Dear Mr Smith

I would like to draw your attention to the attached article that appeared in yesterday's East Anglian Daily Times the link to the article is: <https://www.eadt.co.uk/news/cairn-built-on-thorpeness-beach-7830152> If you read this article you will read that [REDACTED] was able to construct this cairn using material gathered from the corraline crag following 2 days of storms. I believe that this indicates how fragile the corraline crag is?

Following on from today's Compulsory Acquisition Hearing and mention of Broom Covert, I would like to draw your attention to the fact that the possible site for Nautilus Interconnector is at the Leiston airfield, which is 6 mins by car from Broom Covert. May I suggest that SPR/National Grid should explain why this site isn't being given serious consideration? It is a very large area.

With best wishes

Sheridan Steen

Stunning traditional cairn built by hand on Suffolk beach
