Subject: Final call for responses in relation to Secretary of State's letters
Date: 23 May 2022 23:00:07

from the Alde and Ore Association IP ref 20026276

This is to submit that there has been nothing in any of the papers following up the Secretary of State's letters post the Examination to provide answers to the Alde and Ore Association's response at Deadline 7 REP 7- 167 which was essentially the failure of documents to date to deal adequately with the provision to monitor impacts along the Suffolk Coast of this project that would be in place for 150 years or more, nor to deal with the impacts.

Extract "SIZEWELL C PROJECT The National Planning Inspectorate Examination
Written Submission for Deadline 7 providing commentary on EXQ2 CG.2.6 in particular on Coastal Geomorphology Response from the Alde and Ore Association (Registered Charity number 1154583)
IP REF:20026276

Summary The revisions to the CPMMP have addressed only matters within the 3km vicinity of SZC. There is nothing to deal with the impact of the project on the longshore drift or other coastal changes which may impact on the adjacent Suffolk coastline despite the proven geomorphological history and ongoing sedimentation processes. Having a baseline relating to all potentially affected areas, notably in relation to longshore drift, and climate change factors impacting in the coast for the very minimum of the physical life of the construction, is necessary. The legal and funding framework is not clearly set out or obvious.

Thank you

Alison Andrews
