

Dear Examiner

My registration identification 10032192

I'm now putting my case forward regarding the next stage in the consent of the power station.

The noise from the industrial estate is now at a level where local residents of Isycoed have and still do complain to the NRW. I myself have complained numerous occasions during the last two years. It has been reported by residents that the noise at its current levels and previous levels is a statutory nuisance and as an effect of this noise we are unable to enjoy our property from inside our homes and also in our gardens. (please consult the with the NRW regarding ongoing issues).

It has been documented and reported to the NRW that the noise levels we experience affects our ability to sleep in our own homes and as a result of lack of sleep it then has an affect on our ability to function in our every day life's and at work. If the current noise issue is not dealt with this will start and effect our health.

The proposed power station will inevitably add to the already ongoing statutory nuisance noise issues that we already have in the area. I would like to know how the NRW are going to regulate this and monitor this.

Has there been a DB study done by the applicant and if there has been when was this study done and also what times of the day were they monitored at? I would also like you to ask from which parts of the village was the monitoring conducted from as the noise can vary depending on location. The proximity and noise levels can be greatly affected by other properties, barns , hedgerow and barn buildings.

Is the applicant going to complete further surveys regarding noise levels?

I believe that the noise surveys should be an ongoing process as the noise levels change depending on production of existing factory units. If the surveys were completed as part of the original planing application I would ask that the surveys should be completed again so that up to date data can be collated.

As a result of ongoing noise issues and the fact that the proposed power station will add to the already intolerable noise that serious consideration should be given to not granting planning permission to the power station on the industrial estate but consider building it on the Maelor gas works away from residential properties and a primary school. This area has no other noise polluting industry so the noise would be from the station only and therefore be at a acceptable level and not combined with other processes.

If permission was granted for the power station and it was situated at Maelor there would be no confusion in identifying the source of the noise if they were not complying with any permits that regulate their noise levels. I believe if they were to build on the Wrexham industrial estate there would be a element of " no the noise isn't us" and blaming other industries would start then us as residents would be left with a greater none sleeping / health issue.

I would like to attend all further meetings and site visits.

Regards
Kath Briggs
