To whom it may concern (all of us)!

I am writing to add my voice to the cry!..... Please please please please please please please STOP all plans to build Sizewell C!

I do understand that for a brief while it looked like increasing nuclear energy might be the way to reduce carbon emissions more quickly and effectively however, when you consider the length of time it will take before Sizewell C would be up and running I would hope that we would be well passed that point.

Apart from whether we agree or disagree on nuclear energy being part of the strategy to reduce carbon emissions this is absolutely the wrong place to be developing it for the following reasons:

- 1) the degree of devastation to the surrounding SSI which obtained this classification for very important reasons;
- 2) the length of time it would take for the wildlife to anything like be restored;
- 3) the lack of evidence provided to show how the surrounding wildlife will be protected;
- 4) the destructive impact on local people's livelihood relating to rural and tourist activities and hospitality;
- 5) the destruction of a way of life to inhabitants of all the local villages including devaluation of their homes for many years to come if not for ever;
- 6) the bad track record for the type of reactor that EDF are planning on building;
- 7) the lack of sensible solution for providing fresh drinking water;
- 8) the rising sea levels;
- 9) the amount of carbon involved in building Sizewell C meaning that there won't be a net saving until well after the 2035 government target for carbon emissions;

Please listen to the voices of people who live here AND care deeply about the environment.

Kind regards
Arabella Marshall
