Subject: Dr Thérèse Coffey Recommendation for Split Decision.

Dear Planning Inspectorate.

Ref 20034756 & 20034757

I would like to respond to [Action Point 2. The Planning Balance from Open Floor Hearing 6](#)

I call upon the Examining Authorities to recommend to the Secretary of State a 'split decision' so

1. The offshore turbines are recommended for consent. (We are fully supportive of renewable energy and have no objections to the offshore elements of these DCO applications with the proviso all installations are acceptable to stakeholder concerns over the statutory purposes of the AONB affected by these proposals).

2. The onshore infrastructure is rejected in favour of full consideration of better locations and updated technologies for this infrastructure where the adverse impacts are minimised at a brownfield site.

As an Interested Party, I have participated throughout the course of the Hearings and I think one thing has become clear, the adverse impacts of this particular onshore site location substantially outweigh the benefits of the application when taken as a whole. The impact on our environment and the local communities and economy would be

devastating but importantly needlessly devastating. There are alternative sites available which could avoid this destruction by their virtue of being at a brownfield site.

These Applications have come at an unprecedented time of consensus around the importance of offshore wind in reducing the UK's carbon emissions and meeting the government's 2030 offshore wind targets. They have also come at an unprecedented time of consensus around the acutely detrimental impacts of radial connections which these Applications propose. There are still 9 years to go until the Government's 2030 offshore wind targets. There is time for ScottishPower Renewables, National Grid and the Department for Business Energy and Industrial Strategy (BEIS) to get this planning Application right **without** jeopardising these important targets.

A 'split decision' would mean that no time is wasted with respect to the construction of the offshore turbines but would give the opportunity to rethink the onshore aspects of this project to fall in line with current government aspirations and new technologies.

We will safeguard our cherished landscapes, restore habitats for wildlife in order to combat biodiversity loss and adapt to climate change, all whilst creating green jobs."

"To minimise the impact on local communities, we will implement a more efficient approach to connecting offshore generation to the mainland grid."

The Energy White Paper

Kind regards

Piers Sturridge
