Objection to Sizewell C

I wish to highlight how this power station will become a 'white elephant' incurring an enormous waste of public money.

The arguments for nuclear power are based on the need to provide electricity at times when the renewable sources stop generating due to lack of sun, wind and other green technologies. This argument falls down as soon as a viable means of storing electricity becomes available. Already Hydrogen Cells are on the near horizon. If the funding for development of this and other technologies was increased substantially but by a fraction of the cost of Sizewell C a viable technology will exist by the time Sizewell C is forecast to start producing electricity. Every generator from home solar projects to larger commercial projects will be able to store electricity for their use or sale of the stored electricity.

The many arguments for objection put forward by the Stop Sizewell C group are also valid. As a visitor to this beautiful stretch of coastline I am particularly concerned that it will be ruined as indeed will the tourist industry.

Please stop government wasting money on a redundant project and one that has substantial disadvantages. Disadvantages.

Robyn Thorogood, a Buckingham resident.
