Deadline 5 submission IP NO 20026173

Date:

24 July 2021 00:03:05

Dear Sizewell C Team

It is with much regret that I am unable to respond to deadline 5 in any great detail. Personally I feel it has been made impossible for IP's to engage in this stage of the process in any meaningful manner due to the back to back issue specific hearings and only a week to make comments.

So briefly here are my observations from listening to all 1 to 7 ISH's

The Applicant still has no funds for the Sizewell C project yet the ExA is expected to consider whether the Applicant's plans of mitigation and compensation are adequate. What effectively is up for consideration here is if the UK Govt is willing to subsidise 83% French Govt owned EDF with UK tax/bill payers funds to build a still unproven EPR reactor design at Sizewell. The Applicant is also proposing to use this funding to cause further environmental damage with new roads and rail, claiming that this in someways compensates for the environmental damage the SZC project will cause.

The Applicant still has no acceptable transport strategy.

The Applicant still has no proof it can protect the site from climate change extreme weather events.

The Applicant still has no proof that in its attempts to protect its own site it will not cause damage to its neighbours.

The Applicant has no way of protecting the flora and fauna that have chosen to make East Suffolk their home.

Yours sincerely

Jennifer Wilson
