Dear Sirs

I am writing again to put forward my opposition to the building of further wind farms that will use the area at Sizewell and its surroundings as substations and providing the infrastructure for such projects. As someone who lives and loves the Suffolk coastal stretch and villages and landscape that make it such a unique and beautiful part of the UK, I am horrified to think that much of the nature and habitat around our home will be destroyed by the building of these wind farms. It is not that I don't believe in a greener energy production, but to the destruction and detriment of my local area seems both unfair and criminal. I oppose the choice of location for the grid connection, onshore substations and cable corridors as a local homeowner who intends to live in Suffolk for the rest of my life, I have huge concerns over the proposed building of new wind farm substations and infrastructure that will destroy beautiful landscape and create noise, traffic and damage to the local area- not only will this be of vast negative impact to the local tourist economy, but more importantly a permanent scar on the landscape and damage to wildlife.

Please can you take into consideration my comments, which are of huge concern to me,

Yours faithfully

Tanya Ritchie
