Hepke

Thank you for your email.

In the event that we use gravity base foundations, we will limit these to a maximum 100. The spacing of the wind turbines is limited by the EA3 DCO to minimum 900m x 675m however the final design will be subject to procurement of turbines following the Contract for Difference tender process, due later this year.

In relation to the flexibility in delivery, this won't change the practical elements of the project at all; the change is to the deeded marine licences and means that, in the event we construct the project in a single phase, we will only have to use one single marine license (one each for transmission and generation) rather than two for each – it is purely about reducing paperwork.

I hope that is clear but please don't hesitate to ask if you wish to discuss further.

Thanks
Rick

Dear mr. Rick Campbell,

Thank you for your mail. My name is Hepke and I will be responsible for VisNed for the communication about the wind farms.

If I understand your mail correctly, there will not be made any material changes, except the fact that there will be a limitation of the gravity base foundations from 172 to 100. Does this mean that a bigger area remains open? We would appreciate it, when the spacing between the wind mills is greater, because that gives the fishing vessels the ability to operate within the operational wind farms.

The new proposal states that there will be '*more flexibility in delivery of the phases*'. Could this mean that it is forbidden to fish in the areas during the building period for a longer time?

Looking forward to your reaction.

Kind regards,

H. (Hepke) Deelstra

Onderwerp: RE: East Anglia THREE Non Material Change

Dear Pim and David

Can I ask that you confirm receipt of these documents? We require confirmation by email to ensure our consultation is compliant.

If you have any questions on the Non-Material Change please don't hesitate to ask me.

Kind regards

Rick Campbell

Subject: East Anglia THREE Non Material Change

Dear Sir / Madam

I would be grateful if you would acknowledge safe receipt of this email and its enclosures.

East Anglia THREE Limited (EA3) has submitted an application to the Department for Business, Energy and Industrial Strategy (BEIS) seeking a non-material change to the East Anglia THREE Offshore Wind Farm

EA3 is seeking an amendment to the following:

- To the maximum generating capacity from 1,200MW to 1,400MW
- Confirmation of no upper limit to WTG capacity or, where this is not acceptable, an upper limit of 19MW.

The parameters associated with the largest capacity WTG (and associated foundations) will not be exceeded under any development scenario and no amendments are sought in respect of these parameters.

In addition, EA3 will seek to limit the maximum number of gravity base foundations used by the project from 172 to 100. This change ensures no assessed impacts are exceeded by the proposed change, and are described fully in the Non-Material Change supporting information.

The Application also seeks to allow more flexibility in delivery of the phases, albeit that the approach of up to two phases will not change.

EA3 do not propose to increase generation of electricity to the national grid; the purpose of the change is to take account of electrical losses to deliver 1,200MW to the national grid, thereby improving the commercial viability of the project.

Following a review of proposed consultees BEIS have requested that you are consulted about the non-material change to the East Anglia THREE project.

If you have any queries or wish to clarify anything on the above points or attached documents I would welcome the opportunity to discuss this further.

Kind regards

Rick Campbell
