Dear Planning Inspectorates,

I have lived in this AONB of Suffolk for over 5 years with my family and children. I have created 2 forest schools at Orford and Snape primary schools and I can vouch for the communities that I have been working hard to grow & support that no-one is supporting this ludicrous and worrying plan ... Please put a stop to it now! The trouble is that it's very hard for local lay people to even begin to know what to do in terms of putting a stop to this, fighting against such a huge and powerful rich company and even just having enough time among the daily grind of living hand to mouth for most of the community, plus having family on top to care for, means that most people find it impossible to make a stand or even begin how to know what to do ... I know you have petitions, please factor in these numbers, but please understand that most locals are against these proposals and in despair, yet for various reasons won't have joined in with any of the campaigning.

We worry for our children and communities at the proposal of shipping in thousands of temporary workers ... it will surely be a boom and bust scenario again leaving a ghost town behind again. It will be unsafe for our children - not just with the impact of thousands of temporary (likely mostly single male?) workers, but also the traffic, fumes and hazardous impact of road safety are a huge worry. The HGV traffic and disruption will be immense and unsafe. The whole project will have a huge impact on local business - especially the holiday people who form the backbone of our local economy. Why will holiday makers want to pay to visit an area where a huge nuclear power station is being built!?! We will lose the main earner of our local economy - tourism and one of the main draws to the area - ecology and nature. It's hard enough for our locals building a community with having mainly visitors and holiday home owners to the area, but now you want to kill that too!?! Please put a stop to it now.

A huge huge criminal act would be to let this work go ahead due to the loss of rare habitat and biodiversity ... here in this part of Suffolk we have some of the most precious and rare habitats and species - all of which are on the brink of extinction, there is such little left and we are in the midst of an environmental crisis - it's almost too late! Yet you can make a difference and change this around and act now by putting a stop to biodiversity loss. If you give the go-ahead it will be contrary to the governments 25 year environmental plan also. I cannot therefore understand why on earth you would put these special PROTECTED areas at risk!?! It would be nothing less than a crime of ecocide!!! Official biodiversity ecology evidence backs up what I'm saying, I'm sure you've been presented with much of it during the hearing, but have you fully understood the impact and taken on the figures enough to understand how crucial these tiny areas we have left here are!? There is such little left of these nature reserves, rich in biodiversity, why on earth pick here where there are multiple environmental protection orders in place!? If you really have to have nuclear power then why do it here of all places in the country with all the SSI and environmental protection orders in place!? It just makes me lose what little hope I have left for our children and their children's children. But YOU can make a difference by not allowing these monstrosity works to go ahead and stop putting their future and the future of our local biodiversity at risk!

I also can't think why on earth are you considering placing a nuclear power station on the most quickly eroding coast line in the country!? Have you been to the beach and put your

toes on the sand & pebbles?! Then visited the next day to witness how the shore has completely changed overnight!? I'm aware of your proposals to deal with this but it totally insufficient! Why on earth you would consider allowing the most dangerous nuclear power plant to be built on the most unstable ground and crag base? It's just ridiculous to even have been considering it this far! Even my 5 year old could work out with a simple experiment that it'd be an unwise choice! Let alone the environmental and community devastation to the area you will bring ... please be wise and stop this now, I absolutely plead you.

All this is without even having mentioned the lack of a secured long term water supply, immense concerns about the impacts of a water desalination plant during construction and uncertainly about coastal defences amid warnings of rising sea levels.

Please put a stop to this now. We have too little left, the dangers are too high and the impact too severe.

Many thanks,
Your sincerely,
Kinna Mosley and all my family and friends.

Kinna Mosley
