

Interested Parties ref 20023298 & 20023299

Dear Sirs

Over the last few days there have been many "works access ahead" signs appearing in our local area and in particular on the grass in front of my property where I live in Grove Road!

I had no notification of these works other than a notice on a wooden post at a footpath!

I would like to ask the Inspectorate if SPR have the authority to carry out this work prior to any decision on the outcome of your findings / recommendations?

This is another example of SPR having no regard for the local residents.

I would also add that I am very disappointed that the Examination into these two (in my view) flawed projects has been extended by a further 3 months prolonging the worrying time for all those in the area!

Regards

Tony Munden

East Anglia TWO and ONE North Onshore Ground Investigation Works

Ground investigation works are planned to take place across the East Anglia TWO and ONE North onshore development area between March and August 2021.

These advance surveys are necessary to feed into the cable route and substation design and to gain a better understanding of the environmental mitigations required should the DCO application be successful, as well as to aid with the timely delivery of renewable energy to the area.

This process of early investigations is routine to support the design and suitable mitigation for the development should consent be granted and all works have been carefully planned to work closely with the ecological team and will only take place with their approval.

The investigations will take place at various locations along the proposed 9km cable corridor and at the substations site. No investigations will take place within the Leiston-Aldeburgh Site of Special Scientific Interest (SSSI) or Sandlings Special Protection Area (SPA) during the bird nesting season.

Boundaries within which work is permitted will be marked-out on the ground within the proposed development area and all work is being undertaken with the permission of the relevant landowners.

Scottish Power Renewables (SPR) recognises the critical importance of the local environment. In planning the ground investigation, the locations around the site have been chosen to minimise disturbance to the people, places and landscape within which the investigation will take place. No works are planned on Public Rights of Way and no diversions to them are planned. However, they may be used for access to and from the site.

Please visit the Latest Updates area on the ScottishPower Renewables website for further details on these investigation works or get in touch with the East Anglia TWO and ONE North Stakeholder Team.
