Dear Sir, i apologise for missing the deadline 3 due to Internet problems again and i had to get feedback during this week and after our parish meeting in Hensall-there was a number of points raised which if i may would share with you.

The demolition of the coal fired station-the latest from the applicant was that if any part would be reused then it would effect how much would be removed ,early this year i attended update meetings along with other PC cllrs.from Eggborough and the applicant announced that the demolition will start 18 months 1st stage to remove oils ,asbestos and residual coal and 3 further years for demolition - we all took that in good faith so now it has changed.

There is no maps to put into lay mans terms of the emissions spread,audible range,disbursement/spread of steam plumes it is very difficult to explain and interpret the data to residents.

It has not been made clear if there is a limit when emissions are too high if the new plant would shut down or take emergency action to reduce them, the prospect of constant injection of ammonia is a worry.

There is scant information as to how much pollution[diesel fumes,dust,heavy plant noise and the like] will be generated during construction activities.

This week on two occasions hensall village suffered water pressure drops for long periods due to as i understand the power station taking on water resulting in ,do i presume this will be a regular occurrence we had no warnings.

When the installation of the gas and modifications of the water pipes starts will the applicant reassure residents that when going under the river[some areas are pile driven]there will be protection against any sink holes appearing and collapse thereby causing flooding ,it is extremely contentious at this time as we have had several incidents of sink holes appearing in the flood banks and elsewhere exacerbated by UK coal mining under the whole village dropping the strata by 2 meters.

There is still much concern what will happen to gale common and also what will be built in place of the coal fired plant .

Kind Regards Bob Tams PC cllr.
