Subject: **Opposition to proposals for the Construction of Sizewell C nuclear power station**

I am writing to express my opposition to the planning application for the construction of Sizewell C Nuclear Power Station . There are a number of serious concerns

Firstly - environmentally

Our coast line is disappearing rapidly and is totally unsafe to have nuclear rods in the earth .

No safe way has been developed in decades for safe disposal of nuclear material

It is colossal and will have devastating effects on the environment and nature

Secondly - not green

The future as demonstrated to date is in renewables and green technology .

Money and energy needs to be put into green technology and storage . By the time Sizewell C is built new technologies will be in place that negate any need for such an inappropriate source of energy

The carbon cost of construction is enormous .

Concrete is not green and is not carbon neutral

Thirdly - nationally and globally

It gives licence for other countries to expand nuclear - and how can this be safe.

There is a dependence on other countries which is unacceptable with such developments

I therefore object wholehearted.

Yours sincerely

Elaine Heeler
