Dear Sir,

East Anglia One North and East Anglia Two Offshore Windfarms – deadline 6

Anglian Water has previously made relevant representations and written representations on the above applications. The Examining Authority had asked that we confirm our position in relation to the above applications following the compulsory acquisition hearing.

Protective provisions for Anglian Water as requested have been included in the submitted DCOs which require our consent for any works in the vicinity of our existing water recycling assets to ensure we can continue to serve our customers. Therefore, we are supportive of the wording of the Draft DCO as submitted.

We understand that there is potentially a requirement for a foul connection to the public sewerage network to serve the substations for the above projects. The applicants are to seek further advice from Anglian Water relating to any wastewater requirement once further information is available. This would be prior to a formal application(s) being made to Anglian Water to connect to the public sewerage network.

An agreed Statement of Common Ground is to be submitted to the Examining Authority on behalf of both parties. Therefore, Anglian Water is writing to confirm that there are no outstanding matters in respect of the above applications.

Should you have any queries for Anglian Water please let me know.

Yours sincerely

Stewart Patience
Spatial Planning Manager, MRTPI
