Subject: My objection to Sizewell C
Date: 10 October 2021 16:19:29

Hello,

I am a Suffolk Coastal resident and also a scientist.

My objection to Sizewell C, beyond local issues such as environmental destruction, is that nuclear energy, at least of the fission variety, is not "clean energy".

The Chernobyl disaster was, in some quarters, blamed on Soviet technology - then came Fukushima, a Japanese/US design, with appalling design faults, some obvious even to non-nuclear engineers (e.g. siting the back-up cooling generators below the reactors, so that the emergency system was wrecked by the Tsunami).

The EDF design is fraught with problems - look at the delays in France and Finland.

The sun provides about 10,000 times more energy, incident on this planet, than we use. We have the conversion technology. We need to concentrate on the storage technology.

No new nuclear please.

Yours Sincerely,

Greg Walsh.
