Scottish Power continues to ignore the considerations of the local community. SPR has led a disingenuous campaign from the start taking no account of local concerns and objections and how these works will destroy this part of Suffolk, its quiet rural beauty, its ancient woodlands, natural habitats and the life of its communities.

Recently, local residents have been alarmed to see SPR starting work in the area giving the impression the plans have been approved which is not the case.

We are not challenging the offshore location of the wind projects but we do challenge the proposed onshore infrastructure location.
