiveness and feasibility of the infiltration led Sizewell Link Road surface water drainage strategy, on which the ESIDB still await further detail.

If the assumptions made in the drainage strategy are eventually supported and the infiltration led approach is feasible the ESIDB will defer to the LLFA and the Environment Agency on the acceptability of the Flood Risk Addendum as the development itself and most currently foreseeable impacts are concentrated outside of the Internal Drainage District.

Sizewell C Associated Development Design Principles, Revision 2.0 (REP2-041)

The ESIDB await further details on the feasibility of the drainage designs referenced in this document before commenting.

Sizewell C Updated Code of Construction Practice, Revision 3.0 (REP2-056)

No comment.

Sizewell C Outline Drainage Strategy, Revision 2.0 (REP2-033)

It is not practicable to identify the changes in this revision as only a clean version was submitted. In general, the ESIDB await further details to evidence the feasibility of the drainage designs referenced in this document before commenting.
