Decarbonising the power system by 2035 is critically important but massive nuclear projects like Sizewell C have no place in this strategy. Besides not being green (disposal of radiation over thousands of years and using up uranium), Sizewell C would be too slow, risky and expensive; it may not even work and is likely to be obsolete by the time it was completed. Building the plant will also be destructive of a unique local environment. A truly green home-grown strategy would focus on renewables, energy storage, clean heat and energy.
