 Application EN010080

 Date:
 14 April 2020 16:06:41

We would formally like to put our objections ref the above application REF:HOW03 E1AReg17 11032020 681897

As the only residential property affected pre and post construction of the converter station we have no option but to object

The trench digging will be traumatic for the countryside and people living on the route but will be covered over. We will be left with the converter stuck in the middle of an agricultural field impacting on every view from our garden and house.

The landscaping being suggested will take many 10s of years to be of any affect and will be of no benefit to us

We have for over 16 years and so we were proposing to put our house on the market this year but we have no chance of selling with this construction going on and feel we have now been imprisoned for the next 10 years plus.

When we purchased our house we made inquires at South Norfolk Council with regards to potential planning around our property- they stated that there was no way any plans would be passed between us and the bypass for any construction work. This obviously was not the case

Whilst we are not against wind farms I don't believe that people really know the impact on the countryside when it is tracked so far in land. I do not understand why it cannot just come into Gt Yarmouth which has the infrastructure to cope with it.

Also there is another wind farm project(Sheringham Shoal project) proposing to construct an additional converter in Swardeston- so we feel this is opening the door for more construction work.

The B1113 which is already very busy is not big enough to take the lorries for construction and will cause major problems

We would propose that Orsted purchases our property- we have asked and they have said NO. Orsted are on record as saying it will not impact on the value of our property and that there is no evidence of this. We have estate agents valuations suggesting differently
