Dear fellow human beings

Please please just say No to Sizewell C.

You will have heard the evidence and must realise that this would be an environmental disaster, not just locally but globally. There is no solution to nuclear waste and now questions over water supplies! Let's go forward with alternative green energy, creating green jobs, providing hope for future generations, not leave them with an expensive nuclear legacy with negative consequences on us and our environment.

Please make the right choice for not only us humans, but all wildlife sharing our planet.

Jennie Greenhalgh
