

**East Anglia One North 20023434**

**East Anglia Two 20023096**

Having listened to and read most of the evidence presented by all sides I believe that the SPR proposal is totally inappropriate for this part of Suffolk and would result in destruction of all we hold dear in these rural and semi-rural communities damaging the natural environment, our health, economy and quality of life. All the other proposed (and not yet proposed) cumulative effects would further damage the communities for ever.

I consider the only viable solution is a "Split Decision" where permission is granted for the sea based wind-farms to proceed and progress but the on-shore proposals should be refused and other options should be investigated including brown field and industrial sites. (Nearer the bulk of consumers?)

If the off-shore connection is properly coordinated to receive other connections (the technology for this exists) then the on-shore terminals can be sited in any number of appropriate areas as the connections would not need to come ashore in this coastal area at all.

Our MP Therese Coffey strongly supports this view and made an excellent speech on this.

I obviously support "green energy" in whatever form it takes but not when it is destroying peoples lives.

M C Jones
