To whom it may concern,

This is a written representation submitted by ScottishPower Renewables (SPR) on behalf of East Anglia Two Limited and East Anglia One North Limited (“the Project Companies”).

SPR (on behalf of the Project Companies) wishes to participate in the Examination of the Development Consent Order (DCO) application for Hornsea 3 Offshore Wind Farm. SPR is particularly interested in the cumulative and in-combination assessment presented within the application and the associated predicted cumulative effects.

SPR would like to highlight that Under ‘Energy Projects – Temporal’ of the Cumulative Effects Screening Matrix given in Volume 4, Annex 5.2 – Cumulative Effects Screening Matrix (PINS Document Reference: A6.4.5.2) of the Hornsea 3 Offshore Wind Farm Environmental Statement, incorrect timescales are given for the offshore construction of both the proposed East Anglia TWO wind farm and proposed East Anglia ONE North wind farm. The offshore construction timescales given in the aforementioned Hornsea 3 document and the offshore construction timescales that will be included in SPR’s DCO applications are given in **Table 1** below:

Table 1. Construction timescales

SPR Project	Construction timescales given in Hornsea 3 Cumulative Effects Screening Matrix	Indicative construction timescales that will be included in the impact assessment
East Anglia TWO	2023 to 2025	2025 to 2027
East Anglia ONE North	2021 to 2022	2026 to 2028

SPR requests that the Examining Authority treat SPR as an Interested Party for the purposes of the Examination. SPR reserve the right to make further comments through the Examination process.

Yours Sincerely,

Richard Morris
Head of Offshore Development UK
ScottishPower Renewables
