Emma,

The Contaminated Land Section currently have historical maps for the study area. As you have mentioned in your email, the historical maps show the study area was part of the greater steel works and is therefore potentially contaminated. Unfortunately we do not hold any further information.

However, recently work has been completed on the new Harbour Way Peripheral Distributor Road (PDR) which runs close to the study area. As part of the development control process extensive ground investigations work was conducted. This information may be publicly available online via the Councils Planning Portal website.

I hope you found this information helpful. There will be no charge for this response. You are advised that this information held by the Council, is a working record held in connection with the Council's duties in relation to Part IIA of the Environmental Protection Act 1990 and is subject to change as further information becomes available and is therefore not necessarily fully comprehensive.

Regards

Muttakir Mohammed

Subject: Environmental Data Search

AECOM are conducting a Phase 1 Desk Study investigation for the proposed internal power generation enhancement for Port Talbot Steelworks (see attached plan). AECOM understands that this was part of a larger steelworks site and we would be interested in any information you may have on the site with respect to land contamination?

Site Address: Tata Steel, Abbey Works, Margam, Port Talbot, West Glamorgan, SA13 2NG

It is understood from our recent telephone conversation that there is a £40 fee for this, can you please provide details of the preferred method of payment.

Kind Regards

Emma Ibbotson
