Hello Rick,

Thank you very much for your email and attachments which I have now discussed with the project team in BEIS that has been set up for this application.

In a previous discussion we had with you regarding the non-material change, I understood that there would be no changes to the parameters of the site and that the increase in capacity will be through the installation of more efficient wind turbines. This wasn't clear from your Reg 7 letter so I'd be grateful if you would confirm that this is correct. I also believe you said that the type of wind turbine you are now looking to install would be of the same height, the same rotor diameter, use the same piling methods and same foundations etc., as the consented turbines and that these are offshore works which is why you felt that the you did not need to consult any land based interested parties. However, we do need you to provide a bit more detail as to why you think you do not need to consult any parties that have an interest in the marine environment.

Finally, would you be able to confirm whether there would be any impact from the increased generation of electricity on the national grid?

Kind regards,
Naomi

Subject: East Anglia THREE Non-Material Change Regulation 7(3) Request for Consent to Consultation Proposals

Dear Naomi

Further to our conversation on Tuesday please find attached a letter with appendices identifying a proposed non-material change for East Anglia THREE Offshore Windfarm.

The letter requests consent for the proposed consultation activity for the non-material change.

Regards

Rick Campbell
