Glossary of Acronyms

AOE	Alde-Ore Estuary
CRM	Collision Risk Model
DEP	Dudgeon Offshore Windfarm Extension Project
FFC	Flamborough and Filey Coast
GBBG	Great Black-Backed Gull
HRA	Habitats Regulations Assessment
NMC	Non-material change
SEP	Sheringham Shoal Offshore Windfarm Extension Project
SoS	Secretary of State
SPA	Special Protection Area

Glossary of Terminology

The Applicants	East Anglia TWO Limited / East Anglia ONE North Limited
East Anglia ONE North project	The proposed project consisting of up to 67 wind turbines, up to four offshore electrical platforms, up to one construction, operation and maintenance platform, inter-array cables, platform link cables, up to one operational meteorological mast, up to two offshore export cables, fibre optic cables, landfall infrastructure, onshore cables and ducts, onshore substation, and National Grid infrastructure.
East Anglia ONE North windfarm site	The offshore area within which wind turbines and offshore platforms will be located.
East Anglia TWO project	The proposed project consisting of up to 75 wind turbines, up to four offshore electrical platforms, up to one construction, operation and maintenance platform, inter-array cables, platform link cables, up to one operational meteorological mast, up to two offshore export cables, fibre optic cables, landfall infrastructure, onshore cables and ducts, onshore substation, and National Grid infrastructure.
East Anglia TWO windfarm site	The offshore area within which wind turbines and offshore platforms will be located.

1 Introduction

1. East Anglia TWO Limited and East Anglia ONE North Limited (the Applicants) are seeking consent for the East Anglia TWO Offshore Windfarm and the East Anglia ONE North Offshore Windfarm (the Projects) respectively.
2. This document is provided in response to part 6 of the Secretary of State for Business, Energy & Industrial Strategy (SoS) letter (2nd November 2021) to provide an updated Offshore Ornithology Cumulative and In-Combination Collision Risk and Displacement assessment for each of the Projects, which addresses discrepancies identified by Natural England within their Deadline 13 response (REP13-048). This document is an update to the version submitted by the Applicants at Deadline 13 (REP13-019).

2 Updates

3. The following updates have been made to the cumulative and in-combination collision risk tables within **section 4** in order to address the discrepancies identified by Natural England:
 - **Table 4** has been updated to include a figure of 28 herring gull collisions per annum for the East Anglia ONE offshore windfarm (which is now in operation) reflecting its 750MW consented design parameters as at July 2021... As discussed further under **paragraph 6** below, on the 24th September 2021, the SoS granted a non-material change (NMC) application for East Anglia ONE¹ which amended the consent to the as-built design parameters (and thus reducing collision mortalities on kittiwake, gannet and lesser black-backed gull, see **paragraph 7**). However, in the interests of working from a common understanding of the cumulative and in-combination collision mortality totals, the Applicants have not made changes to reflect the granting of the East Anglia ONE NMC. The Applicants have discussed this approach with Natural England and the Applicants understand that Natural England are comfortable with the figures presented in this document.
 - **Table 5** has been updated to correct the Hornsea Four great black-backed gull (GBBG) per annum collision figure to 16.6.

¹ Department for Business, Energy and Industrial Strategy (BEIS) (2021), Application For A Non-Material Change To The East Anglia ONE (Offshore Wind Farm) Order 2014 (SI No. 2014/1599). Available at: [REDACTED]

4. Within REP13-048, Natural England also highlighted a discrepancy between their gannet displacement abundance total and the Applicants', amounting to three extra birds. This related to the Hornsea Project Three displacement abundance estimate in the spring migration season (as noted by Natural England in REP12-090) and was addressed by the Applicants in REP13-019. Therefore, there is no requirement to further update these figures. However, for ease of reference, the gannet displacement abundance table (**Table 6**), together with tables for all other species, have been provided within this document. Therefore, for the avoidance of doubt, only the herring gull (**Table 4**) and the GBBG (**Table 5**) figures have been amended from the version (REP13-019) submitted by the Applicant at Deadline 13.

3 Assessment Conclusions

5. Notwithstanding the potential addition of Hornsea Project Four and the Sheringham and Dudgeon Extensions to the cumulative and in-combination totals, the Applicants maintain that given the many layers of precaution within the assessments, the changes described within this cumulative and in-combination collision risk update do not alter the conclusions of negligible to minor adverse significance (for the EIA) and no Adverse Effects on Integrity (for the HRA) within the assessments submitted (**Chapter 12 Offshore Ornithology** (APP-060) and the **Information to Support Appropriate Assessment Report** (APP-043)).
6. Project-alone collision mortalities for both Projects are already small when compared to other projects of a similar scale. These numbers have been further reduced from those submitted with the Projects' DCO applications following the increase in draught height for the Projects (as discussed in **Offshore Ornithology Cumulative and In Combination Collision Risk Update - Rev-01** (REP1-047)).
7. Furthermore, on the 24th September the SoS granted a NMC application for East Anglia ONE. The changes to the windfarm design, reflecting the as-built windfarm, have very substantially reduced the predicted collision impacts, for example by up to 85% for kittiwake, 76% for gannet and 62% for lesser black-backed gull². In terms of the predicted mortalities of these species attributed to SPA populations, the mortality of Flamborough and Filey Coast SPA gannets would be reduced by 7.7 individuals and kittiwake by 10.2, and Alde-Ore Estuary SPA lesser black-backed gull by 2.3. These reductions would therefore offset almost 30% of the Projects' gannet mortality (7.7 of 26.3), all of the lesser black-

[REDACTED]

[REDACTED]

[REDACTED]

backed gull mortality (2.3 compared to 1.9) and over 7 times the kittiwake mortality (10.2 compared to 1.5). However, as this change was not requested by the SoS and in the interests of working from a common understanding of the cumulative and in-combination collision mortality totals, the Applicant has not made changes to this document to reflect the granting of the East Anglia ONE NMC.

4 Updated Cumulative and In-Combination Collision Risk and Displacement Abundance Tables

8. This update follows a similar approach to the Deadline 13 update, whereby the Applicants have included summary rows which include all projects previously agreed at Deadline 8 of the Norfolk Boreas examination (which is the agreed position with Natural England), with the inclusion of Hornsea Project Three (using Natural England agreed figures). The projects for which preliminary environmental information reporting (PEIR) is available (Dudgeon Extension and Sheringham Extension (DEP and SEP)) and Hornsea Project Four (recently accepted for examination)³ are then included individually and altogether in a grand total for all windfarms in the tables.
9. It should be noted that for Hornsea Four, the figures are those presented in their PEIR (as per REP13-019), because an update to the Hornsea Project 4 application figures was not requested by the SoS. In addition, it is recognised that the figures for Hornsea Project Four may change during the course of that project's examination. However, it should be noted that in all cases the collision and displacement risks presented in the Hornsea Project Four final application are lower than the preceding PEIR values. Therefore, the cumulative and in-combination totals presented below all represent worst case, precautionary estimates.
10. The amendments made are highlighted by yellow cells in the tables below.
