Re: DCO determination for the Norfolk Vanguard offshore wind farm

Dear Mr. Kwarteng,

I am writing to you with regard to the Norfolk Vanguard redetermination process (email dated 29-04-21). I would like to provide a response to the three points of Paragraph 8 of the letter (reference EN010079).

You asked for responses on three question:

| | |
|--|---|
| 1. The procedure you intend to follow. | I do not feel this is the correct procedure to follow, we need an honest review of the situation. |
| 2) Whether as part of that procedure, he should ask the Planning Inspectorate to reopen the examination to consider the cumulative landscape and visual impacts at Necton: | The Planning inspectorate should be asked to reopen the examination, this would ensure a fair review of the cumulative effects to the landscape. |
| 3) Whether Interested Parties agree with the Secretary of State's assessment of the situation set out at paragraph 6 of letter EN010079 regarding the additional materials that will put him in a better position to make the assessment of cumulative landscape and visual impacts in the redetermination of the Norfolk Vanguard application and whether Interested Parties consider there to be any further documents submitted as part of the Norfolk Boreas examination that would be helpful in this regard: | How do you intend to ensure that the design review is followed and what penalties are there if it is not complied with? Renewable energy is the future but this can't be at any cost. |

Thank you for your consideration.

Yours sincerely,
Roberta Flexen Née Spain
