Deadline 7 – Rare Bird Sighting

Dear Hefin,

On behalf of GREAT I would like to make the ExA aware of a rare bird sighting at Graveney Marshes on 30 October 2019. A desert wheatear was sighted on the sea wall next to the marshes which resulted in a flurry of activity and interest over the following days.

Details of the sighting can be found at

http://www.rarebirdalert.co.uk/RealData/gallery_show.asp?galleryid=68376

Details of the desert wheatear can be found at <https://avibirds.com/desert-wheatear/>

This is another example of the variety of birds that currently use this area which may be lost if the solar park and battery storage facility is approved.

Kind regards,

Marie
