Dear Secretary of State and planning Inspectorate

Re: PINS Ref EA1N - EN010077 and EA2 ENO010078

It is beyond comprehension why you as Secretary of State together with the Inspectorate are considering the above application:

- the cable route makes a complete mockery of the fragile coast it will damage with serious repercussions to the AONB, SSSI and SPA in the area. The size of the unnecessary trenches for the cables is enormous and will cause everlasting damage to the area and wild life.

- the National Grids proposed expansion plan will mean that thousands of acres will be polluted by the substations.

- Suffolk coastal destination management organisation's research on the damage to the main employment i.e. tourism in the area makes it perfectly clear that this huge and destructive power plant all over the area will destroy jobs and livelihoods for a generation, if it will ever comeback.

- noise and light pollution will be huge, beyond that suffered in cities and for what reason, to promote a green energy. It doesn't make sense, why is this government causing a huge area to be blighted when a ring main around the U.K., bringing the energy where it is needed using brown field sites could and should be used.

No one is against sustainable energy but not at the huge cost and pollution that this scheme will cause. It makes a mockery of this government's zero carbon policies.

Yours faithfully

S. Thompson
