Another nuclear power station alongside what is already there will damage the coastline irrevocably, terms of its beauty, it is after all identified as an AONB, and the fact that this is an unstable coast which is going to require a very ugly wall to be built to keep the sea back. Why place this power station in such a place? In fact why have a power station at all when the costs of wind and solar are coming down all the time?

I do not live in the immediately affected area but I do feel for those people who do. This is devastating for them, many of whom have lived there in peace and tranquility for years.

I urge you to seriously reconsider. Good jobs for local people could be provided if wind and solar were expanded, as could jobs elsewhere for those many hundreds of workers who will be bussed in to work on the site, which Boris Johnson says he doesn't think should happen!!

Please see sense and stop this catastrophe.
