---

I wish to implore the planning inspectorate not to give permission to the Sizewell C project.

I have concern about the lack of long term water supply for the build which has not been resolved.

The construction will destroy large parts of the surrounding countryside and totally impact on the RSPB Nature Reserve as I, for one of many, will not want to visit in future if this goes ahead. Many wildlife species will be forced to go elsewhere even if they survive the time involved in the building of this monstrosity.

Coastal defences planned by EDF (the French company) will not stand up during the inevitable sea level rise. There will be a huge impact on local tourism and businesses. The plant will be obsolete before it is completed which will not be in my lifetime. No plant of this type has been commissioned so is unproved.

What to do with the nuclear waste will be of great concern as it is already with present nuclear plants. Clean energy it is not but Solar is!

It is altogether madness to give permission for Sizewell C.

Kay Lobar
