---

We hear,by submit the following letter for your approval.

As from day one we have had concerns over this development. They claimed that there would be no pollution or noise from this plant and could not confirm the height of the stack. Also offering cheaper electricity for the industrial estate, as the National Grid sets the tariffs this is a false statement. It would seem this was there PR approach to gain public votes.

Their initial proposal was to accommodate a larger site, requiring pylons and a carbon capture facility. The new request is for a smaller plant operating on an off peak supply to the National Grid, how can this be cost affective?

This proposal is being requested by a real estate company gaining planning approvals on development land, to sell off to national energy companies, having No respect or regard for the environmental impact on a Rural community.

The consensus of all our village is NO to this approval. Isycoed is an agricultural area and has a School near to proximity of proposed site. This matter causes great concern for the health of our children & future generations & of the village. Why is it necessary to encroach on land so close to a village, when there must be areas available which would be more suitable.

Further more we would ask you to favour a site meeting before you make a decision on this application.

Regards  
John Smith & Susan Davies
