To whom it may concern,

In relation to your allowing this project to go forward there are a couple of things I feel it is important for this body to understand.

The basis for making your decision, based on information from local non governmental bodies, vested interests and 'chosen' businesses is not verifiable or true.

The local economy has not been presented accurately to you and the benefits to all sectors within a 20 km radius of the site are nil. The detriments are huge.

The tourism and food industry, that has been fighting to ascend for years, is finally being appreciated for the quality and diversity and revenue it represents. Local jobs for local people.

The current design destroys access to many of these businesses. Infrastructure in the surrounding area will simply not support tourism, farming and any extra weight of traffic. The scale of this design in this location is simply impossible.

I would ask that EDF be told to redesign what they want to build to reflect the latest innovations in Reactor design since a smaller reactor will have less impact on the local area, it would be deliverable from the seas.

The current design is archaic and for a failed system to be built in this country is simply criminal.

You should probe the vested interests in local organisations that promote this plan. If you don't, the media and future reviews will.

What will your legacy be?

In the end Nuclear is not carbon neutral, the desalination plant will be run off diesel generators. Not one iota of this plan really adds to any green agenda.

What will your legacy to your children be?

Many Thanks,
Kate Colchester
