---

Dear Sir,

I wish to reiterate my objection to the above particularly on the following grounds:-

1. The traffic volumes during construction and in particular before construction of the relief road will, on the basis of edf's projections overwhelm the local road network.
2. The 12 years it will take to build will decimate the local tourism business.
3. The employment of local skilled workers will mean there are none left to do jobs for local people.
4. The technology of the proposed reactor is untried and untested.
5. No proper funding arrangements have yet been finalised.
6. No viable water supply is available.
7. The local AONB and SSSIS will be adversely affected.
8. The technology is just as likely to be out of date within the proposed construction period.
9. Developments in storage technology have a good chance of developing to a point where capture from the numerous offshore wind farms could make C redundant.

Yours faithfully,

Peter Allsop
