Dear Sir,

I am writing to once again beg that you do not allow the building of Substations for the above on the edge of our beautiful village Friston, destroying the tranquillity and beauty of the area we call home.

We are not against wind energy, but we are against the way in which it is proposed to be brought onshore and where.

There are alternative, brownfield sites.

This substation will bring so much destruction to our countryside, wildlife and our tourism economy, over many years to bring the power onshore... how can the energy be truly GREEN if it destroys the most beautiful part of our countryside to bring it ashore?

Please don't let this happen here!

yours sincerely

Toni Revan
