I would like to object to the lack of transparency shown by National Grid in their answers to the written questions of the EA. Also that they have stated that they will not attend Issue Specific Hearings 1 and 2. I similarly object that they and Scottish Power refuse to reveal any details about the planned expansion of the Friston site involving further energy projects. It is obvious that these two planning applications would be setting a precedent for many more to come. Our countryside should not be industrialised in the name of green energy - this is counterproductive to fighting climate change and will lead to the destruction of our planet. Renewable energy is essential but not done in this damaging way.
