PD	Procedural Decision

Glossary of Terminology

Applicants	East Anglia TWO Limited / East Anglia ONE North Limited
East Anglia ONE North project	The proposed project consisting of up to 67 wind turbines, up to four offshore electrical platforms, up to one construction, operation and maintenance platform, inter-array cables, platform link cables, up to one operational meteorological mast, up to two offshore export cables, fibre optic cables, landfall infrastructure, onshore cables and ducts, onshore substation, and National Grid infrastructure.
East Anglia TWO project	The proposed project consisting of up to 75 wind turbines, up to four offshore electrical platforms, up to one construction, operation and maintenance platform, inter-array cables, platform link cables, up to one operational meteorological mast, up to two offshore export cables, fibre optic cables, landfall infrastructure, onshore cables and ducts, onshore substation, and National Grid infrastructure.
Landfall	The area (from Mean Low Water Springs) where the offshore export cables would make contact with land, and connect to the onshore cables.
Onshore cable corridor	The corridor within which the onshore cable route will be located.
Onshore cable route	This is the construction swathe within the onshore cable corridor which would contain onshore cables as well as temporary ground required for construction which includes cable trenches, haul road and spoil storage areas.
Onshore cables	The cables which would bring electricity from landfall to the onshore substation. The onshore cable is comprised of up to six power cables (which may be laid directly within a trench, or laid in cable ducts or protective covers), up to two fibre optic cables and up to two distributed temperature sensing cables.

1 Project Update Note

1.1 Introduction

1. This project update note has been prepared by East Anglia TWO Limited and East Anglia ONE North Limited (the Applicants) to provide details of key project updates for the East Anglia TWO project and East Anglia ONE North project (the Projects) and their Development Consent Order (DCO) applications (the Applications).
2. This project update note supplements the **Project Update Note** (REP2-007) submitted at Deadline 2, the **Deadline 3 Project Update Note** (REP3-052), the **Deadline 4 Project Update Note** (REP4-026) and **Deadline 7 Project Update Note** (REP7-042).
3. This document is applicable to both the East Anglia ONE North and East Anglia TWO applications, and therefore is endorsed with the yellow and blue icon used to identify materially identical documentation in accordance with the Examining Authority's procedural decisions on document management of 23rd December 2019 (PD-004). Whilst for completeness of the record this document has been submitted to both Examinations, if it is read for one project submission there is no need to read it again for the other project.

1.2 Reduction of Order Limits at Work No. 9

4. As noted within the **Scheme Implementation Report** (APP-596) the Applications included flexibility which allowed for a wider onshore cable route (and corresponding wider Order limits) within the southern extent of Work No. 9. This flexibility was required in the event that transition bays are located to the north of Work No. 8 (landfall) and are spatially separate and allowed a 'funnel effect' which allowed the onshore cable route to transition from a width of 190m where the cables are within 418m of a transition bay forming part of Work No. 8 to a width of 32m (as shown on **Figure 3** of the **Scheme Implementation Report** (APP-596)).
5. A reduction in the Order limits within the southern extent of Work No. 9, as shown in Figure 1 of **Appendix 1**, has been achieved by the removal of land plot 10 (**Land Plans** (document reference 2.2)) in its entirety from the Order limits, and minor reductions in land plot 12 and 13.
6. Consideration of this reduction was prompted by various representations made by Dr Gimson on behalf of the Wardens Trust, seeking increased separation between the Order limits and the Wardens Trust property which this change achieves; and requests by Mr Richard Reeves and Ms Tessa Wojtczak during

informal consultation relating to the previous realignment of Work No. 9 (as narrated in **Change Request: Amendment to Order Limits at Work No. 9 (Plot 13)** (AS-104)) to remove Plot 10. Through engagement with designers and progression of the landfall outline design, the reduction in Work No. 9 will not compromise the necessary flexibility at the landfall or the deliverability of the landfall.

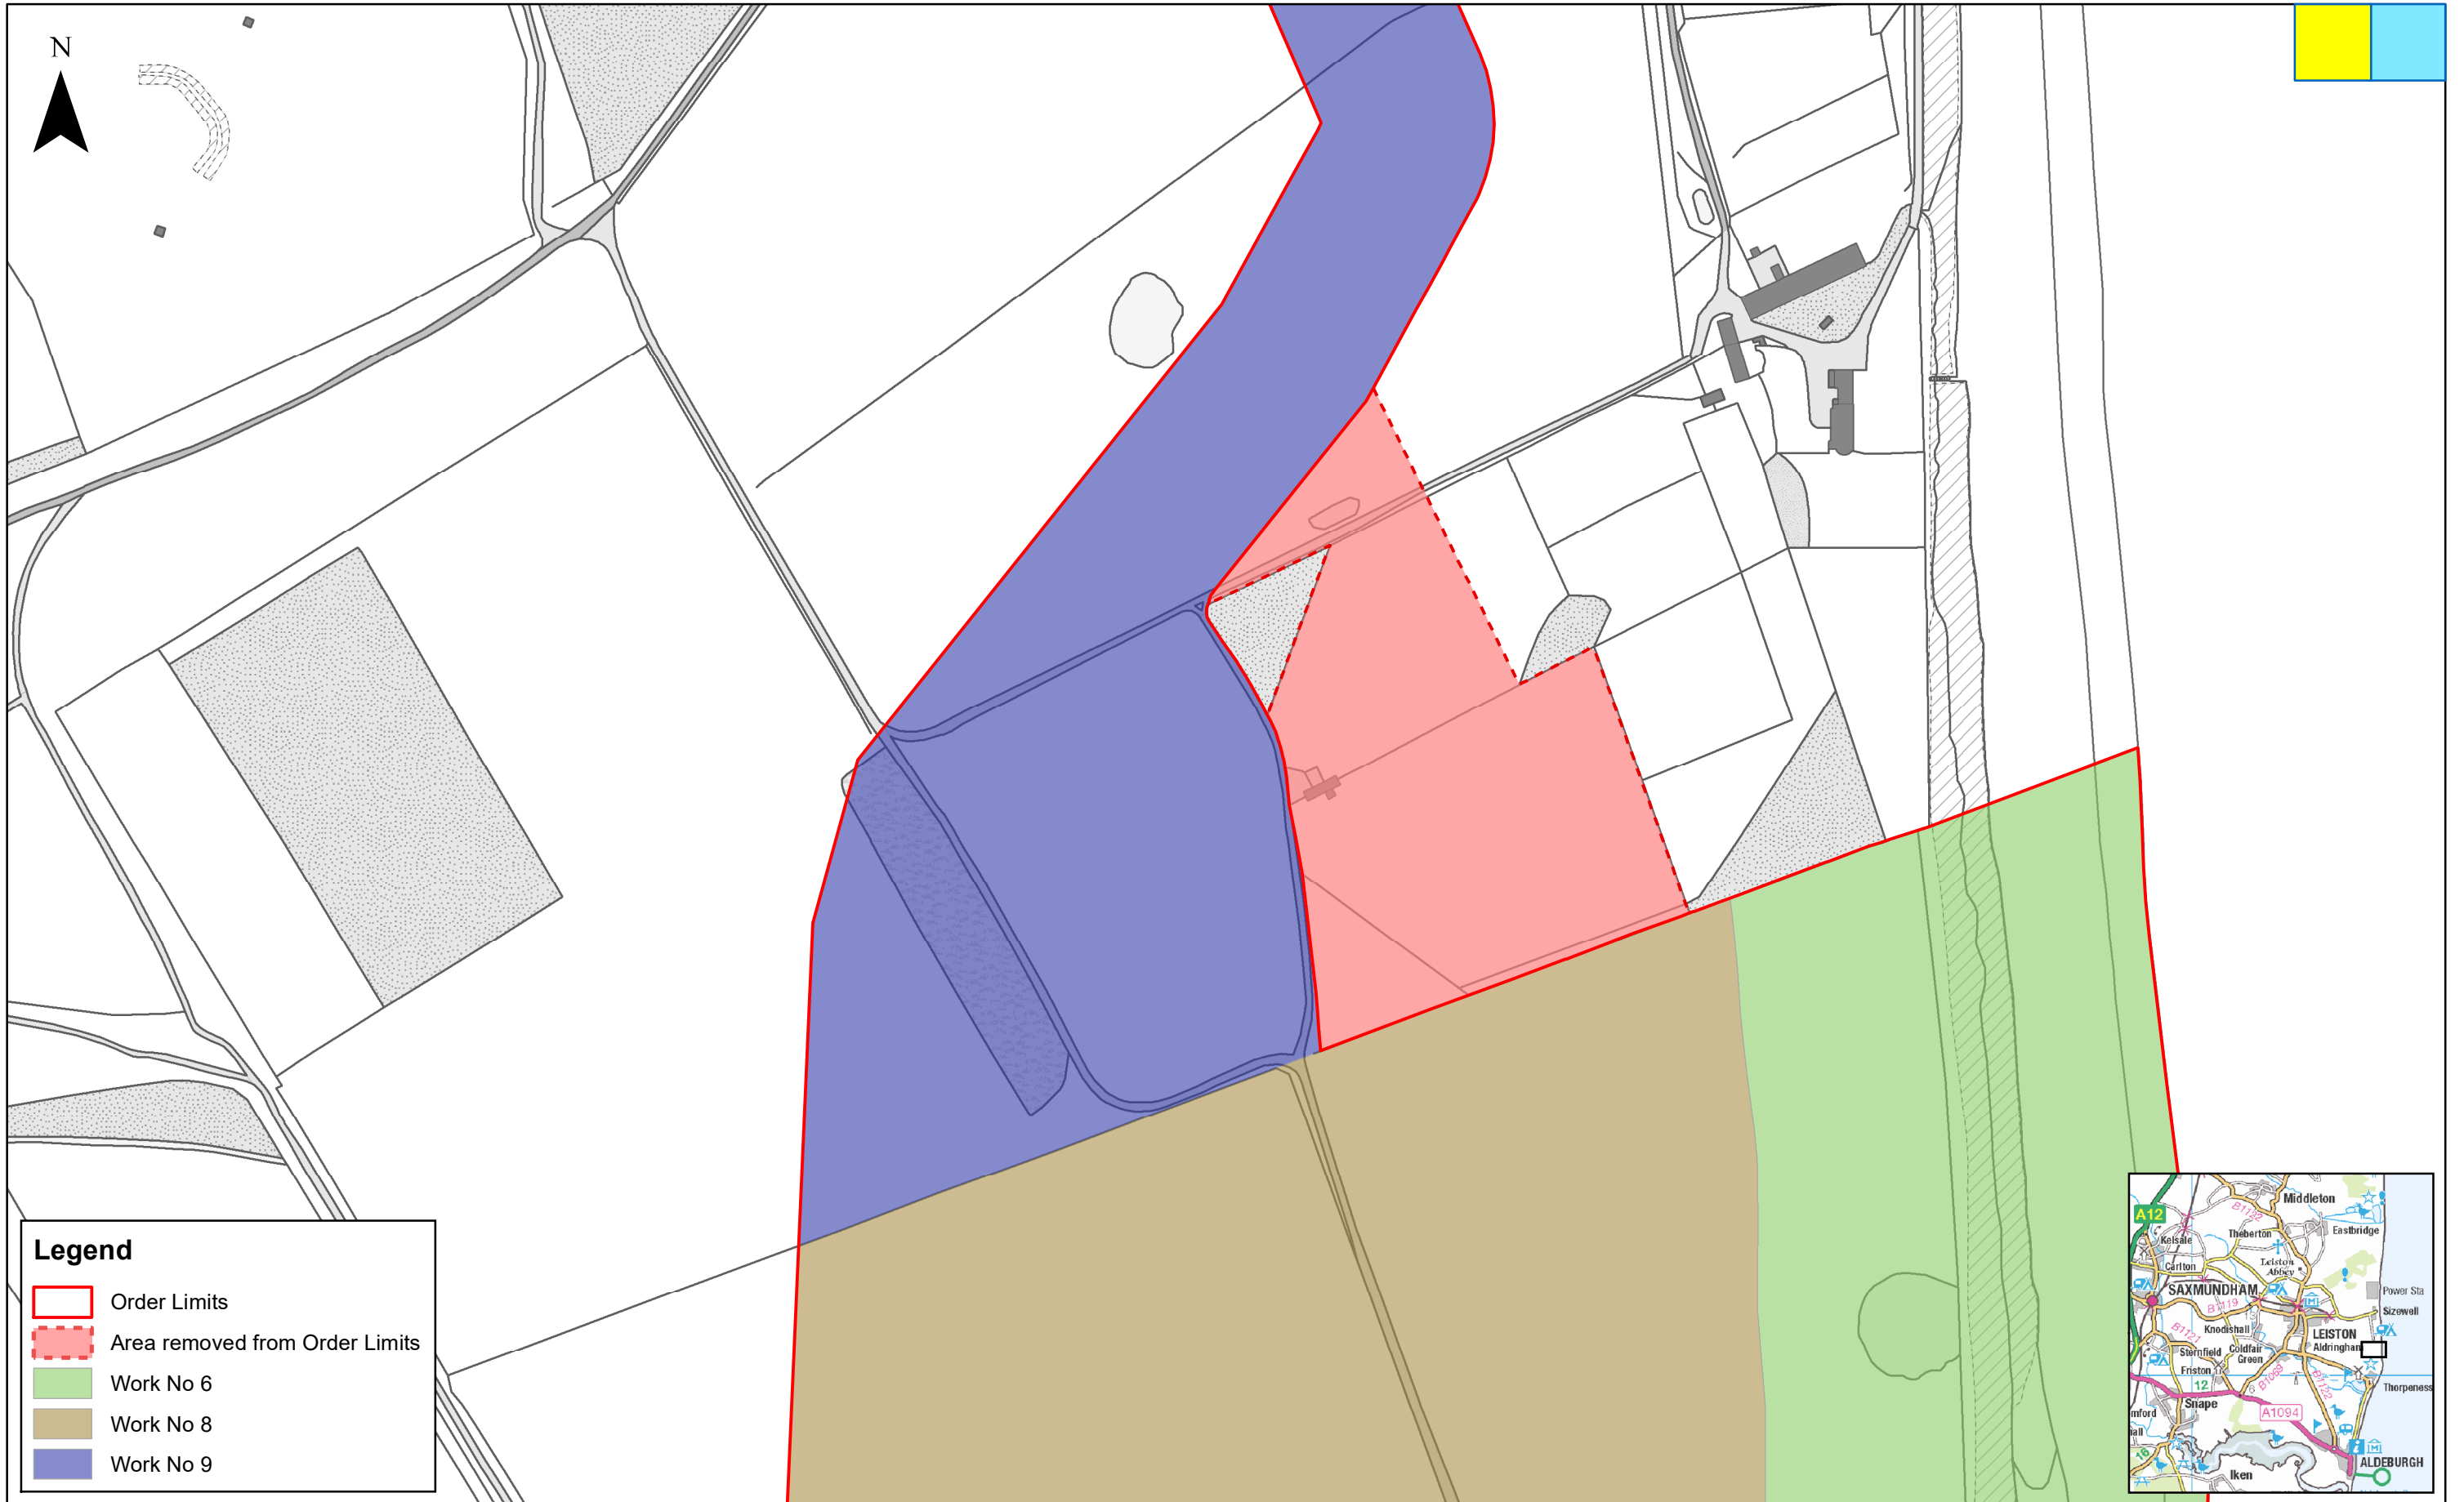

7. This reduction removes 25,087m² from the Order limits and is considered by the Applicants to be a non-material change.
8. The land plots within Work No. 9 affected by this change are as follows:
 - Plot 10: Removed in its entirety (22,630m²);
 - Plot 12: Reduction of 462m²; and
 - Plot 13: Reduction of 1,995m².
9. Those with an interest in the affected plots have been advised of this amendment.
10. Reference to Plot 10 will be removed from the next version of the draft DCO to be submitted at Deadline 12. Requirement 12(18)(e) which relates to the working width of the onshore cable route in proximity to the transition bays forming part of Work No. 8 will also be updated as the maximum working width within this area will reduce from 190m to 113m as a result of the removal of Plot 10.

1.3 Updating of Documentation

11. The following documentation has been updated at Deadline 11 to reflect this non-material change:
 - **Land plans (onshore)** (document reference: 2.2);
 - **Works plans (onshore)** (document reference: 2.3.2);
 - **Book of reference** (document reference: 4.3);
 - **Book of reference schedule of changes** (document reference: 4.3.1);
 - **Statement of reasons** (document reference: 4.1); and
 - **Funding Statement** (document reference: 4.2).
12. An updated version of the draft DCO will be submitted at Deadline 12 in accordance with the Examination Timetable and the updated version will reflect this change
