Dear Sirs,

I live on [REDACTED]. Over the last couple of days we have seen road traffic signs being put out at Thorpeness and other locations.

The signs state "Slow ...Works Access ahead..."

Coming out of my property this morning I now find these signs are on Grove Road too, I was somewhat annoyed to see one of the signs had been placed on our grass next to the road.... no one has asked us for permission to place it there, no one has sent us any notice of this happening! The only notice I have seen was pinned to a wooden stake further up the road where it leads to a public footpath.

See pictures below...

I really do feel that SPR are somewhat jumping the gun here as they have not been granted permission for any substations yet!

All this so called " ground work" investigations should not be happening. Just thought that you might be interested in this.

To me it's just another example of SPR having absolutely no respect for the residents who are being deeply affected by all the events surrounding their application for these substations.

Regards

Mrs C. Munden

East Anglia TWO and ONE North Onshore Ground Investigation Works

Ground investigation works are planned to take place across the East Anglia TWO and ONE North onshore development area between March and August 2021.

These advance surveys are necessary to feed into the cable route and substation design and to gain a better understanding of the environmental mitigations required should the DCO application be successful, as well as to aid with the timely delivery of renewable energy to the area.

This process of early investigations is routine to support the design and suitable mitigation for the development should consent be granted and all works have been carefully planned to work closely with the ecological team and will only take place with their approval.

The investigations will take place at various locations along the proposed 9km cable corridor and at the substations site. No investigations will take place within the Leiston-Aldeburgh Site of Special Scientific Interest (SSSI) or Sandlings Special Protection Area (SPA) during the bird nesting season.

Boundaries within which work is permitted will be marked-out on the ground within the proposed development area and all work is being undertaken with the permission of the relevant landowners.

Scottish Power Renewables (SPR) recognises the critical importance of the local environment. In planning the ground investigation, the locations around the site have been chosen to minimise disturbance to the people, places and landscape within which the investigation will take place. No works are planned on Public Rights of Way and no diversions to them are planned. However, they may be used for access to and from the site.

Please visit the Latest Updates area on the ScottishPower Renewables website for further details on these investigation works or get in touch with the East Anglia TWO and ONE North Stakeholder Team.
